This Book is brought to you for free and open access by the Catalogs at Scholarship Repository @ Florida Tech. It has been accepted for inclusion in Florida Institute of Technology Melbourne and Jensen Beach Catalogs, 1967-2015 by an authorized administrator of Scholarship Repository @ Florida Tech. For more information, please contact khefner@fit.edu.
Choosing the right university is one of the most important decisions you will ever have to make. Your university experience will do more than provide you with a higher education. It will shape your life in ways that will surprise you. In addition to making friends and memories while at Florida Institute of Technology, you will also lay the foundation for a lifetime of learning and achieving. Your career begins here.

The university you choose must provide the best possible learning and living environment. We believe Florida Tech does this through small class sizes, world-class faculty, and undergraduate research options that may begin as soon as your freshman year.

With these thoughts in mind, I welcome you to the community of scholars at Florida Tech. We take your education personally.

Best regards,

Anthony J. Catanese, Ph.D., FAICP
President

Florida Institute of Technology has become known worldwide as a premier technological university with a sincere interest in each and every student who attends.

The university has been built by dedicated, expert faculty and offers the ultimate learning experience available through individual attention in both the classroom and research laboratories.

The university grew out of the space program and continues to emphasize mankind’s thirst for discovery and knowledge. Since its founding in 1958, more than 49,500 students have earned degrees at Florida Tech.

We are pleased to welcome you to the Florida Tech family and wish you the best in all your endeavors at Florida Institute of Technology.

Sincerely,

Gordon L. Nelson, Ph.D.
Vice President for Academic Affairs

Mission Statement

Florida Institute of Technology is an independent technological university that provides quality education, furthers knowledge through basic and applied research, and serves the diverse needs of our local, state, national and international constituencies.

In support of this mission, we are committed to:

• An organizational culture that values and encourages intellectual curiosity, a sense of belonging and shared purpose among faculty, students and staff, and pursuit of excellence in all endeavors;
• Recruiting and developing faculty who are internationally recognized as educators, scholars and researchers;
• Recognition as an effective, innovative, technology-focused educational and research institution;
• Recruiting and retaining a high-quality, highly selective and culturally diverse student body;
• Continued improvement in the quality of campus life for members of the university community;
• Providing personal and career growth opportunities for both traditional and nontraditional students and members of the faculty and staff, including those who avail themselves of Florida Tech University Online;
• Professional accreditation for all appropriate programs.

Executive Council

President
Anthony J. Catanese, Ph.D., FAICP

Executive Vice President and Chief Operating Officer
T. Dwayne McCay, Ph.D.

Senior Vice President and Chief Development Officer
Kenneth P. Stackpoole, Ph.D.

Senior Vice President and Chief Financial Officer
Joseph J. Armul, M.P.A., CPA

Write to Florida Institute of Technology,
150 West University Boulevard, Melbourne, FL 32901-6975

By e-mail admission@fit.edu (Undergraduate Admission) or Grad-Admissions@fit.edu (Graduate Admissions)
for cause, there will be no refund of tuition and fees paid. If a dismissed student has paid only a part of the tuition and fees, the balance due the university will be collected.

There will be no refund of tuition, fees or other payments made in the event the operation of the university is suspended as a result of any act of God, strike, riot, disruption or for any other reason beyond the control of the university.

Florida Institute of Technology does not discriminate on the basis of race, gender, sexual orientation, Vietnam-era veterans status or any other discrimination prohibited by law in the admission of students, administration of its educational policies, scholarship and loan programs, employment policies, and athletic or other university-sponsored programs or activities.

This catalog contains current information regarding curricula, educational plans, offerings and requirements of the colleges and schools, including the Graduate School, and may be altered from time to time to carry out the purposes and objectives of the university. The provisions of this catalog do not constitute a contract between the university and the enrolled student. The university reserves the right to change any provision, offering, requirement or fee at any time.

A student may be required to withdraw (under appropriate procedures) whenever it is deemed to be in the best interest of the student and/or the university. The university may impose probation on any student whose conduct is unsatisfactory. Any admission based on false statements or documents presented by the student is void when the fraud is discovered, and the student is not entitled to credit for work that may have been completed. When a student is dismissed or suspended from the university...
INSTITUTION OVERVIEW

ORGANIZATION

Florida Institute of Technology is an accredited, coeducational, independently controlled and supported university. It is committed to the pursuit of excellence in teaching and research in the sciences, engineering, high-tech fields, business, psychology, liberal arts, aviation and related disciplines, as well as providing the challenges that motivate students to reach their full academic and professional potential. Today, over 8,985 students are enrolled in programs on and off campus, and online. More than 3,500 students attend class on the Melbourne campus and more than 1,250 at Florida Tech’s off-campus sites, while more than 4,000 students are enrolled in online programs. Florida Tech offers 185 degree programs in science, engineering, aviation, business, education, humanities, psychology and communication. Included are doctoral degrees offered in 22 disciplines and 83 degrees at the master’s level.

Because of the moderate size of the student body and the university's dedicated faculty and staff, a student at Florida Tech is recognized as an individual. Acting as individuals or as members of student organizations, students are encouraged to express their opinions on ways in which academic programs and student life might be made better for all. An active student government and student court play a meaningful part in matters affecting student life.

Many students enrolled in graduate programs, as well as undergraduates, take part in sponsored research programs and make significant contributions to project results. Florida Tech houses a number of research institutes and centers that, in collaboration with academic departments, aid in the students' training. These institutes and centers are described more fully under “Research: Institutes, Centers and Major Laboratories” in this section.

The university is organized into five academic units: the College of Aeronautics, Nathan M. Bisk College of Business, College of Engineering, College of Psychology and Liberal Arts and College of Science.

The College of Aeronautics offers associate's degrees for each flight degree program, bachelor's degrees in aeronautical science, aviation management, aviation meteorology (with fixed- and rotary-wing flight available in each program) and aviation computer science, and master's degrees in airport development and management, applied aviation safety and aviation human factors.

The Nathan M. Bisk College of Business offers online associate's degrees in accounting, business administration, computer information systems and healthcare management; bachelor's degrees on the Melbourne campus in accounting, business administration, business and environmental studies, information systems, international business, marketing and sports management, and online in accounting, business administration and computer information systems. The master of business administration is offered on the Melbourne campus, at off-campus sites and through Florida Tech University Online in a variety of specialized areas. The master of science in information technology is also offered online. Degrees offered off-campus through the Extended Studies Division, consisting of ten sites located in five states, provide a number of specialized master's degrees in addition to the bachelor of science in logistics management and master of business administration. Extended Studies Division students may also take some of their courses online through the division’s Virtual Campus.

Degree programs offered by the Extended Studies Division include acquisition and contract management, business administration, computer information systems, human resources management, information technology, logistics management, management, materiel acquisition management, project management, quality management, space systems, space systems management and systems management.

The College of Engineering includes seven departments: chemical engineering, civil engineering, computer sciences, electrical and computer engineering, engineering systems, marine and environmental systems, and mechanical and aerospace engineering, and the School of Computing, home to the applied mathematics department that advises on all undergraduate mathematics courses. Programs offered in addition to those included in the department names are biological oceanography, chemical oceanography, coastal zone management, construction management, earth remote sensing, engineering management, environmental resource management, environmental science, geological oceanography, meteorology, ocean engineering, physical oceanography and software engineering.

The College of Psychology and Liberal Arts includes the School of Psychology, Department of Humanities and Communication, the Division of Languages and Linguistics, and military science (Army ROTC). Florida Tech offers two- and four-year Army ROTC programs to interested, qualified students. Students may qualify for a reserve commission in the U.S. Army through normal completion of both the college basic and advanced cadet programs, or may enter directly into the advanced program after completing their basic program requirements before entering the university.

The college offers bachelor's degrees in communication, humanities, psychology and forensic psychology, and master's degrees in applied behavior analysis, industrial/organizational psychology, organizational behavior management, and technical and professional communication. Doctoral degrees are awarded in behavior analysis, clinical psychology and industrial/organizational psychology. In addition to these programs offered on campus, the college offers associate's degrees in liberal arts and criminal justice, and bachelor's degrees in applied psychology and criminal justice through Florida Tech University Online.

The College of Science is composed of the departments of biological sciences, chemistry, mathematical sciences, physics and space sciences, and science and mathematics education. Bachelor's degrees are offered in all of these areas and in biochemistry, biomathematics and interdisciplinary science. Master's degrees are offered in applied mathematics, biochemistry, biological sciences, chemistry, computer education, environmental education, interdisciplinary science, mathematics education, operations research, physics, science education, space sciences and teaching. Advanced degrees include the Specialist in Education, and doctoral degrees in applied mathematics, biological sciences, chemistry, mathematics education, operations research, physics, science education and space sciences.
Florida Tech University Online is the partnership between Florida Tech and University Alliance, whose mission is to prepare adult students, wherever they may be, for rewarding and productive professional careers in a work environment that is increasingly global in scope, driven by rapidly changing technology and focused on quality. In pursuit of this mission, Florida Tech University Online seeks to provide students with the finest possible education using the most appropriate delivery technology. Florida Tech University Online offers an education reflective of current best practices and taught by instructors who are fully qualified academically and by the virtue of professional practice. The partnership provides nontraditional students invaluable online access to a quality education.

Through the partnership, Florida Tech brings the classroom to the student with instructor-led, interactive programs that offer the same high-quality programs online that are offered to on-campus students. Associate’s, bachelor’s and master’s degrees can be earned anytime, anywhere. Partnership with University Alliance provides classes via state-of-the-art interactive delivery and a better-than-live learning experience. The superior interactive delivery allows easy work–life balance with the ability to schedule classes around a busy lifestyle. No actual classroom attendance is ever required in order to receive the same degree as on-campus students, with the option to participate in the Melbourne campus commencement exercises.

Accreditation and Memberships
Florida Tech is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award associate, baccalaureate, master’s, education specialist and doctoral degrees. Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call (404) 679-4500 for questions about the accreditation of Florida Tech. The commission requests that they be contacted only if there is evidence that appears to support an institution’s significant non-compliance with a requirement or standard.

The university is approved by the Office of Education of the U.S. Department of Education.

The university is a member of the Independent Colleges and Universities of Florida, the American Council on Education, the College Entrance Examination Board and the American Society for Engineering Education.

The undergraduate programs accredited by the Engineering Accreditation Commission of ABET are aerospace engineering, chemical engineering, civil engineering, computer engineering, electrical engineering, mechanical engineering, ocean engineering and software engineering. The undergraduate computer science program is accredited by ABET’s Computing Accreditation Commission.

The undergraduate programs in education approved by the State of Florida Department of Education are biology education, chemistry education, earth/space science education, mathematics education, middle grades general science education and physics education.

The undergraduate program in chemistry is accredited by the Committee on Professional Training of the American Chemical Society. Students may obtain ACS-certified degrees by following a prescribed curriculum.

The aeronautical science, aviation computer science and aviation management programs are accredited by the Aviation Accreditation Board International (AABI).

The Doctor of Psychology, Clinical Specialization, is accredited by the American Psychological Association. The graduate program in applied behavior analysis is fully accredited by the Association for Behavior Analysis International (ABAII).

Operation and Control
Florida Tech was granted a charter as a nonprofit corporation by the State of Florida in December 1958. The corporate charter established the school as an independent institution of higher learning with academic programs leading to undergraduate and graduate degrees. The charter ensures that the university will be coeducational in character and that admission will be open to all qualified applicants regardless of race, gender, color, religion, creed, national origin, ancestry, marital status, age, disability, sexual orientation or Vietnam-era veteran status. Under the corporate charter, control of the university is vested in a self-perpetuating board of trustees. Members of the board are selected based on outstanding ability, integrity and personal interest in the development and preservation of the university.

The university is in compliance with the Americans with Disabilities Act. Florida Tech provides access to higher education for persons with disabilities through the office of Academic Support Services. Individuals are encouraged to contact the office at (321) 674-7110 to obtain information about the process of registering for accommodation and services.

History
Founded in 1958 as Brevard Engineering College by Dr. Jerome P. Keuper, Florida Tech initially offered continuing education opportunities to scientists, engineers and technicians working at what is now NASA's John F. Kennedy Space Center. The new college grew quickly, paralleling the rapid development of America’s space program. The college, dubbed by the media as the “night school for missile men,” gained international attention, including a visit from legendary rocket scientist Wernher von Braun.

In 1966, the college changed its name to Florida Institute of Technology to acknowledge its growing identity as a scientific and technological university, the only such independent institution in the Southeast.

From the beginning, Florida Tech has been committed to excellence in graduate education. A 1962 New York Times article described Brevard Engineering College as “the only space engineering college in the country … its graduate course offers engineers the opportunity to obtain a master’s degree and keep up with the advancement taking place daily at the Cape.”

At the time of the article, all of the college’s graduate students worked on America’s race to space during the day and attended classes at night. Today, as the university has evolved, nearly 60 percent of on-campus graduate students attend and do research full time.

The university moved to its current Melbourne campus in 1961, and construction began immediately on administration and classroom buildings to augment existing buildings on the site.
Before the decade’s end, the university would break ground on its first million-dollar building, the Crawford Science Building.

In the 1990s the university added new facilities valued at nearly $50 million with construction of the F.W. Olin engineering, science and physical science buildings and the Charles and Ruth Clemente Center for Sports and Recreation. In 2009–2010 the university was supervising $75 million in new projects. New buildings completed by the end of calendar year 2009 included the Emil Buehler Center for Aviation Training and Research, Ruth Funk Center for Textile Arts, Scott Center for Autism Treatment and Harris Center for Science and Engineering. The new food service area, parking structure and aquatic center opened in winter 2010.

Since 1958, when 154 students signed up for the first fall semester, more than 49,500 degrees have been earned by students at Florida Tech. As the institution advances and the alumni ranks multiply, the university remains dedicated to developing concerned scientists, aviators, engineers and business leaders who will change the world.

**CAMPUS ENVIRONMENT**

Florida Tech’s campus is located in Melbourne, a residential community on Florida's Space Coast. The area offers a delightful year-round subtropical climate and inviting ocean beaches. The campus is within an hour’s drive from the entertainment areas in Central Florida and is part of the high-tech corridor.

The university's location gives it a unique place in the academic world. Corporations whose scientists and engineers are making tomorrow’s technological breakthroughs for the U.S. space program surround the Kennedy Space Center. The space center's proximity allows easy interaction between space center personnel and the university community. Moreover, the growing number of high-tech, innovative businesses and industries in the Melbourne area help to make Florida’s business environment one of the most promising and exciting in the nation, and enables university professors to stay abreast of the latest challenges and developments in the scientific, technical and business worlds. With both the Indian River Lagoon and the Atlantic Ocean nearby, students in the oceanography, aquaculture, environmental science and marine biology programs have ready access to the beaches and waters for a variety of field experiments and research projects. Overall, Florida Tech’s location is ideal for keeping pace with developments in science, technology and business.

**Facilities**

The **Homer R. Denius Student Center** houses the SUB Café and Deli, the bookstore and the campus post office. Located on the second floor is the Office of Student Life, which includes the dean of students’ office, student activities, orientation and residence life. The John T. and Martha Hartley Room and offices for Student Government (SG), Campus Activities Board (CAB) and other campus organizations are also on the second floor.

Located on the first floor of the Denius Student Center, the **bookstore** offers new and used textbooks, office supplies, study guides, magazines, postcards and imprinted giftware. Clothing for all seasons, hats, umbrellas and an extensive collection of gift items are also featured. Students may sell their used textbooks year-round with a Florida Tech Student ID card. Order online at www.fit.bkstore.com or use the order-by-phone service. Bookstore hours are Monday through Friday from 8:30 a.m.–5 p.m., with extended hours at the beginning of each semester.

University residence halls provide a variety of accommodations including single-sex and coed halls, with both community and private or shared bathrooms. Each residence hall room and apartment is equipped with two Ethernet connections to the university's fiber-optic network. **Southgate Apartments** offer studio, one-, two- and three-bedroom apartment options for upper-division students. Located on the edge of the Botanical Garden, **Columbia Village** offers fully furnished four-bedroom suite-style living with efficiency kitchens. The Columbia Village commons building features a meeting room, laundry facilities, resident assistant office and a resident director's apartment. **Harris Village Suites** offer one-, two-, and four-bedroom apartments with full kitchens, and laundry and recreation areas. Priority for all housing is given to undergraduate students.

The **Botanical Garden** is a lush Florida forest of palm, water oak and tropical vegetation on campus. Visitors can enjoy leisurely walks on the pathways through this garden. One path, the Dent Smith Trail, is named in honor of the man who founded the Palm Society and contributed significantly to the university’s palm collection. More than 200 species of palm, some quite rare, are found on the campus.

The **Charles and Ruth Clemente Center for Sports and Recreation** is a $6.8-million sports complex that opened in fall 2001. The 57,250-sq.-ft. facility houses varsity and intramural basketball courts, a racquetball court, a complete fitness center, group fitness room, volleyball and badminton courts, the Center Court food services area, men’s and women’s locker rooms, an equipment checkout area and two multipurpose meeting rooms. A complete outdoor recreation rental program offers canoes, kayaks, camping and backpacking equipment for rent. The 5,000-sq.-ft. weight and fitness area is equipped with cardiovascular machines including treadmills, elliptical machines, exercise bikes and stair-climbers, free weights and selectorized weight equipment. Recreation and athletics department offices are also located in the facility. The Clemente Center hires student staff to work in the facility throughout the year.

The **Ruth Funk Center for Textile Arts** is the only museum of its type in the state. Dedicated to furthering the understanding of cultural and creative achievements in the textile and fiber arts, the center will preserve, maintain, display and interpret an international collection of textiles through public exhibitions and educational programs.

Collection highlights include hand-made textiles, embroidery, garments and related accessories from around the world, spanning the early 19th to mid-20th centuries. Through a rotating exhibit schedule, the center will provide a forum for expanding perceptions of the visual arts, encouraging dialogue about traditions, cultural identity and aesthetics.

The 500-seat **W. Lansing Gleason Performing Arts Center** is designed for stage plays, musical productions, scientific displays, lectures, seminars, camps and conferences. It is equipped with a complete control booth for professional stage facilities, lighting and sound. The facility is equipped with both C- and KU-band, and digital satellite downlink services that can be incorporated into productions and viewed on a large screen. Situated in the
central portion of the campus, the center is a cultural asset to the university and surrounding community. The Jerome P. Keuper Administration Building houses the offices of the associate vice president for enrollment management, financial aid, international student and scholar services, business and retail operations, and career management services and cooperative education. Also located in this building are the offices of graduate and undergraduate admission.

The 65,000-sq.-ft. John H. Evans Library is located in the Learning Pavilion, which also houses the Applied Computing Center, Academic Support Center and a teaching auditorium. The library’s website (www.lib.fit.edu) is accessible around the clock on campus and remotely. It provides an online catalog, electronic journals, citation and full-text databases and electronic gateways to information resources worldwide. Electronic databases include 360 Search, ACM Portal, Aerospace and High Technology Database, Academic Search Complete, Aquatic Sciences and Fisheries Abstracts, Biological Abstracts, Business Source Complete, CCH Internet Research NetWork and CCH Internet Tax NetWork, Conference Papers Index, EBSCOhost EJS, Emerald Full Text, Engineering Village, ENGNetBASE, Environmental Impact Statements, Environmental Sciences and Pollution Management, FirstSearch, Grove Art Online, Grove Music Online, IEEE/IEEE Electronic Library, Ingenta, LexisNexis Academic, Literature Resource Center, MathSciNet, Mergent, Oceanic Abstracts, ProQuest, ProQuest Dissertations and Theses Full Text, PsycARTICLES, PsycINFO, SciFinder Scholar, SociINDEX with Full Text, Thomson Gale, TOXLINE, Ulrichsweb, Web of Knowledge, and WilsonWeb. These resources complement the print, government documents and audiovisual collections. A classroom is equipped for multimedia presentations. Library faculty and staff offer specialized instruction and ongoing assistance with information access.

Current holdings comprise in excess of 117,000 books and several thousand additional e-books, more than 228,000 government documents, and an extensive collection of scholarly journals including more than 32,000 current print and electronic titles. The library participates in the Federal Depository Library Program, which provides federally produced information to the library. Professional library memberships include the American Library Association, the Central Florida Library Cooperative, Independent Colleges and Universities of Florida (ICUF), the Library Association of Brevard, the Online Computer Library Center (OCLC), and Lyrasis.

Of particular interest to undergraduate students is Research Sources and Systems (COM 2012), taught by faculty librarians. This one-credit course familiarizes students with a variety of research strategies, sources and services, and emphasizes traditional and electronic research tools available in the students’ major fields. The skills and knowledge gained prepare a student to effectively perform scholarly library research. Graduate students are invited to attend a three-hour graduate research workshop, offered each semester.

The seven-story Crawford Building provides space for modern laboratories, classrooms and faculty offices for the mathematical sciences, and humanities and communication departments. Also in the Crawford Building are the offices of the vice president for research, the associate vice president for information technology and chief information officer, the assistant vice president for institutional compliance, and the senior associate dean of the Nathan M. Bisk College of Business Extended Studies Division. In addition to these, the building houses the Human-Centered Design Institute and the office of its director.

The Ray A. Work Jr. Building currently houses the Office of the Registrar, the Registration Center, the Office of Human Resources and the Offices of the Controller and Student Financial Services. The building was dedicated and renamed in Work's honor in 1987.

Two interesting bas-reliefs remain from the original structure. The first, located at the northeast corner of the building depicts the Greek hero Bellerophon astride the winged horse Pegasus. The second, located beneath the recessed stairwell is believed to portray the founders’ commitment to the search for world peace through education.

The Edwin Link Building accommodates environmental sciences, oceanography and ocean engineering.

The F.W. Olin Engineering Complex houses all departments of the College of Engineering with the exception of the department of marine and environmental systems, which is housed in the Link Building. This three-story facility includes 26 specialized research and teaching laboratories and the 145-seat Lynn Edward Weaver Auditorium.

The F.W. Olin Life Sciences Building is the home of the biological sciences programs. This two-story facility contains eight teaching laboratories and 12 research laboratories that were designed with “flex space” for customizing the areas to meet the needs of specific activities.

The F.W. Olin Physical Sciences Center houses the office of the dean of the College of Science; chemistry, physics and space sciences offices and laboratories; a high-bay research area; an observatory dome; and a rooftop deck area that will accommodate up to 15 additional telescopes. An 0.8-m telescope, the largest research telescope in the state of Florida, was installed in the observatory dome in November 2007 (see research in the physics and space sciences department in the Degree Programs section).

A $5 million gift from Community Foundation of Brevard and Harris Corporation funded the Harris Institute for Assured Information housed in the new 29,000-sq.-ft. Harris Center for Science and Engineering (see “Research” in this section). The center also houses staff offices of the computer sciences department.

The Shephard Building is the home of the science and mathematics education department.

George M. Skurla Hall is the home of the College of Aeronautics. It is a modern two-story building that includes faculty offices, classrooms, laboratories in air traffic control, advanced systems and computers, and a 125-seat auditorium. The flight training department is located nearby at the Melbourne International Airport.

Separate academic buildings on campus are dedicated for use by the Nathan M. Bisk College of Business and College of Psychology and Liberal Arts.
The Emil Buehler Center for Aviation Training and Research consists of a main building and 17,600-sq.-ft. hangar, located on eight acres at Melbourne International Airport. In addition to flight training, the building houses centers in human factors and simulation, and room for a fixed-base operation with space for 44 aircraft on the apron for student use and aviation services to the local population. Special features include separate rooms for student training and a student lounge and airfield viewing room, lounges for both instructor and general aviation pilots, conference and briefing rooms, a room for weather/flight planning and offices for general operations. Emil Buehler was an aviation pioneer, architect and engineer who left behind a legacy of aviation science and technology innovation.

The Scott Center for Autism Treatment is dedicated to providing the highest quality treatment, training and applied research to enhance the functioning and improve the quality of life of children with autism and related disabilities in Central Florida. The center provides empirically supported behavioral and allied health care diagnoses, assessments and treatments for children and their families; intensive training and supervision in treatment for autism and related disabilities to students enrolled in the Florida Tech applied behavior analysis master's program and to other professionals and paraprofessionals who will be working with this population; and an ongoing program of research directed toward improving clinical and behavioral outcomes for children with autism spectrum disorders (ASD) and developing technological treatments and teaching aides for this population.

Services

The Information Technology department provides services to the campus community in the areas of e-mail accounts, computing facilities, technology support and network services. In addition, the department is responsible for telephone service on campus. Resources include a variety of multimedia classrooms, the Applied Computing Center, the TEC Center and the F.W. Olin Production Center. Information on both services and facilities is available at www.it.fit.edu or by e-mail to info@it.fit.edu.

All residence halls and on-campus apartments are wired for network and Internet access. Wireless access to the campus network is limited to select areas of the Florida Tech campus. Students are assigned e-mail accounts upon admission.

The Office of Career Management Services personnel assist students in obtaining professional, career-oriented, permanent employment. Assistance in résumé writing, interviewing techniques and career counseling is available. An updated Career Resources Library is also available for student use. Current job listings are posted in prominent areas throughout the campus, in major academic units and on the career management services website. As part of career services, a résumé referral program is available for all students registered with this office. Relevant workshops are presented throughout the year.

Career management services maintains an interview schedule throughout the academic year. Students must be registered with the office for on-campus interviews with recruiters from companies seeking employees with specific academic backgrounds.

Career management services annually presents two career fairs that highlight professionals, agencies, corporations and services from throughout the United States. Summer internships are also listed by the Office of Career Management Services, and assistance is provided for local, national and international searches of internship listings and information on employers. Credit for internships can be arranged through the cooperative education program.

The cooperative education program at Florida Tech is designed to prepare students for professional careers through productive work experiences in fields related to their academic or career goals. It provides progressive experiences in integrating theory and practice. The co-op goals are to provide curriculum-related employment opportunities for students before their graduation; to provide a program containing structured work experience that will be beneficial to students in terms of both their personal and professional growth; and to assist employers in the recruitment process. Co-op is a partnership among students, educational institutions and employers.

The cooperative education program is open to all majors. Two co-op plans are offered to students, as well as the engineering Protrack co-op program for engineering majors (see College of Engineering in the Degree Programs section). The conventional plan integrates alternating periods of full-time paid work experience with full-time academic study. The parallel plan incorporates part-time paid work experience simultaneously with a part-time academic course load. In addition, students can receive credit for approved one-term experiences or back-to-back work terms.

Students participating in the university’s cooperative education program (CWE 1001, CWE 2001, CWE 3001 and CWE 4001) receive free elective credits that in some cases may be applied toward degree requirements. They are classified as full-time students when working full time.

Availability of co-op employment opportunities varies considerably from field to field. For further co-op information, contact the assistant director in the Office of Career Management Services, room 210, Keuper Administration Building, or call extension 8102.

The Office of Online Learning provides administrative services to support students and faculty in the Florida Tech University Online degree programs through a partnership with University Alliance.

The Office of Strategic Initiatives provides for the development, promotion and management of the Florida Tech Research Park.

Florida Tech Consulting offers a broad array of consulting services to local, national and international organizations, using Florida Tech faculty, staff and facilities. From airport planning to technological needs assessments, Florida Tech Consulting’s extensive range of academic experts and industry professionals gives clients an opportunity for expertise rarely offered by a single consulting firm. Go to www.fit.edu/consulting for more information.

The Office of Student Employment (OSE) assists students in obtaining employment while they are enrolled at the university. Assistance is provided with part-time on- and off-campus employment, résumé critiques, interviewing techniques and job search strategies. Many students find interesting and rewarding jobs that not only help pay their bills, but provide the opportunity to
build a base of experience for their future careers. OSE is located on the second floor, Keuper Administration Building, room 210.

The Federal Work-Study (FWS) program is a federally funded program providing students with part-time, on-campus employment. Only students who receive financial aid are eligible for this program. Work-study awards are made by the Office of Financial Aid based on need and dependent on available funds, so it is highly recommended that a Free Application for Federal Student Aid (FAFSA) be submitted early. Students receiving FWS employment report to the Office of Student Employment at the beginning of each academic year. There are a variety of work-study job opportunities (see “Undergraduate Student Information” in the Academic Overview section for more information on financial aid).

The FWS Community Service program exists within the Federal Work-Study program. It provides off-campus part-time jobs to eligible students in nonprofit community organizations. Available positions vary each semester, and may be major-related or clerical.

The Florida Work Experience Program (FWEP) is a state-funded program open to FWS students who are Florida residents. FWEP provides degree-related experience as well as income for the student.

The College Roll program provides on-campus employment for currently enrolled students. Positions are temporary part-time jobs and are not based on student need.

Counseling services at Florida Tech are designed to assist students with educational, vocational, financial, social and personal problems, including the following:

The Academic Support Center (ASC) helps undergraduates with academic difficulties by providing tutoring and counseling directed toward both their studies and campus life as it relates to their studies. The staff responds to students’ academic concerns by offering information and referral services.

Counseling and Psychological Services (CAPS) promotes the best possible academic, vocational and emotional health for Florida Tech students by providing a variety of support services, which include individual, couples and group counseling, career assessment, outreach and consultation, and crisis intervention free of charge. In addition, psycho-educational evaluations and psychiatric services are offered for a fee. Licensed psychologists and psychiatrists are on staff to provide services, as well as masters-level psychology interns enrolled in the clinical psychology doctoral program. All services are offered on-site at the Melbourne campus.

Hours of operation are Monday–Thursday, 8 a.m. to 5 p.m. and Friday, 8 a.m. to 4 p.m. CAPS is located at the corner of University Boulevard and Country Club Road, adjacent to Holzer Health Center.

Additional information about CAPS services and other resources are available at www.fit.edu/caps.

The Holzer Health Center is operated by OMNI Healthcare, a private medical provider. All full-time and part-time students may use this facility and receive free office visits and consultations. Students may use their university student health insurance or third-party insurance (in accordance with their health insurance policy provisions) along with personal funds to pay for any additional services provided by OMNI Healthcare. Students are required to present their Florida Tech Student ID cards to be seen at the health center.

The health center provides medical services covering a wide range of health care needs including routine illness, minor injuries, radiology and diagnostic services, and works to protect the student body from the spread of communicable diseases. The health center cannot accept responsibility for prolonged illness or chronic diseases. When necessary, students are referred to other medical specialists and/or hospitals in the Melbourne area.

All students must provide a completed medical history report, certified by the signature of the student’s health care provider, including proof of the required immunizations, whether or not they plan to use the health center. Exemptions to the immunization policy shall apply only if a student submits a written statement signed by their church, hall, temple or spiritual leader that the administration of immunizing agents conflicts with their religious tenets or practices, or a licensed physician submits written certification that the student should be exempt from the required immunization, based on valid clinical reasoning or evidence demonstrating the need for an exemption, and indicating when the student would no longer be exempt from immunization. If the medical exemption no longer applies, the student must comply with the policy within 30 days. Any medical exemption will be reviewed by the university’s medical director.

The Office of International Student and Scholar Services (ISSS) provides support and guidance to international students and scholars at Florida Tech. The ISSS staff assists students in meeting their educational goals and objectives, and in interpreting U.S. Citizenship and Immigration Services (USCIS) regulations. Services include assisting F, J and H visa holders with travel signatures, new I-20s, international student orientation, letters to social security and visa extensions, as well as other immigration matters (see “Admission Requirements for International Students” in the Academic Overview section for undergraduate students).

ISSS also offers various programs designed to assist students in adjusting to life in the United States and at Florida Tech. These programs include International Student and Scholar Orientation, the International Friendship Program and seminars on such topics as employment and immigration issues.

It is mandatory that all international students check in with the Office of International Student and Scholar Services with their passports and entry documents (I-20, or DS 2019 and I-94 card) upon arrival on campus.

Florida Tech’s Residence Life Program is committed to supporting and enhancing the academic mission of the university. Residence life staff work with resident students and various campus departments to ensure clean, comfortable and well-maintained residence halls.

The residence life program includes all of the student life aspects of residential facilities and the formulation and interpretation of all policies and procedures affecting students in residence. It also includes all counseling and student conduct concerns, programming and community development. The emphasis is on providing living and learning experiences from which people can grow. The major role of the program is to support and enhance the development of the personal as well as academic life of students while they are at Florida Tech.
The Office of Veterans Affairs for Melbourne campus students is located in the Office of the Registrar and has a coordinator available to assist veterans and their dependents with both university and VA-related matters. In addition to providing information regarding VA education benefits, tutorial assistance and employment services, the office offers individual counseling and referrals. For more information, Florida Tech University Online students should contact the military veterans affairs coordinator at (321) 674-8204 or by e-mail to uava@fit.edu, and Extended Studies Division students, the site director at their location.

The Military Science Program, administered from Campbell Hall, has coordinators available to assist any qualified student to achieve a Senior Army ROTC scholarship. More information about the Florida Tech military science program can be found under the College of Psychology and Liberal Arts in the Degree Programs section.

The Campus Services Office is located on the ground floor of Evans Hall next to the Black Kats Café. The office is responsible for the administration of student housing enrollment, student and staff meal plans, ID cards, residence hall card access and student health insurance.

Florida Tech’s campus dining service is committed to providing the campus community with quality food and services in a clean, comfortable and friendly atmosphere. Services include traditional all-you-can-eat and à la carte locations, catered affairs, pizza delivery and grocery services. All locations accept the meal plan, cash, checks and major credit cards. For more information, visit www.fit.edu/food. Campus dining locations are:

Rathskeller: Provides late night dining in a social atmosphere. The “Rat” also houses a convenience store; is located on the ground floor of Evans Hall and is open seven days per week for lunch and late night activities.

Black Kats Café: Late night coffee house and lounge is located adjacent to the Rathskeller and is open daily until 1:00 a.m.:

SUB Café & Deli: Located in the Denius Student Union building in the middle of campus, the SUB is open Monday through Friday for breakfast and lunch, and offers an extensive specials menu along with a grill, deli, gourmet coffee and desserts.

Center Court: Located in the Clemente Center on the south side of campus, Center Court offers a healthy dining selection for breakfast, lunch and dinner, Monday through Friday. Center Court serves a special concessions menu for varsity sports events.

The Conference Services Bureau schedules on-campus venues for internal and external events and summer programs (classrooms, outdoor areas, the Hartley Room, Clemente Center, Gleason Performing Arts Center). Venues are scheduled online at http://events.fit.edu, or directly through the bureau on campus.

Co-Curricular Activities
Florida Tech hosts more than 100 student organizations for students to join and hold positions of leadership. Organizations represent the varied interests of Florida Tech’s students. These interests include student governance, social programming, cultural education and appreciation, fraternity/sorority membership, political and religious development, dance, music and theater performance, academic and honor organization involvement, science fiction/historical role playing and participation in athletic club team sports.

New campus organizations are formed annually based on student interest. All organizations are supported by the Office of Student Activities and a faculty/administrative adviser. Organizations are provided leadership training and recognition throughout the year.

The university provides varsity athletics, and intramural and recreational activities for students. Florida Tech is a member of the National Collegiate Athletic Association (NCAA) Division II and competes in the Sunshine State Conference. Men’s sports include baseball, basketball, cross country, golf, rowing, soccer and tennis. Women’s sports include basketball, cross country, golf, rowing, soccer, softball, tennis and volleyball. A new Panther football team will be added to the list of sports in the near future.

Panther teams have earned regional titles in baseball, men’s soccer and women’s basketball, and Sunshine State Conference championships in men’s soccer, men’s and women’s cross country, men’s and women’s basketball, and women’s rowing. In addition to competing at the regional level, the Panthers hold team national championships in men’s soccer and rowing.

Intramural team sports include flag football, softball, volleyball, cricket, basketball, soccer and inner tube water polo. Individual intramural sports are tennis, running, golf, weightlifting, racquetball and badminton.

The Clemente Center for Sports and Recreation offers abundant opportunities for a variety of sports and recreational activities (see “Facilities” in this section).

Two swimming pools (and a new Olympic-standard pool to open in spring 2011), soccer fields, baseball and softball diamonds, four regulation tennis courts and two four-wall racquetball courts are located on campus. Nearby are two 18-hole golf courses. Students are welcome to use these facilities and to take advantage of many other recreational opportunities afforded by the warm, sunny climate, the Atlantic Ocean and the natural waterways in Brevard County. Surfing, water skiing, swimming, boating and fishing are popular activities throughout the area.

The All Faiths Center is located on the southern end of campus. It houses the Protestant Campus Ministry and the Catholic Campus Ministry (www.fit.edu/ccm). These ministries offer free dinners, daily Mass, Bible studies, community service, social activities, retreats and pastoral care.

Study-Abroad
Several study-abroad opportunities are available to students at Florida Tech through the Office of Academic Affairs. Some of these diverse programs are discipline-specific and target either undergraduate or graduate students. Consult the Florida Tech website for an overview of available international programs.
A short-term summer program is also available for students interested in studying at Oxford University in the United Kingdom. The Florida Tech at Oxford program offers numerous core curriculum courses and is open to all student levels and majors. Students earn six credit hours while studying at Oxford University. Reduced tuition is available.

Additional information about studying abroad is available from the Office of Graduate and International Programs.

RESEARCH

Institutes, Centers and Major Laboratories

Over the past decade, Florida Tech has made major additions and improvements to facilities that enhance the research components of nearly all aspects of undergraduate and graduate education. Along with these facility improvements, a number of research centers have been established to focus on particular areas of study and in many cases encourage interdisciplinary collaboration. These centers and the facilities where they are located, represent a significant research capability that supplements the various department- and program-related activities and facilities described in this catalog.

 Particularly noteworthy is the multidisciplinary Applied Research Laboratory (ARL) facility located less than two miles from the Melbourne campus. ARL houses research in ocean engineering, advanced materials, polymer flammability, lasers and electrooptics, psychology, neural network-based autonomous sensing systems and high magnetic-field physics.

Two teaching/research buildings were completed on the Melbourne campus in 1999: the F.W. Olin Engineering Complex and the F.W. Olin Life Sciences Building. The engineering complex is a 68,500-sq.-ft. facility housing 26 specialized research laboratories. The 37,000-sq.-ft. life sciences building houses 12 research laboratories designed with a flex-space to meet the needs of specific activities. The 70,000-sq.-ft. F.W. Olin Physical Sciences Center, completed in 2004, houses the departments of chemistry, and physics and space sciences, and includes numerous specialty and teaching labs.

University research faculty expended $11.6 million to buy equipment, support students, pay salaries and to cover general expenses. In addition to over a dozen research centers, five new interdisciplinary research institutes were initiated that are the focal point for Florida Tech undergraduate and graduate research. Brief descriptions of Florida Tech’s research institutes and centers follow. Not included here is research within the various degree-granting academic units, described by department in the Degree Programs section.

Oak Ridge Associated Universities (ORAU)

Since 1989, students and faculty of Florida Tech have benefited from its membership in Oak Ridge Associated Universities (ORAU). ORAU is a consortium of 98 colleges and universities, and a contractor for the U.S. Department of Energy (DOE) located in Oak Ridge, Tennessee. ORAU works with its member institutions to help their students and faculty gain access to federal research facilities throughout the country; to keep its members informed about opportunities for fellowship, scholarship and research appointments; and to organize research alliances among its members.

Through the Oak Ridge Institute for Science and Education (ORISE), the DOE facility that ORAU operates, undergraduates, graduates and postgraduates, as well as faculty enjoy access to a multitude of opportunities for study and research. Students can participate in programs covering a wide variety of disciplines including business, earth sciences, epidemiology, engineering, physics, geological sciences, pharmacology, ocean sciences, biomedical sciences, nuclear chemistry and mathematics. Appointment and program length range from one month to four years. Many of these programs are especially designed to increase the numbers of underrepresented minority students pursuing degrees in science- and engineering-related disciplines. A comprehensive listing of these programs and other opportunities, their disciplines and details on locations and benefits, can be found in the ORISE Catalog of Education and Training Programs, which is available at www.orau.gov/orise/educ.htm or by calling either of the contacts below.

ORAU’s Office of Partnership Development seeks opportunities for partnerships and alliances among ORAU’s members, private industry and major federal facilities. Activities include faculty development programs such as the Ralph E. Powe Junior Faculty Enhancement Awards, the Visiting Industrial Scholars Program, consortium research funding initiatives, faculty research and support programs, as well as services to chief research officers.

For more information about ORAU and its programs, contact Florida Tech Executive Vice President and Chief Operating Officer T. Dwayne McCay, ORAU Councilor, at (321) 674-7297; or Monnie E. Champion, ORAU Corporate Secretary, at (865) 576-3306; or online at www.orau.org.

Harris Institute for Assured Information (HAI)

Richard A. Ford, Ph.D., Harris Professor for Computer Science in Assured Information, Director. The mission of the Harris Institute for Assured Information is to promote interdisciplinary approaches to computer security and trustworthy computing through education, research and outreach by providing a single point of contact for students, faculty, funding agencies and businesses, and by crossing traditional academic disciplines to promote innovation.

Information assurance is the discipline dedicated to providing users with trustworthy data. As such, the institute focuses on new technologies for protecting people and organizations from vulnerabilities that can lead to theft of information, malicious code infection, or data destruction.

Human-Centered Design Institute (HCDI)

Guy Boy, Ph.D., University Professor of Aerospace Engineering, Director. HCDI members are faculty, permanent and visiting research scientists and graduate students conducting research in cognitive engineering, advanced interaction media, complexity analysis in human-centered design, life-critical systems, human-centered organization design and management, and modeling and simulation.

Institute for Biological and Biomedical Sciences (IBBS)

Mark B. Bush, Ph.D., Professor, Biological Sciences, Interim Director. The mission of the IBBS is to foster interdisciplinary research in the biological sciences, with special emphasis on those areas with potential medical applications.
Institute for Energy Systems (IES)
Robert L. Sullivan, Ph.D., University Professor, Electrical and Computer Engineering, Director. The mission of the IES is to provide an intellectually stimulating environment for faculty and students to conduct funded research in areas of national need. The National Energy Policy identifies these needs to be: (1) increasing domestic energy supplies; (2) increasing America's use of renewable and alternative energy; (3) increasing energy conservation and efficiency; (4) developing a comprehensive delivery system; (5) enhancing national energy security and international relationships; and (6) sustaining the nation's health and environment.

Institute for Marine Research (IMR)
Junda Lin, Ph.D., Professor, Biological Sciences, Director. The mission of the IMR is to advance marine research, education and outreach by coordinating shared facility management, recruiting scholars and students, encouraging interdisciplinary research, and promoting collegiality and cohesiveness within the university.

Institute for Materials Science and Nanotechnology (IMSN)
Gordon L. Nelson, Ph.D., Dean, College of Science and Professor, Chemistry, Interim Director. The IMSN mission is to enhance and expand materials research and outreach at Florida Tech and advance nanotechnology research and outreach by promoting joint multi-investigator research, encouraging interdisciplinary and trans-disciplinary research, coordinating shared faculty infrastructure, recruiting scholars and students, coordinating presentation of materials- and nanotechnology-related activities to external governmental and non-governmental agencies, foundations and industry, and promoting collegiality and cohesiveness within the university in the area of materials and nanotechnology. The 21 institute faculty come from diverse engineering and science disciplines. Current research funding of participating faculty is approximately $4 million, including research, instrumentation and participation in multi-investigator projects.

Center for Aviation Human Factors (CAHF)
John E. Deaton, Professor, College of Aeronautics, Director. CAHF was founded to facilitate aviation-related research, master's-level thesis work, classroom instruction and conferences. The focus is on applied research that enhances aeronautical systems to improve human performance, safety and pilot training. Assets available through CAHF include various flight simulators housed in the adjacent basic aviation training device lab that include aviation training devices equipped with ELITE 135 software capable of instrument currency check rides. Additional hardware is available and can be used to configure any station for either a single-engine or a multi-engine configuration. A fully functional King Air 200 flight training device is available as well. The CAHF also has full access to a flight training facility, FIT Aviation, LLC. This facility consists of a full service fixed base operator (FBO) with a fleet of various aircraft and flight training devices.

Center for Corrosion and Biofouling Control (CCBC)
Geoffrey W.J. Swain, Ph.D., Professor, Oceanography and Ocean Engineering, Director. The mission of the center is to understand the processes of biofouling and corrosion, and to develop and apply innovative solutions for control and prevention. Its objectives are to advance the state-of-the-art in corrosion and biofouling control; to establish mutually beneficial collaborative relationships with local, national and international university, government and industrial partners; and to provide graduate and undergraduate students a world-class research and educational experience that prepares them for both academic and industrial professional opportunities.

Current research activities include testing and evaluation of anti-fouling systems; investigation of hydrodynamic performance of ship hull coatings and the effectiveness of ship hull cleaning programs; the mechanisms of adhesion and release of fouling to novel biocide-free coating systems; the development of biomimetic materials for underwater propulsion; and methods for the prevention and remediation of corrosion on steel hulled sailing ships.

Center for Entrepreneurship and Small Business Development (CESBD)
S. Ann Becker, Ph.D., University Professor, Business and Computer Sciences, Director. The Center for Entrepreneurship and Small Business Development integrates entrepreneurial education, training and research in pursuit of enterprise creation, sustainability and growth. The center fosters partnerships among students, faculty, community members and entrepreneurs. These partnerships support an educational environment bridging theory and practice in pursuit of early-stage innovation, business leadership and new business ventures.

The center encompasses the Women's Business Center (WBC), the Entrepreneurial Training Services (ETS) program and the National Center for Small Business Information (NCSBI). The WBC is funded by a cooperative agreement with the U.S. Small Business Administration, offering technical assistance for nascent entrepreneurs and small businesses. The ETS program offers entrepreneurs intensive training on business development, supported by business faculty, community leaders and business area experts. The NCSBI provides services to small business with an emphasis in business technologies, government contracting and financial literacy.

Center for High Resolution Microscopy and Imaging (CHRMI)
Michael Grace, Ph.D., Associate Professor, Biological Sciences, Director. The Center for High Resolution Microscopy and Imaging is a multidisciplinary laboratory providing state-of-the-art light and fluorescence microscopy, transmission electron microscopy, scanning electron microscopy, scanning probe microscopy and x-ray microanalysis of natural and artificial materials. The CHRMI contains necessary equipment and expertise to prepare almost any kind of sample for microscopic evaluation, to image sample surfaces and cross-sections at very high resolutions and to analyze elemental compositions of materials. Support staff maintains instrumentation and trains users in sample preparation and analyses of microstructure and microchemistry. Image collection is both film-based and digital. Support platforms provide detailed image analysis capabilities.

Center for Organizational Effectiveness
Lisa A. Steelman, Ph.D., Associate Professor, Program Chair, Industrial/Organizational Psychology, Director. The Center for Organizational Effectiveness is a research and consulting center managed by industrial/organizational psychology faculty and graduate students. The center provides customized, cutting-edge research and consulting services on organizational issues and serves as a hub for research into data-driven solutions for company and employee-related problems. The center conducts research and provides services in all areas of industrial/organizational psychology including selection and assessment, training and development,
survey research and organizational development and career development and succession planning. The center also facilitates student internships with local organizations.

**Center for Remote Sensing (CRS)**

Charles R. Bostater Jr., Ph.D., Associate Professor, Environmental Sciences and Physical Oceanography, Director. The center’s purpose is to encourage excellence in the development and application of remote sensing science and technology. It is organized as a collaborative center among and between faculty within the College of Engineering, College of Science and College of Aeronautics. Under the authority of the Space Grant Act of 1988, Florida Tech is a member of the Southeastern Space Consortium and the Florida Space Grant Colleges Consortium. The center has consulted and provided services to defense contractors, NASA centers and contractors, the Department of Energy and DOE subcontractors, state of Florida water management agencies, the Department of State and U.S. Department of Education, and are affiliated with foreign institutions and organizations.

Facilities for remote sensing teaching and research include the ERDAS Image Analysis System, Evans Library, the Geographical Information Systems Laboratory, the Marine and Environmental Optics Laboratory and the Synoptic Meteorological Laboratory. Various laboratories and facilities in academic and research computing, computer science; aerospace, computer, electrical and mechanical engineering; physics and space sciences; and space systems are also available. Field studies can be conducted through the College of Aeronautics’ fleet of aircraft. The university operates several small boats and charters a well-equipped vessel for offshore, estuarine and river work.

Center faculty offer a wide variety of courses at the graduate and undergraduate level, including environmental satellite systems and data, hydroacoustics, digital image processing, and environmental optics for remote sensing.

**Center for Software Testing, Education and Research (CSTER)**

Cem Kaner, J.D., Ph.D., Professor, Computer Sciences, Director. The mission of the center is to “create effective, grounded, timely software reliability and quality-related software metrics.” With support from the National Science Foundation, Texas Instruments and IBM, the center has been able to develop an extensive collection of course materials, with more video-based lectures on the way.

Current research includes high-volume test automation, the practice and psychology of exploratory testing, failure mode and effects analysis for software, and the development of testing-related metrics. Course materials developed at the center are freely available for reuse under a Creative Commons license, enabling faculty at other schools and companies to base or enhance their courses with them.

**Dynamic Systems and Controls Laboratory (DSCL)**

Hector Gutierrez, Ph.D., P.E., Associate Professor, Mechanical Engineering and Y.I. Sharaf-Eldeen, Ph.D., P.E., Associate Professor, Mechanical Engineering, Co-directors. DSCL supports a variety of research and teaching activities in dynamic systems including magnetic suspension technology, machinery monitoring and fault diagnosis, vibration control of structures, computer-based instrumentation and mechatronics. Current research activities include online vibration and angular motion measurements and analyses to develop condition monitoring and maintenance information systems for power generation and transmission systems, and components in rotating machinery; real-time control of structural vibration based on online spectral estimation and magneto-rheological (MR) tuned-mass dampers; nonlinear control of magnetic suspension systems for high-precision positioning applications; and analysis and control of electrodynamic launching systems for space and military applications.

**Fatigue Management Institute**

Thomas H. Harrell, Ph.D., Professor, School of Psychology, Director. The institute serves as the national focal point for integrating emerging research findings with techniques for day-to-day management of fatigue associated with chronic medical disorders. The institute conducts research on fatigue and fatigue management interventions, provides fatigue management training and disseminates summaries of national and international research findings related to fatigue and its management in chronic medical conditions. The current long-term initiative of the institute is the National Fatigue Survey.

**Laser, Optics and Instrumentation Laboratory (LOIL)**

Kunal Mitra, Ph.D., Professor, Mechanical Engineering and Chelakara Subramanian, Ph.D., P.Eng (UK), Professor, Aerospace Engineering, Co-directors. LOIL exploits current technologies in continuous wave and short-pulse lasers and optics to develop new techniques for measuring and characterizing material properties. Faculty and graduate students are involved in analyzing the interaction of these lasers with different materials for various applications. Biomedical applications focus on detecting and irradiating tumors and inhomogeneities in tissues. Material characterization/processing applications involve detection of defects in materials such as debonding of thermal protection tile systems and thermal response of materials subjected to high-energy radiation. Remote sensing applications focus on lightning detection in cloud media and landmines in shallow waters. The challenge of integrating laser sources, system optics, instrumentation, measurement schemes and data acquisition provides students with new learning experiences in these areas. Equipment currently in use includes a mode-locked short-pulse laser, high power continuous wave lasers, a modulator, an ultrafast photodetector, a sampling head oscilloscope, a streak camera, miscellaneous optics and optical accessories, a thermal camera and an image processing system.

**Microelectronics Laboratory**

Susan K. Earles, Associate Professor, Electrical and Computer Engineering, Director. This microelectronics facility is designed to be a teaching laboratory as well as an advanced research laboratory. A microelectronics fabrication course is taught to graduate and undergraduate students. In this course, students complete, fabricate and test a variety of electronic devices such as photovoltaic devices and hydrogen sensors. Research conducted in the facility includes polymer-based and silicon-based electronic and optoelectronic devices. The facility is a 3,800-sq.-ft. structure with all support services needed for modern semiconductor research including a 3,000-sq.-ft. clean room and areas dedicated to circuit testing and equipment maintenance. Equipment in the laboratory includes ultraviolet photolithography, diffusion furnaces, a thin-film evaporator, wet chemistry benches, and measurement and inspection equipment. The advanced research laboratory presently features a
scanning probe microscope, plasma enhanced deposition and lasers for teaching and research.

**National Center for Hydrogen Research (NCHR)**

Mary H. McCay, Ph.D., Research Professor, Mechanical and Aerospace Engineering, Director. The NCHR was established with funding from NASA to perform research and development concerning the application of hydrogen as a fuel for airborne platforms. Its objectives are to (1) develop and demonstrate the use of a hydrogen-based fuel cell and practical on-board storage of hydrogen fuel in an operating aircraft; (2) develop an aircraft test platform as a hydrogen fuel, fuel cell and sensor test bed for collaborating experimenters; (3) improve the understanding and performance of fuel cells through computational and laboratory experiments; (4) develop a technique for hydrogen purification as a means of improving fuel cell performance; (5) develop fiber-optic sensors suitable for safety applications, systems monitoring and withstanding exposure to cryogenic hydrogen, and with the capability to resist degraded performance during extended lifetime service; (6) investigate alternate approaches to hydrogen and fuel cell production to improve affordability, scalability and lifetime cost-of-ownership; and (7) establish collaborations with universities.

**Robotics and Spatial Systems Laboratory (RASSL)**

Pierre M. Larochelle, Ph.D., Professor, Mechanical Engineering, Director. RASSL is dedicated to the development of mechanical systems that generate spatial motion and force transmission. Research focuses on achieving advances in design methodologies for these systems as well as the techniques for using them in industrial and consumer applications. A mutually beneficial relationship has been achieved with local industry (e.g. NASA-KSC, GSMA, AMTI, BWT and ICS) that has resulted in motivating K–12 youth toward engineering, science and technology through active involvement in the FIRST Robot Competitions. Equipment includes a Motoman SV3x robot, a Mobile Robotics PowerBOT and a Zevatech CT2000 robot.

**Scott Center for Autism Treatment**

Fran Warkomski, Ed.D., BACB-D, Executive Director, Ivy Chong, Ph.D., BACB-D, Program Director and Barbara Paulillo, Psy.D., Clinical Director. The Scott Center for Autism Treatment was established to provide state-of-the art service, training and applied research for children with autism spectrum disorders (ASD) and their families. It is an integral service/research/training component of Florida Tech’s School of Psychology. Services are provided by faculty and graduate students from Florida Tech’s psychology graduate programs in applied behavior analysis and clinical psychology and will expand to include other allied health professionals in speech pathology, occupational therapy and medicine. The new 18,000-sq.-ft. building is opened in September 2009 on campus in close proximity to the School of Psychology.

The services provided include: (1) early intervention services for young children (i.e., 2-6 years of age) with autism and their families; (2) behavior assessment and intervention services for children, adolescents and adults with autism and/or related disabilities who exhibit challenging behavior (e.g., self-injury, aggression, property destruction, stereotypy); (3) feeding disorder assessment and treatment services for children ages 2–10; (4) social skills’ training for children and adolescents who have autism, Asperger’s disorder and related disabilities; (5) training workshops and seminars for parents and teachers who work with children with autism and related disabilities; (6) courses for individuals interested in obtaining certification as a Board Certified Associate Behavior Analyst® and/or a Board Certified Behavior Analyst®. The center will have an ongoing program of research directed to improving clinical and behavioral outcomes for children with autism spectrum disorders (ASD).

**Southeastern Association for Research in Astronomy (SARA)**

Terry Oswalt, Ph.D., Professor and Department Head, Physics and Space Sciences, SARA Chair. SARA is a consortium of ten universities lead by Florida Tech that operates one-meter-class automated telescopes at Kitt Peak National Observatory in Arizona and Cerro Tololo Interamerican Observatory in Chile. The SARA members are Florida Tech, East Tennessee State University, Valdosta State University, Florida International University, Clemson University, Ball State University, Agnes Scott College, University of Alabama at Tuscaloosa, Valparaiso University and Butler University. The observatory can be operated by an astronomer on site as well as remotely via Internet link from the SARA institution campuses. In addition to supporting faculty and student research activities in a wide variety of areas such as planetary science, stellar astronomy and active galaxies, SARA hosts a unique multi-institution Research Experiences for Undergraduates (REU) program funded by the National Science Foundation. Each year, this program provides internships to about a dozen students selected competitively from around the country who work one-on-one with faculty on research projects. The SARA REU program is one of the largest astronomy internship programs in the United States.

**Sportfish Research Institute (SRI)**

Jonathan M. Shenker, Ph.D., Associate Professor, Biological Sciences, Director. SRI is dedicated to studies of the sport fishery species that are tremendously important to Florida. Research currently focuses on the use of the Indian River Lagoon as a nursery habitat for juvenile tarpon, the basic biology and ecology of these juveniles, the genetic structure of tarpon populations and the role of offshore artificial reefs in creating habitat for diverse sport fish species. In addition to field and laboratory research, SRI personnel present talks and provide information to local and regional sport fishing organizations and publications. Funded in part by state and local grants, SRI also seeks funding and participation from corporations associated with the fishing industry and from private individuals.

**Vero Beach Marine Laboratory (VBML)**

Junda Lin, Ph.D., Professor, Biological Sciences, Director. VBML is located on four acres of oceanfront property in nearby Vero Beach. This facility serves as a field station for the university in support of research and teaching in the marine sciences. The beachfront location of VBML provides ready access to field study sites for work on the biology of coastal organisms and for studies of physical and geological processes of the coastal zone. Major research efforts at the laboratory are related to mariculture and marine biology/ecology. A two-story building, equipped with seawater tables and a flow-through system, supports research on mariculture and ecology of marine organisms. Several greenhouses and large tank systems are available for studying aquaculture, behavior and ecology of marine animals. Classrooms, offices and dry laboratory facilities are provided in the main laboratory building.
Wind and Hurricane Impacts Research Laboratory (WHIRL)

Jean-Paul Pinelli, Ph.D., P.E., Professor, Civil Engineering, Director. WHIRL is dedicated to the study of the effects and impacts of windstorms including hurricanes, tornadoes and thunderstorms, and other related meteorological hazards (e.g., flooding and tidal surges) on the natural environment and man-made structures. The laboratory involves a multidisciplinary team of engineers, scientists and business experts. It takes advantage of a geographic location in the heart of Florida’s Space Coast to serve the needs of industry, government and the public in wind hazard mitigation. The laboratory’s activities include research on mitigation of losses of life, property and the environment; education of the public through dissemination of information; and the development of a multidisciplinary program of study focused on wind engineering and wind-related socioeconomic studies and analyses.

Research topics in the laboratory include action of strong winds and storm surges on structures; evaluation of codes, standards and retrofitting techniques for buildings and infrastructure systems; risk assessment for existing structures, coastal erosion, sediment transport and environmental damage due to storm surges and floods; development of remote sensing tools for assessing and monitoring hurricane damage, wind speed and flood levels; fundamental wind and meteorological research; wind tunnel modeling and testing; and statistical studies, analysis of economic impacts and development of potential damage maps for hurricane hazards in Florida.

Wireless Center of Excellence (WiCE)

Ivica Kostanic, Ph.D., Assistant Professor, Electrical and Computer Engineering, Technical Director. WiCE is devoted to creating a new generation of wireless engineering professionals through education and research. Driven by its academic program, WiCE considers wireless to be any system or device that relies on electromagnetic-wave propagation to perform one or more of its functions. This context includes such diverse applications as radar, global positioning, location, sensing, etc., as well as the broader class of communications systems such as satellites, point-to-point/ multi-point, WLAN and wireless WAN. In partnership with industry, WiCE offers the opportunity for faculty and both undergraduate and graduate students to engage in research and to study wireless concepts in a variety of courses. Research areas include propagation modeling, wireless systems engineering, personal communications systems, wireless sensors and multimedia communications, while also supporting simulation, fabrication and measurement of wireless communications and other systems and components.

Laboratory test equipment includes Grayson’s Spectrum Tracker, and spectrum and vector network analyzers, oscilloscopes, microwave amplifiers, oscillators and mixers, signal generators and associated active and passive RF devices. The lab performs experimental investigation using the anechoic chamber and screen room facilities. WiCE is supported by significant laboratory facilities as described under “Electrical Engineering” in the Degree Programs section.
FINANCIAL OVERVIEW

UNIVERSITY FINANCIAL SUPPORT

The university is supported by tuition and fees, research grants and contracts, and assistance from foundations, industry and the local community. Careful attention to sound business policies has placed the institution on a sound financial basis year after year.

Florida Tech was ruled tax-exempt under Section 501(c)(3) of the Internal Revenue Code (IRC) of the U.S. Treasury Department in January 1960. The university was classified in October 1970 as an organization that is not a private foundation as defined in Section 509(a) of the IRC. Gifts to the university are thus tax deductible.

Endowments

Ongoing funding is provided through earnings from the university’s endowments. Florida Tech thanks its donors who have endowed scholarships and fellowships to assist students and who have endowed the following funds to support faculty, departments and the university.

- Sarkis Acopian Endowed Professorship in Environmental Education
- Father Douglas F. Bailey, S.D.S., Endowment to Support Catholic Campus Ministry
- Max, Edith and Robert Bisk Distinguished Chair of Business
- Blatt Chemistry Seminar Endowment
- College of Engineering Endowment for Academic Programs
- College of Engineering Research Endowment
- Commitment to Excellence
- Computer Sciences (Department) Endowment
- James Constantine College of Aeronautics Endowment
- Construction Industry Advisory Board (CIAB) Endowment
- Henry L. and Grace Doherty Endowed Visiting Professorship
- Electrical and Computer Engineering (Department) Endowment
- Environmental Education Program Endowment
- Faculty Enhancement Endowment
- FIT Equipment Replacement Fund

SCHOLARSHIPS AND FINANCIAL AID

Undergraduate Students

Most of Florida Tech’s full-time Melbourne campus undergraduate students receive some type of financial assistance. The aid may be in the form of a scholarship for academic performance, need-based grants, federal grants, federal loans, work-study, on-campus employment or any combination of these awards (see Office of Student Employment in the Institution Overview section for more information on student employment opportunities).

First-year Melbourne campus students with complete admission applications on file by January 15 will automatically be considered for the Florida Tech Scholarship Program with awards of up to $18,000 annually.

Special consideration is given to qualified first-year students who are enrolled in NCSSSMST high schools, are currently engaged with a FIRST Robotics teams at their high school or are candidates for the Army ROTC scholarships.

The Army ROTC program awards four-, three- and two-year merit-based scholarships to qualified applicants on a competitive basis. These scholarships provide for full tuition and medical fees annually. An additional scholarship benefit is a designated book allowance of $1,200. Army scholarship winners and all advanced course cadets receive a tax-free subsistence allowance ranging from $300–$500 a month for up to ten months for each year the
scholarship is in effect. Scholarships do not pay flight fees. Contact the nearest Army ROTC office for more information.

**Florida Tech University Online Students**

Florida residency and eligibility for Florida state aid programs are based on state law and administrative rules.

Once the Office of Financial Aid receives notice of a student’s admittance along with the results of their FAFSA application, an award letter is prepared. Award notices are sent to students via their Florida Tech e-mail. The awards are also posted on the student’s PAWS account.

**Major Federal Financial Aid Programs**

The federal financial aid programs listed in this catalog are available to any U.S. citizen or permanent U.S. resident who is admitted to the university and has filed the FAFSA (Free Application for Federal Student Aid; available online at www.fafsa.ed.gov).

**Federal Perkins Loan**: This low-interest (five percent) loan is dependent on availability of funds each year and must be repaid to Florida Tech. This loan accrues no interest while the student attends school or during the nine-month grace period.

**Federal Direct Stafford Loan**: Amounts may vary each year. There are annual maximums dependent on need and the student’s grade level (freshman, sophomore, junior, senior). Interest does not accrue on subsidized Stafford loans while the student is in school, during the six-month grace or authorized deferment periods. Students are responsible for all interest that accrues on the unsubsidized Stafford loan while in school, and during the six-month grace period or authorized deferment period. Interest may be deferred.

**Federal Direct Parent Loans for Undergraduate Students (PLUS)**: The Federal Direct PLUS Loan can be borrowed by parents of dependent undergraduate students to help pay for their child’s education. The Federal PLUS Loan is not based on financial need. The amount borrowed each year is limited to the cost of attendance less other forms of assistance.

**Federal Work-Study**: This program provides part-time jobs for students who need financial assistance. Jobs are available both on and off campus. Students receive paychecks to help with personal expenses.

**Pell Grants**: This need-based award amount varies and can be granted each year. The award amount is directly related to the student’s expected family contribution as determined by the FAFSA form and the student’s enrollment status (full time, 3/4 time, half time or less than half time).

**Federal Supplemental Education Opportunity Grants**: Grants through this federal program are available to a limited number of students who demonstrate exceptional financial need. Priority is given to students with the greatest need.

**Florida State Financial Aid Programs**

Florida residency and eligibility for Florida state aid programs are based on state law and administrative rules. Generally, students whose families have been living in Florida for 12 months before the start of the school year are considered residents. The following programs are only available to Florida residents who are citizens or permanent residents of the United States.

**Florida Resident Access Grant (FRAG)**: All full-time undergraduate students who meet the Florida residency requirements are eligible to receive this financial assistance from the state. This amount varies from year to year, based on available state funds.

**Florida Student Assistance Grant (FSAG)**: Full-time undergraduate students who meet the Florida residency requirements and have extraordinary financial need, are eligible to receive this financial assistance from the state, depending on available funding.

**Florida Prepaid College Plan (FPCP)**: Florida Tech is an eligible institution for the FPCP program. Accumulated funds may be applied toward expenses at Florida Tech. Contact the FPCP office at www.florida529plans.com/Prepaid/index.html for further details on disbursement options.

**Florida Academic Scholars Award**: This award is valued at approximately $4,000 per year. An additional $1,500 award is provided to the top academic scholar in each school district and developmental research school.

**Florida Medallion Scholars and Florida Vocational Gold Seal Awards**: Each of these awards is valued at approximately $2,500 per year.

**Additional State Financial Aid Programs**

**Delaware, Maryland, Michigan, Pennsylvania, Rhode Island and Vermont Grants**: For information on grant amounts from these states, please contact your state’s Department of Higher Education or the Florida Tech financial aid office.

**Specialty Scholarships**

**Florida Tech Legacy Grant**: Sons and daughters of Florida Tech alumni enrolling in a full-time undergraduate program on the Melbourne campus are eligible for a $2,500 grant. This award is renewable for up to four years. This award is given in addition to any merit scholarship earned by the student.

**“Keep it in the Family” Grant**: Sisters and brothers of students who are currently enrolled simultaneously on the Melbourne campus as full-time undergraduates are eligible for a $2,500 grant. This grant is renewable for up to four years and is given in addition to any merit scholarship earned by the student. Both students, enrolled at the same time, will receive this grant.

**Florida Tech Endorsement Grant**: Applicants may receive this grant if they have a graduate of Florida Tech, an EAA member or a member of the Construction Industry Advisory Board (CIAB) submit the grant form on their behalf. It is a $1,000 grant renewable annually for up to four years. The applicant must be enrolled full time on the Melbourne campus. The application for the grant appears on the admission application and must be submitted by February 1. A student may receive only one endorsement grant.

**Florida Tech Visit Grant**: Students who apply and enroll after a visit to Florida Tech will receive a $1,000 Visit Grant Renewable for four years (a total of $4,000). The student must be admitted to Florida Tech, a U.S. citizen or U.S. permanent resident and enroll full time as an undergraduate on the Melbourne Campus.
Students may receive up to $8,000 per year if the student's cumulative GPA is 3.0 or higher and the student has completed 24 transferable semester credit hours at one or more other accredited institutions. This scholarship is for students who have graduated from high school and attended another college or university, and plan full-time attendance in one of the Melbourne campus degree programs. The scholarship is mutually exclusive and cannot be combined with the Florida Tech Phi Theta Kappa Scholarship or other merit scholarships.

Florida Tech Phi Theta Kappa Scholarship: Students may receive up to $12,500 per year if the student applies and is admitted to Florida Tech and was a member of Phi Theta Kappa (PTK). Proof of PTK membership must be submitted with the application. This scholarship is for students who have graduated from high school and attended another college or university, and plan full-time attendance in one of the Melbourne campus degree programs. The scholarship is mutually exclusive and cannot be combined with the Florida Tech Transfer Scholarship.

Florida Tech Community College Connection/Track Scholarship: Students enrolled in the Florida Tech Track program with Brevard Community College, the Connection program with Valencia Community College, or in a similar program at South Florida Community College, Indian River State College, Broward College or Miami Dade College are eligible for an award on completion of the Associate of Arts degree and subsequent enrollment at Florida Tech.

Athletics Scholarships: Florida Tech is a NCAA Division II institution. Individual coaches award Florida Tech athletics scholarships through the athletics department. Florida Tech offers scholarships for men and women in basketball, cross country, golf, rowing, soccer and tennis. Scholarships are also offered in baseball and lacrosse for men, and in softball and volleyball for women. Amounts awarded are at the sole discretion of the appropriate coach.

Scholarships/Undergraduate Awards

The following is a list of donated scholarships and is a representative sample of awards that may be available to admitted Melbourne campus students. New students are encouraged to apply for admission before January 15. Domestic students are encouraged to file a FAFSA before March 1. Early filers will be considered for admission before January 15. Satisfactory Progress Standards for Financial Aid Recipients
The academic records of all students admitted to Florida Tech for the first time will be considered sufficient to allow them to apply for financial aid. To remain eligible to receive financial aid, continuing students must meet the following Satisfactory Progress Standards instituted by the university in accordance with federal law. A review for compliance with these standards will be conducted at least once a year and at other times as required.

Grade point average (GPA): An undergraduate student is expected to achieve and maintain a GPA of 2.0 or higher. This GPA is calculated in accordance with the guidelines contained in this catalog.

Hours completed: Undergraduate students are expected to satisfactorily complete 75 percent of their attempted coursework. In general, full-time students should complete at least 12 credit hours per semester. Part-time students (6 to 11 credit hours) should complete at least 6 credit hours per semester. Florida Tech University Online full-time students should complete at least six credit hours per term; part-time students should complete at least three credits hours per term. Courses with grades of F, I, AU or W are attempted courses, but are not satisfactorily completed for the semester or term.

Time limit: Federal regulations require students to complete their degree within 150 percent of the required credit hours.

Probation and Suspension
Financial aid recipients: The first time students fail to maintain satisfactory progress toward their degree, they will be placed on financial aid probation and informed of the appeal process relative to satisfactory progress standards. A second infraction will suspend the student's eligibility for financial aid unless an appeal is filed.

Financial Overview
Scholarship recipients: Scholarship recipients are required to maintain full-time enrollment (12 credit hours) and a cumulative GPA of 2.6 at the end of each academic year. Failure to maintain the minimum requirements may result in the loss or reduction in the academic scholarship.

Graduate Students

Assistantships and Scholarships

Graduate assistantships involve a stipend or a tuition-waiver, or both, and are awarded to well-qualified master’s and doctoral students on the Melbourne campus. Awards are normally made on a year-to-year basis. However, not all students receive assistantships, and partial assistantships (such as tuition waiver only) may also be offered. International students are eligible for graduate assistantships in some academic units. In addition to specific academic unit requirements, any student whose home language is not English, whether or not the student has graduated from an English-speaking, post-secondary institution, must abide by all Florida Tech policies regarding English language proficiency found in “Languages and Linguistics” under the College of Psychology and Liberal Arts in the Degree Programs section.

Award of a teaching assistantship requires satisfactory completion of the Teaching Assistant Seminar, generally offered twice each year at the start of the fall and spring semesters. There is no fee for enrollment in this three-day seminar, which is open to graduate students recommended by their academic unit heads, as well as new teaching assistants, who are required to attend.

Teaching assistants must be formally evaluated in writing by their supervisors. These evaluations are required for reappointment. The assistantship application deadline is January 15 for the fall semester. The application should be directed to the Office of Graduate Admissions.

Federal Assistance

A graduate student must be enrolled half time as a regular student in a degree program and must be a U.S. citizen or an eligible non-citizen to qualify for federal financial aid.

The graduate student must also complete the FAFSA, available online at www.fafsa.ed.gov and from the financial aid office. Although applications are accepted throughout the year, graduate students are encouraged to file before March 20 to ensure timely processing.

Students must reapply each year and maintain satisfactory academic progress as defined by the financial aid office to continue receiving federal assistance.

Federal Direct Stafford Student Loan: Interest does not accrue on subsidized Stafford loans while the student is in school, or during grace or authorized deferment periods. Students are responsible for all interest that accrues on the unsubsidized Stafford loan while in school, but payment is not required during this time.

Federal Direct Graduate PLUS Loan: A federal loan program for credit-worthy graduate students, intended to supplement the Federal Stafford Loan. A credit-worthy graduate student may borrow the complete cost of attendance minus other financial aid. The interest rate is fixed at 8.5 percent. Payments can be deferred till after graduation, but interest accrues while the student is in school. Graduate students must be U.S. citizens or permanent residents to be eligible. Students must enroll for a minimum of five credit hours per semester to be eligible (at least half time).

The following is a list of donated scholarships and is a representative sample of awards that may be available to admitted students. New students are encouraged to apply for admission before January 15. Early applicants will be considered for all types of financial aid administered by Florida Tech.

Fellowships/Graduate Awards

**Satisfactory Progress Standards for Financial Aid Recipients**

The academic records of all students admitted to Florida Tech for the first time shall be considered sufficient to allow them to apply for financial aid. To remain eligible to receive financial aid, continuing students must meet the following satisfactory progress standards instituted by Florida Tech in accordance with federal law. A review for compliance with these standards will be conducted at least once a year and at other times as required.

- Graduate students are expected to achieve and maintain a GPA of 3.0 or higher. This GPA is calculated in accordance with the guidelines contained in this catalog.
- Graduate students are expected to satisfactorily complete 80 percent of their attempted coursework. In general, full-time students should complete at least nine credit hours per semester, and part-time students at least five credit hours per semester. Florida Tech University Online full-time students should complete at least six credit hours per term. Part-time students should complete at least three credit hours per term. Courses with grades of F, I, AU or W are attempted courses but are not satisfactorily completed.
- Federal Regulations require students to complete their degree within 150 percent of the required credits.

**Tuition and Fees**

Tuition and other charges for 2011–2012 will not be finalized until approved by the university’s board of trustees in January 2011, and will be available thereafter at www.fit.edu/registrar/registration/tuitionchrgs.html. A hard-copy schedule of tuition and other charges may also be obtained by contacting Florida Institute of Technology, Office of Undergraduate Admission, 150 W. University Blvd., Melbourne, FL 32901-6975, or the Office of Student Financial Services at the same address.

Tuition for full-time Melbourne campus undergraduate students (12–19 credit hours) is charged on a semester basis. Semester tuition rates apply to the fall and spring semesters only. Summer tuition and tuition for part-time undergraduate students and all graduate students, except those seeking the Psy.D. degree, is charged on a credit hour basis.

Florida Tech University Online and Extended Studies Division students pay tuition on a per-credit-hour basis.

For students enrolled in flight courses, flight fees are charged in addition to tuition, through deposits made to the flight fees portion of the student’s Panther card account (see “Panther Access Card 1D and Debit Account” in this section). Flight training in all ratings is also offered to those who desire to proceed at an accelerated or slower pace relative to the AVF sequence. For information on courses and prices, please contact F.I.T. Aviation LLC, 640 S. Harry Sutton Road, Melbourne, Florida 32901.

**Payment Policy**

Students are assessed tuition and fees based on the locations and programs in which they are enrolled and the degrees being pursued. Students enrolled and pursuing degrees on the Melbourne campus are assessed the Melbourne campus tuition and fees. Students enrolled and pursuing degrees through the Extended Studies Division are assessed the Extended Studies Division tuition and fees. Extended Studies Division students at the Melbourne site pay Melbourne campus rates.

Students enrolled in programs and pursuing degrees through Florida Tech University Online are assessed the tuition and fees approved by the partnership.

In determining the amount due each semester, students may subtract any scholarships, loans or grants that are made directly payable to the university. Students may also subtract any payment plan (e.g., corporate reimbursement plan) under which payments are made directly to the university by sponsoring organizations, and for which the university has been notified in writing of the student’s eligibility and acceptance. The student is responsible for submitting all necessary paperwork and meeting all conditions on time.

All expenses, including tuition, fees, room and board, must be paid on or before the date shown in the academic calendar appropriate to the student’s admission status online at www.fit.edu or in the payment and fees policy at www.fit.edu/registrar/paymentpolicy each semester. Payments should be made online through the Panther Access Web System (PAWS) using the TRACKS account username and password established for each student after receipt of deposit and confirmation of intent to attend. Payments sent by mail should be mailed at least 10 days in advance of the payment due date to assure receipt by the payment deadline. Additional information regarding the university’s payment policy for Melbourne campus students can be found online or in the printed Schedule of Classes each semester. Payments should be addressed to Florida Institute of Technology, Office of the Controller, Attention: Student Accounting, 150 W. University Blvd., Melbourne, FL 32901-6975.

**Student Accounts**

**Melbourne Campus**

A nonrefundable tuition deposit of $300 is required of each new full-time Melbourne campus student to signify intent to enroll in a given semester and to ensure that the university reserves space in its classes. The deposit is applied to the first semester bill. It is considered a service fee covering the administrative cost of the matriculation process and is nonrefundable, should a student fail to register and/or enroll for the term accepted.

On payment of the initial tuition deposit, an account is established in the accounting office for the student, using the student’s name and the student number assigned by the university as the account identification. Parents desiring to remit payments to the university by mail are encouraged to do so provided the payment is mailed to the attention of student accounting in time to reach the university by the due date. All checks should show the student’s name and last four digits of the student number on the face of the check to assure proper credit to the student’s account.

If more money than required is remitted, any excess may be refunded. The cost of books should not be included in payments mailed to the university. Books and supplies are available at the college bookstore and can be purchased by cash, check, approved credit card or the Panther Access Card Debit Account. A student may charge bookstore purchases to his or her account with the university, provided it contains sufficient funds to cover such purchases. Students in aviation programs can obtain books at F.I.T. Aviation by Panther debit card, check or cash purchases. Students may view their current account statement online through their PAWS account.
Extended Studies Division
An account is established for each student on receipt of the application. The student’s name and number are used for account identification and should be included on the face of each payment check to ensure proper credit to the account. Students who pay more than the required amount can have the excess refunded or credited to their accounts.

All expenses, including tuition and fees, are due and are to be paid by each Extended Studies Division student at the time of registration unless specifically exempted.

Students may be registered and attend classes without payment at the time of registration if the student is sponsored by his employer who will make payments directly to the university and the employer has furnished a letter to the local Florida Tech office accepting unconditional liability for all charges not paid by the student, regardless of whether or not the student completes the course or achieves a minimum grade for the course; the student has a scholarship, loan or grant covering 100 percent of all costs that will be paid directly to the university by a sponsor who has made written notification to the local Florida Tech office in advance of the student’s eligibility and acceptance; or the student is eligible for a deferred payment of tuition through an approved payment plan.

Registration is made final only upon satisfaction of all charges. The university reserves the right to deny admission or to drop any student who fails to promptly meet his or her financial obligations.

Florida Tech University Online
Florida Tech University Online students should direct questions about payments and/or account to (800) 622-7344 (toll-free in the U.S.) or by e-mail to CustomerService@UniversityAlliance.com.

Payment Plans
Melbourne Campus and Extended Studies Division
The Panther Payment Plan allows students to divide costs over multiple payments. Details of the plan, including eligibility, critical dates and payment methods can be found in the student’s PAWS account or at the student financial services website at www.fit.edu/sfs.

Florida Tech University Online
Florida Tech University Online students should direct questions about payments plans to (800) 622-7344 (toll-free in the U.S.) or by e-mail to CustomerService@UniversityAlliance.com.

Registration Payment Deadline for Melbourne Campus
Registration is final only after satisfying all financial obligations. A student who is unable to pay by the due date, and has not made prior financial arrangements with the student financial services office, may have his or her registration canceled and the class seats made available to other students. The academic calendar in this catalog and online at www.fit.edu/registrar/calendar lists registration deadlines.

Delinquent Accounts
Melbourne Campus and Extended Studies Division
Each semester, students must meet all financial obligations due to the university, including tuition, fees, traffic/parking fines, library fines, etc. Tuition, housing, board and other charges are subject to audit at any time throughout the academic career of the student.

Students who do not make acceptable financial arrangements to pay after they have been notified of the amount due could have their current registrations canceled.

Students with delinquent accounts are not permitted to enroll in succeeding semesters, are not entitled to transcripts and will not be permitted to graduate until they have met all of their financial obligations to the satisfaction of the university. Additionally, student accounts with a balance due may be subject to finance charges and other fees.

Florida Tech University Online
Florida Tech University Online students should direct questions about delinquent accounts to (800) 622-7344 (toll-free in the U.S.) or by e-mail to CustomerService@UniversityAlliance.com.

Refund Policy
Florida Tech provides for a fair and equitable refund policy that meets all applicable federal guidelines governing refunds for tuition, room, board and applicable fees as published in the Federal Register. The refund policy for each student group (Melbourne campus, Extended Studies Division and Florida Tech University Online) may be found online and, for Melbourne campus students, is also in the Schedule of Classes before the start of each term.

Panther Access Card ID and Debit Account on Melbourne Campus
The Florida Tech identification card is an electronic access system that provides a variety of services to the student. It is required to register for classes, check materials out of Evans Library, conduct business with the cashier in the student financial services office and to attend certain university functions. The card also serves as a control for the various meal plans. The Panther Access Account is a convenient and cost-effective way to manage expenses while attending Florida Tech. The funds are always available and the card can be used at all food service locations, the online Groceries4U store, bookstore, soft drink and snack machines, washers and dryers, copy machines and printers, and at participating off-campus restaurants and stores. In addition, the card is used for after-hours access to many academic labs and other locations in campus facilities.

Funds may be pre-deposited or added at the student financial services office or the automated cash-to-card machine located in the library. Funds can also be deposited online from the Florida Tech home page by choosing “ Panther Card Online Deposits” under quick links. For additional information, please contact the campus services office at (321) 674-8076.

Banking and Check Cashing on Melbourne Campus
To have ready access to funds as needed, students are encouraged by the university to open a checking account in one of the local banks. A new student should bring a cashier’s check for deposit in the bank of their choice to avoid a waiting period before funds can be withdrawn. An automated teller machine (ATM) is located in the Denius Student Center.

The cashier in student financial services office will cash personal checks for students in amounts not to exceed $100 at prescribed times during the week. Checks returned for non-sufficient funds (NSF) will result in a fine being charged to the student’s account. If a second NSF check is returned, the student will lose check-cashing privileges. Students are encouraged to open bank checking
and ATM accounts so that they will have continuous access to their funds throughout the academic year.

**Student Accident and Health Insurance**

Domestic students who are enrolled for six or more credit hours may enroll in the university-sponsored student health insurance plan or waive this charge by showing proof of coverage under a parent’s/guardian’s or third-party accident and health insurance program from an employer or sponsor, etc. The waiver requires completing the waiver portion of the Student Health Insurance Enrollment and Waiver form. The completed Student Health Insurance Enrollment and Waiver form must be submitted to the Business and Retail Operations Office no later than 5 p.m. on the Friday ending the second official week of the semester.

The health insurance requirement is waived for students who complete waiver forms and provide proof of insurance. The waiver is in effect while the student maintains continuous enrollment at Florida Tech. In case of a change in personal insurance coverage, however, the campus services office must be notified immediately, and it will be necessary to either provide new proof of insurance or enroll in the Florida Tech insurance plan.

In all cases, full-time students (see “General Student Information” in the Academic Overview section for definition) who fail to submit the required documentation by the dates indicated are automatically billed and enrolled for student health insurance and are obligated for the entire academic year or any portion remaining at the time of registration.

Students seeking to enroll after the open enrollment period must provide documentation of involuntary termination of previous health insurance coverage.

International students should note there is no socialized or national system of health care in the United States and medical treatment is expensive. All Florida Tech students are required to have appropriate medical insurance coverage. As part of the tuition and fees, students will be charged for student health insurance. This means all students will automatically be covered through Florida Tech’s student health insurance plan.

It is MANDATORY for all international students to be covered by the university’s health insurance plan. Exceptions may be granted only if the student has an insurance plan that meets very strict requirements to qualify for the waiver. Students may request a waiver of this fee by completing and submitting a form to the Business and Retail Operations Office. Waiver forms are available from this office and the Campus Services office. Florida Tech will not accept coverage by an insurance company outside the United States. Before enrolling for coverage in an insurance plan other than Florida Tech’s student health plan, please check with the international student office to determine if it meets the waiver requirements. Waiver submission deadlines are the same as those for domestic students.

Full-time, degree-seeking domestic and all international students who are married or single parents, and who have one or more children living full time with them, may purchase health insurance for these dependents by completing the appropriate form at the campus services office, and paying for the additional insurance at the student financial services office.

Student health insurance fee is refundable if the student pays for the coverage and subsequently does not enroll at Florida Tech.

**Veterans Accounts and Benefits**

Florida Tech accepts all veteran education benefits including the Post 9/11–Chapter 33 GI Bill and participates in the Yellow Ribbon Program.

Veterans who receive allowances directly from the government are responsible for paying their fees and charges on the same basis as other students.

**Satisfactory Progress Standards for all Students**

Students receiving VA benefits are required to make satisfactory progress in their degree programs. All Florida Tech students are required to meet the academic standards and requirements as noted here.

Undergraduate students whose cumulative GPA falls below 2.0 at the end of any term will be placed on VA educational benefits probation for a maximum of two consecutive terms of enrollment. If the VA student’s cumulative GPA is still below 2.0 at the end of the second consecutive term of probation, the student’s VA educational benefits will be terminated. Failure of a graduate student to maintain the minimum cumulative GPA of 3.0 will also result in termination of VA educational benefits.

After VA termination, an appeal may be made to the VA for resumption of benefits. Based in part on the university’s recommendation, the VA will determine whether or not to resume the payment of educational benefits to the student.

**Melbourne Campus Students**

Veterans benefits for Melbourne campus students are administered by the Office of Veterans Affairs, located in the registrar’s office. Veterans and their dependents eligible to receive VA education benefits should contact this office after completing admission requirements.

For the purpose of certification of Melbourne campus students receiving VA benefits, the following credit hour standards are used:

<table>
<thead>
<tr>
<th>16-WEEK TERMS</th>

**Housing and Board**

Florida Tech has instituted an educationally based policy requiring all first-time full-time Melbourne campus students to reside in university residence halls and participate in one of the meal plans for two years.

All full-time Melbourne campus undergraduate students entering college for the first time are required to live on campus and enroll in a university meal plan for both years of residency. New and continuing students need to complete PantherPass online at https://pantherpass.fit.edu, which includes the freshman housing and meal plan contract.

A housing deposit must be on file in the student’s account before the student receives a housing assignment and remain on file for as long as the student lives in university housing. The deposit is not covered by any scholarship or financial aid and cannot be waived. It is refundable, minus any outstanding university charges, provided the terms and conditions of the housing agreement are fulfilled.

Students who sign Florida Tech Housing and Meal Plan Contracts are obligated for the entire academic year. All university housing contracts are for the full academic year. Neither buyouts nor substitutions are allowed. Students cannot cancel their housing and meal plan contracts after the deadline dates as outlined on the Housing and Meal Plan Contract.

First- and second-year, and new transfer students who withdraw before the start of the fall semester must notify the campus services office in writing, no later than July 1, if they want to have their housing deposits refunded. Students not attending or returning spring semester must notify the campus services office in writing, no later than December 1, if they want to receive a refund.

Upper-division students who want to change the meal plan portion of their contracts must submit a written request to the campus services office. Deadline dates are outlined on the Housing and Meal Plan Contract.

Changing meal plans after the cutoff dates is not permitted except for non-enrollment, official withdrawal, graduation or dismissal from school for the remainder of the academic year. However, a student may opt to increase a meal plan or add Flex Credits at any time.

**Residence Halls**

Students desiring a specific housing assignment may submit requests to the campus services office. Requests for room assignments are honored on a first-come, first-served, space-available basis. Campus services makes every attempt to grant requests for assignment to certain rooms and roommates. However, the university does not guarantee assignment to a specific type of accommodation, building, room or roommate. In all cases, students are billed based on the number of occupants registered for the room (double, single, etc.).

Because of the high demand for on-campus housing, the university reserves the right to place three students in any residence hall room. If the university exercises this option during the semester, the room occupants receive a prorated adjustment for the semester based on the number of days that triple occupancy occurred.

**Southgate Apartments**: Feature studios and, one-, two- and three-bedroom apartments, and are reserved for students with 24 or more earned credit hours. Occupancy ranges from one to four students per apartment, depending on the unit size.

**Columbia Village**: Features four-bedroom, fully furnished suites with efficiency kitchens. Four students are assigned to each suite.

**Harris Village**: Features one-, two- and four-bedroom, fully furnished suites with full kitchens (refrigerator, range and dishwasher). Occupancy ranges from one to four students per suite, depending on the unit size.

**Meal Plans**

Meal plans are offered by the university to make access to food service convenient and cost-effective, using the student ID card as the access card. Meal plans are contracted with individual students and the benefits are not transferable. All plans are contracted for the entire academic year. Meal plans consist of two major components:

**Meal Points**: Used for entry into Evans Dining, our “all you care to eat” dining room. As the meal points are used, the balance available declines until it reaches zero or is reset for the following week.

**Flex Credits**: Allows the meal plan holder to access goods and services from any dining location, including vending machines, pizza delivery and Groceries4U. Flex Credits represent available access and have no residual cash value. Flex Credits balances carry forward from fall semester to spring semester. Any balance remaining at the end of spring semester is forfeited.
**ACADEMIC OVERVIEW**

**GENERAL STUDENT INFORMATION**

**Registration**
Students must be properly registered and have their tuition and fees paid for all courses they are attending. No student shall be permitted to attend a class without processing a registration form, regardless of whether that class is being taken for credit, audit or continuing education units (CEU).

**Melbourne Campus and Extended Studies Division**
The Panther Access Web System (PAWS) enables enrolled students at Florida Tech to use the Internet to register for classes, make schedule changes, and access and print their academic and personal information. Students may view and print course descriptions, semester class schedules, address and telephone information, all grades to date and a financial account summary by term, in addition to making payments. The PAWS home page may be accessed from the Florida Tech home page at www.fit.edu or directly at www.fit.edu/paws. Obtaining access to student-specific information on PAWS requires a TRACKS account username and password assigned to students by the institution.

**Florida Tech University Online**
Registering prior to admission allows students to begin classes while gathering all application components. Students are required to complete the online application and submit the required documents. Students may register for up to two consecutive 8-week terms before being fully admitted.

Registering before admission and pending formal acceptance requires a determination of a high probability of eventual acceptance into the program applied for and that registration before admission is in the best interest of both the academic unit and the student.

Students who register before admission are not eligible to receive federal student financial aid until fully admitted to the university. Such registration requires a preliminary review of written documentation from the degree-granting institution (not necessarily official) showing previous academic courses taken, grades received and degrees awarded. In the event that applicants are denied admission while enrolled in graduate courses, they will be given the option of either withdrawing with full tuition refund or completing the courses underway. If the applicant completes one or more graduate courses before being denied admission or completes a course for any other reason, he or she will not be given the option of withdrawing or receiving a tuition refund after completing the course.

**Definition of Full Time/Part Time**

**Melbourne Campus**
A Melbourne campus undergraduate student is considered full time each term if he or she is enrolled for 12 or more credits, half time for six to 11 credits and less than half time for one to five credits. A graduate student is considered full time when enrolled for nine or more credits, half time with five to eight credits and less than half time with one to four credits. See “Veterans Accounts and Benefits” for credit hour standards used for certification of students receiving veterans educational benefits.

**Florida Tech University Online**
For the purposes of reporting and financial aid, Florida Tech University Online students are considered full time if enrolled for six credits, half time for three credits and less than half time for fewer than three credits per term.

Florida Tech University Online undergraduate students are strongly encouraged to limit their enrollment to two courses per 8-week term. An additional class may be requested for a maximum course load of nine credit hours per term by contacting the academic unit head of the major degree program in which the student is enrolled.

**Extended Studies Division**
The graduate student policy above under “Melbourne Campus” applies equally to Extended Studies Division students.

**English Language Proficiency**

**All Students/Campuses**
English language proficiency is required of all students whose home language is not English and who are taking academic courses at Florida Tech.

See “Languages and Linguistics” under the College of Psychology and Liberal Arts in the Degree Programs section for information on acceptable proof of English proficiency, the availability of TOEFL examinations online and on campus, and on help with English proficiency provided by Florida Tech to students whose home language is not English.

**Demonstrating English Proficiency**
English language proficiency is not required for admission, but enrollment in academic courses will be limited for all whose home language is not English until proficiency can be demonstrated. See “Languages and Linguistics” under the College of Psychology and Liberal Arts in the Degree Programs section for more information, along with references to the Florida Tech courses available to help establish proficiency.

**Student Advising**
Each student is assigned an academic adviser in his or her major academic unit at the beginning of the first semester or term of attendance. The academic adviser monitors the student’s academic progress toward a degree. A conference is held with each student before registration to ensure courses are scheduled in proper succession, all relevant academic policies are adhered to and the schedule best serves the academic needs of the student. Once arranged, scheduled courses for undergraduates cannot be changed without the academic adviser’s written permission, except for changes between sections of the same course before the end of the first week of class. The academic adviser is available throughout the academic year for consultation by appointment, and students are strongly encouraged to seek the counsel of their academic adviser in other matters beyond registration and schedule changes.
Florida Tech University Online students are advised by the online coordinator or academic program chair of their major.

Extended Studies Division students should contact their program chair or the site director at their location for advising issues.

**Transcripts**

All courses taken at Florida Tech are indicated in chronological order on the student’s academic transcript. A request for a transcript may be made in writing to the Office of the Registrar, Records Unit, with the appropriate fee enclosed, by logging in to PAWS or by fax to (321) 674-7827. Students with holds on their accounts will not be able to order transcripts online.

**Grade Point Average (GPA)**

A student’s academic standing is expressed by the cumulative GPA, determined by dividing the total number of grade points earned at Florida Tech by the total number of credit hours attempted. The number of grade points for each course is the product of the credit hours for the course, and A = 4, B = 3, C = 2, D = 1, F = 0. Plus and minus grades (e.g., B+) are not used at Florida Tech. The GPA is truncated at three digits. In the case of multiple degrees earned as a graduate student, the transcript reports both an overall GPA for all courses taken, and program GPAs based on courses that apply to each degree.

Undergraduate and graduate GPAs are never combined. An undergraduate student who takes a graduate course and wishes it to be included on his or her undergraduate transcript must submit a written request to the registrar’s office. Once the graduate course has been included on the undergraduate transcript it cannot be used toward fulfillment of the requirements of any graduate degree, except in the case of students participating in an accelerated master’s program. Accelerated or fast track programs are not available in all majors or colleges.

**Notification of Grades**

At the end of each semester (or 8-week term for Florida Tech University Online students), the registrar’s office notifies enrolled students of grades earned by posting them to the student’s records in PAWS. These grades become a part of the permanent record and are not subject to change, except on authorization from the instructor, academic unit head and respective dean.

**Melbourne Campus**

During the ninth week of classes, Melbourne campus students not making satisfactory progress in 1000- and 2000-level courses are notified of their status by mail.

**Florida Tech University Online**

Florida Tech University Online students receive an electronic communication if their progress is unacceptable.

**Incomplete Work**

An I is given when a course cannot be completed because of circumstances beyond the student’s control. The I indicates the coursework is qualitatively satisfactory and there is a reasonable expectancy that completion of the remaining work would result in a passing grade. The instructor must provide a statement of the work to be completed to the head of the academic unit. The student must complete the work at the earliest possible time but before the beginning of the seventh week of the following semester (fourth week for Florida Tech University Online), unless an earlier deadline is established at the time the I is recorded and the student is notified of this fact.

A waiver of the six-week time limitation requires written permission of the cognizant dean. The I will automatically become an F in the seventh week (fifth week for Florida Tech University Online) unless an approved waiver with a satisfactory completion date has been received by the registrar’s office.

College of Aeronautics flight courses (AVF) are exempt from the six-week time limit. Effective Spring 2011, flight courses still carrying an I after one calendar year will automatically become an F unless a waiver stating a satisfactory completion date signed by the director of FIT Aviation LLC and approved by the dean of the college has been received by the registrar’s office.

**Petition to Graduate**

A student planning to receive any degree must file a Petition to Graduate no later than the date shown in the academic calendar appropriate to their admission status (Melbourne campus, Extended Studies Division or Florida Tech University Online). Students filing petitions after the due date are subject to a late fee and may not be able to graduate as planned because of insufficient time to verify completion of requirements. Petitions are available online (www.fit.edu/registrar/forms), from the registrar’s office or from the respective academic unit or Extended Studies Division site. A petition to graduate must be accompanied by a degree/program plan signed by the academic unit.

**Drop/Withdrawal Policy**

Students are responsible for maintaining written evidence of all drops/withdrawals. Telephone and e-mail drops/withdrawals will not be accepted. Failure to attend classes or verbal notification to instructors does not constitute an official drop or withdrawal. Students who drop or withdraw without filing the proper form will receive a failing grade of F.

**Melbourne Campus and Extended Studies Division Students**

To add or drop a course, or withdraw from the university, a student must complete a Change in Registration Status form. Melbourne campus students withdrawing from the university are asked to complete a withdrawal survey in the Registration Center. Extended Studies Division students are asked to complete the survey in the student’s site office.

Failure to attend classes or verbal notification to instructors does not constitute an official drop or withdrawal. Students who drop or withdraw without filing the proper form will receive a failing grade of F. When a Melbourne campus or Extended Studies Division student drops a course during the first two weeks of class (except in a summer term) the course will not appear on the permanent academic record.

After this date, a W will appear on the permanent record for each dropped course. The W is not used in the computation of the semester and cumulative grade point average. The last day to drop a course without receiving a failing grade is published in the academic calendar.
Florida Tech University Online Students

Students must withdraw through PAWS. Students can drop a course through the end of the first week of classes without receiving a grade of W. From the end of the first week through the end of the sixth week, a grade of W will be assigned. That grade will be reflected on their transcript, but not calculated into a grade point average. Withdrawals after week six will result in the grade earned in the class. To initiate a withdrawal from an online class, students must log into PAWS at www.fit.edu/paws.

Withdrawals during week one are considered drops. A grade of "W" is not added to the transcript. Florida Tech University Online students can drop a course through the end of the first week of classes without receiving a grade of W.

If a Florida Tech University Online undergraduate student withdraws from Mastering eLearning (ASC 1006), a graded degree requirement for all Florida Tech University Online undergraduate degree programs, they will be required to register for it the next term they take courses. After three course withdrawals, a student will be placed in the lowest level mathematics and communication courses, usually determined by the diagnostic assessments from ASC 1006.

Readmission Policy

A student who has been away from the university for two years, or four or more consecutive full-length semesters (12 or more 8-week terms for Florida Tech University Online students and excluding Melbourne campus and Extended Studies Division summer terms) or who has attended another institution during an absence from the university must apply for readmission. If readmission is approved, the degree requirements in place at the time of readmission, or later with academic approval, must be met. A student is not considered absent from the university during a period of study at another institution if a Request to Study at Another Institution form was submitted and approved before enrollment for the other institution's courses. A student who has been away from the campus for less than four semesters (12 8-week terms for Florida Tech University Online students) and who has not attended any other college or university may register for class without filing an application for readmission.

A student who leaves the university for military service will be readmitted with the same academic status he or she had when last in attendance at Florida Tech. This rule is binding as long as the student's length of absence from the institution has not exceeded five years.

For students attending under the Service Members Opportunity College (SOC) Degree Network System (DNS), breaks-in-attendance of two years or fewer will not invalidate the DNS Student Agreement, nor will the student's activity be defined by the unit head's discretion.

Appeal procedures for students who have been academically dismissed and seek reinstatement are described under "Probation and Dismissal" in this section.

Course Numbers Defined

A Florida Tech course number consists of three subject code letters followed by a four-digit number. Numbers beginning with 0 are developmental in nature and do not count toward a degree. Numbers beginning with 1, 2, 3 and 4 indicate undergraduate courses, and those beginning with 5 and 6 indicate graduate courses. Graduate students may take 3000- and 4000-level courses, subject to limitations and restrictions delineated in graduate policy. 5000-level courses are intended for master's and doctoral students. Courses with numbers beginning with 6 may only be taken by students enrolled in doctoral degree programs.

Credit Hours Defined

The credit-hour value of each course normally represents the number of hours in lecture per week during a full-length semester. Because there are exceptions to this general rule, particularly for laboratory periods, students should consult online in PAWS or the Course Descriptions section for the credit value of specific courses.

Course Cancellation/Schedule Changes

The university reserves the right to cancel classes for which there is insufficient enrollment, to close a class when the enrollment limit in that class is reached and to make schedule changes as necessary, including changes in time, days, credit or instructor. The university does take the needs of students into account and schedule changes are made only when unavoidable.

Course Substitution

Course substitutions or any other deviation from the stated requirements of a degree offered at Florida Tech must have the written approval of the student's academic program chair or academic adviser, and the academic unit head.

Continuing Education

A continuing education (CE) student is defined as one who is not seeking a degree from Florida Tech. CE students will customarily enroll for courses on the basis of receiving continuing education units (CEUs), rather than graduate or undergraduate credit. The CEU is a nationally recognized unit that indicates successful participation in a qualified program of continuing education. It is defined as 10 contact hours of participation in an organized educational experience under responsible sponsorship, capable direction and qualified instruction.

Students enrolled for CEUs in courses that are being offered for academic credit are required to do all homework, outside reading assignments, term papers or special assignments and to attend at least 90 percent of the class sessions, but they are not required to take midterm or final examinations.

In some situations, the CE student may want or need to receive credit rather than CEUs, and this alternative is allowable. Students enrolled for credit, whether degree-seeking or not, must take all examinations in addition to completing all course assignments. Students may switch from CEU to credit or vice versa, any time before the end of the first week of classes.

A CE student may not enroll in any course, either for credit or for CEUs, without the written approval of the head of the academic unit offering the course. This approval will be based on a review of the student's previous preparation and qualifications, an assessment that the student is capable of completing all course assignments (homework, reading, term papers, etc.) and may also take into consideration the effect of enrollment of CE students on the course and/or academic program. Such approval will be sought and given on a course-by-course basis, and may be withheld at the academic unit head's discretion.
A CE student may seek admission to a degree program through the normal admission process. If a CE student subsequently decides to pursue either an undergraduate or graduate degree at Florida Tech and is accepted into that degree program, a maximum of 12 semester credit hours earned as a CE student may be applied toward the degree, provided the coursework is academically appropriate.

**Directed Study on Melbourne Campus or Extended Studies Division Sites Off-Campus**

Directed study is a means of allowing a student to register for a course during a semester when it is not included in the online or printed Schedule of Classes. To enroll in a directed-study course, a Request for Directed Study Course form should be initiated and approved according to form instructions. Approval is at the discretion of the academic unit head or program chair responsible for the course, and normally requires evidence of a compelling need by the student. The student should submit the approved form to the Registration Center during normal registration hours. The tuition rate for a directed-study course is the standard undergraduate or graduate rate, plus an additional directed-study fee.

**Auditing Classes**

**Melbourne Campus**

A student may audit a course with the permission of his or her academic adviser and payment of an audit fee. The audit fee is waived for full-time undergraduate students. An auditor does not receive a grade; an AU is recorded on the transcript in place of the grade if the auditor has, in general, maintained a satisfactory course attendance (usually 75 percent class attendance) and completed the appropriate assignments. If the student does not meet requirements, a final grade of F may be awarded. No changes in registration from credit to audit or from audit to credit will be permitted after the second week of classes. Students must register for audit at the Registration Center.

Auditing classes is not available to Florida Tech University Online students due to the fully-interactive nature of the online degree programs.

**Senior Citizen Program**

The senior citizen program allows individuals age 65 and over to enroll in courses for credit or audit without charge. Participation in this program is restricted to individuals who are seriously committed to learning and to courses taught on the Melbourne campus in Florida.

A prospective student wishing to enroll in the senior citizen program must apply for admission as a nondegree-seeking student and be admitted. All records of any prior postsecondary coursework must accompany the application. Copies of transcripts are acceptable in lieu of official transcripts. If no previous postsecondary coursework was completed, proof of high school graduation is required.

A brief statement of “Qualifications through Life Experience” may be submitted with the application. A statement of educational goals and a determination by the appropriate admission office (undergraduate or graduate) that the applicant’s educational and life experience history supports a reasonable expectation of successful accomplishment of those goals are necessary.

Enrollment is permitted based on space availability, following the last day of class in the preceding semester or summer term.

**Release of Student Information**

The Family Educational Rights and Privacy Act of 1974 (FERPA) as Amended established a set of regulations governing access to and the release of personal and academic information contained in student education records. FERPA applies to the education records of persons who are or have been in attendance in postsecondary institutions, including students in cooperative or correspondence study programs. FERPA does not apply to records of applicants for admission who have been denied acceptance or, if accepted, do not attend an institution.

Education records are all records that contain information directly related to a student and are maintained by an educational agency or institution, or a party acting for the institution. Exceptions to education records include sole possession records, law enforcement unit records, employment records, health records and alumni records. Rights under FERPA are not given to students enrolled in one component of an institution who seek to be admitted in another component of the institution.

Under FERPA, the rights accorded to parents transfer to students who have reached the age of 18 or who attend a postsecondary institution. These rights are:

1. The right to inspect and review their education records within 45 days of the day the university receives a request for access. Students should submit to the registrar, dean, head of the academic unit or other appropriate official, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be made.

2. The right to request amendment of the student’s education records the student believes are inaccurate or misleading. A student should write the university official responsible for the record, clearly identify the part of the record they want changed and why it is felt to be inaccurate or misleading.

FERPA was not intended to provide a process to be used to question substantive judgments that are correctly recorded. The rights of challenge are not intended to allow students to contest, for example, a grade in a course because they felt a higher grade should have been assigned.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

3. The right to consent to disclosure of personally identifiable information contained in the student’s educational records, except to the extent that FERPA authorizes disclosure without consent. One exception that permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is a person employed by the university...
in an administrative, supervisory, academic or research, or support staff position, including law enforcement unit personnel and health staff; and a person or a company with whom the university has contracted, such as attorney, auditor or collection agent (includes consultants, volunteers and other non-employees performing institutional services and functions).

Disclosure is defined as permitting access to or the release, transfer or other communication of the educational records of a student or the personally identifiable information contained therein to any party orally, in writing, by electronic means or by any other means. Disclosure of confidential information to a school official having a legitimate educational interest does not constitute authorization to share that information with a third party without the student’s written permission.

FERPA allows release of the following directory information to the public without student consent: student’s name, address, telephone number, date and place of birth, major field(s) of study, e-mail address, participation in officially recognized activities and sports, weight and height of athletic team members, dates of attendance, part-time or full-time status, degrees and awards/honors received and the most recent educational institution attended other than Florida Tech.

Students may prevent the release of directory information by completing a Request to Prevent Disclosure of Directory Information form available online and from the Office of the Registrar. By law, however, a student cannot prevent the release of directory information to the U.S. military for recruiting purposes.

Student consent is required for the release of personally identifiable information such as semester grades, academic record, current academic standing, class schedules and Social Security/student number. Student consent is not legally required for disclosure of this information to certain government agencies/officials, sponsoring agencies and to selected university personnel determined to have a legitimate educational interest in such records. Reports of alcohol or drug policy violations by students under the age of 21 may also be released to those entities.

The university may exercise discretion in releasing personally identifiable information.

Students may consent to release personally identifiable information to others by completing the Authorization for Release of Student Information form available online and from the registrar’s office.

Information about the provisions of the Family Educational Rights and Privacy Act of 1974 as Amended, and the full text of the law, may be obtained from the registrar’s office.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Florida Tech to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:
   Family Compliance Office
   U.S. Department of Education
   400 Maryland Ave., SW
   Washington, DC 20202-4605

The Solomon Amendment established guidelines for the release of directory information to the United States military for recruiting purposes. This Congressional act allows release of the following directory information without student consent to military recruiters for present and previously enrolled students at least 17 years of age: student name, address, date and place of birth, telephone number, level of education, major field(s) of study, degrees received and the educational institution in which the student was most recently enrolled.

**Student Right to Know**

Florida Tech is in compliance with both the Student Right to Know Act of 1990 and the Campus Awareness and Campus Security Act of 1990.

Data in compliance with the Student Right to Know Act can be found online in the university’s Student Handbook. The Office of Campus Security keeps statistics on compliance with the Campus Awareness and Campus Security Act. These statistics can be found on the university website and are published and distributed to the university community on an annual basis. They are also available on request to other interested parties.

**Campus Standards, Behavior and University Discipline**

A comprehensive system of rules, regulations and campus code of conduct is published each year by the Office of the Dean of Students. Students are expected to familiarize themselves with these policies and to adhere to them.

Students who violate the university code of conduct, the student housing rules and regulations or any other published university regulation are subject to disciplinary action by the university.

Students who are found to be responsible for serious violations of university policy are subject to dismissal.

Disciplinary matters are the responsibility of the Dean of students.

**Academic Integrity**

Florida Tech views acts of cheating, plagiarism and academic dishonesty very seriously. The penalties for any type of dishonesty are at the instructor’s discretion in conjunction with student’s college dean. Depending on the severity of the infraction, the penalties for acts that seem intentional range from a failing grade of F (0 points) on the assignment to a failing grade of F for the course. Severe acts that seem intentional will be forwarded to the dean of students with a recommendation for formal disciplinary action. Any act of dishonesty will be documented for future reference in the student’s academic file.

Faculty have access to www.turnitin.com. This online tool is used to determine if plagiarism has occurred and may be used at the discretion of the faculty member for any assignments, required coursework and tests.

Academic honesty is highly valued in all Florida Tech’s courses, whether in the classroom or online. The student must always submit work that represents original words or ideas. If any words or ideas are used that do not represent those original words or ideas, the student must cite all relevant sources and provide a clear definition of the extent to which such sources were used.

Words or ideas that require citation include, but are not limited to, all hard copy or electronic publications, whether copyrighted or not, and all verbal or visual communication when the content of such communication clearly originates from an identifiable source.
In a Florida Tech online course, all submissions to any public meeting (bulletin board or private mailbox) fall within the scope of words and ideas that require citations if used by someone other than the original author.

Academic dishonesty could involve:
- Having a tutor or friend complete a portion of the student’s assignments
- Having a reviewer make extensive revisions to an assignment
- Copying work submitted by another student to another public class meeting
- Using information from online information services without proper citation

Any of these practices could result in charges of academic dishonesty.

The complete student conduct policies may be found in their respective areas online.

UNDERGRADUATE STUDENT INFORMATION

Application Requirements

First-Year Melbourne Campus Admission

The Office of Undergraduate Admission carefully reviews all candidates for admission, using evaluation criteria to determine a student’s ability to complete several years of rigorous study. Applications are reviewed with reference to specific degree programs or for admission to first-year programs in General Engineering, General Science or General Studies. In addition to a completed application for admission, applicants must submit:

- Transcripts indicating a strong high school curriculum and achievement in college preparatory classes
- SAT or ACT results for current high school students and students who have graduated from high school in the past two years
- Two letters of recommendation from counselor and/or teacher
- An essay

The required documents will be used to determine the potential for success in an applicant’s chosen field of study.

Participation in special classes, clubs or teams that involve research projects/opportunities and advanced problem-solving techniques is encouraged and should be indicated in the application process.

Although an admission interview is not required, campus visits and interviews with admission counselors are highly recommended. An interview, mid-year grades or additional testing may be requested at interviews with admission counselors.

Florida Tech accepts applications throughout the school year. Students may submit an application any time after the end of their junior year of high school. It is recommended that applicants for the fall semester submit all application materials as soon as possible after starting their senior year in high school and completing the SAT or ACT. For full academic scholarship consideration, applicants for the fall semester should submit all application materials by January 15. Each applicant will be notified of an admission decision as soon as possible after the applicant’s file is complete and evaluated.

Florida Tech University Online

General admission requirements for students applying for an associate of arts or a bachelor of arts degree are as follows:

Any student with an accredited high school diploma or a General Equivalency Diploma (GED) is eligible to enroll. Students must be 22 years of age or in active U.S. military service. The applied psychology, criminal justice and computer information systems degree programs are excluded from the age requirement. Students are required to take a minimum of the last 25 percent of credit hours while enrolled through Florida Tech in order to receive an associate’s or bachelor’s degree.

Admission Guidelines

Melbourne Campus

Applicants must demonstrate readiness to succeed in a challenging academic curriculum. The transcript from a regionally accredited or state-approved high school is the most important element of the application. While no minimum grade point average, class rank or standardized test score is specified, these measures must indicate a readiness for college studies in a chosen academic program. An applicant who is a U.S. citizen must have earned a high school diploma from a regionally accredited or state-approved high school or a high school equivalency diploma (GED) by the date of first enrollment. All offers of admission are tentative if the student has high school or collegiate coursework in progress. Final admission is dependent on receipt and review of the student’s final transcripts.

Science and engineering applicants should complete four years of mathematics, the minimum level including trigonometry, mathematics analysis, analytical geometry or precalculus. Science and engineering applicants are also expected to have taken four years of science, to include physics and chemistry. The committee recommends students take the most rigorous mathematics and science curriculum offered by the high school.

Applicants for aeronautics, business, psychology and liberal arts majors must complete at least three years of mathematics. A fourth year of mathematics is highly recommended. Applicants for these majors must also complete at least three years of science, with a fourth year recommended.

A home schooled applicant must submit a transcript of academic work including an assessment of the level attained in mathematics and science, and the texts that were used; a self-descriptive, one-page essay that includes academic, community and athletic accomplishments, career goals and work experience; SAT or ACT scores and two letters of recommendation. It is recommended that a GED be obtained before matriculation. Although SAT II (Subject Exam) scores are not required, it is strongly suggested that SAT II results in mathematics (level 2), chemistry, physics and literature be submitted.

Applicants who present GED scores must also present secondary school records and standardized test scores.

Florida Tech University Online

Students may enroll for up to two consecutive 8-week terms before being fully admitted. Full admission is satisfied once all submitted material including official transcripts has been received and evaluated by Florida Tech. Students should complete the following steps:
1. Complete the online admission application and submit the one-time $75 nonrefundable application fee.

2. Provide official transcripts from regionally accredited high school graduation or GED, if applying with less than 24 semester college credits completed at a regionally accredited institution.

3. Official transcripts are required for all students seeking admission to a Florida Tech online degree program. Provide official transcripts of all current or previously attended colleges and universities. These transcripts will be requested on the student’s behalf as part of the application process.

4. Provide official records for advanced testing/external examination credit (i.e. CLEP, advanced placement examinations).

Students with credit hours from other institutions will automatically be evaluated for transfer credit as a part of the application process. Only courses with a grade of C or better received from a regionally accredited college or university will be considered for transfer credit (see “Classification of Florida Tech Online Students” in this section).

All incoming degree-seeking students are required to take diagnostic assessments in mathematics and English to determine the appropriate academic requirements and classes.

Only fully admitted students are eligible for federal financial aid (Stafford loans). The full application is required if financial aid will be requested.

Transient Students

Transient students are those students who are using Florida Tech to meet requirements for their home institution. Florida Tech allows these students to enroll in up to two consecutive 8-week terms by following the transient student admissions process that includes an application, an application fee and a copy of their current university transcripts. Transient students are not required to take Mastering eLearning (ASC 1006) or complete diagnostic assessments.

International Students on Melbourne Campus

Florida Tech is authorized under federal law to enroll non-immigrant students. Florida Tech provides a certificate of eligibility (I-20) to all admitted international students. The form is used to apply for the F-1 student visa. It also verifies to U.S. immigration officials the students are academically qualified to attend Florida Tech and has sufficient funds to cover the first year of study and that subsequent funds will be available for the future. Students must demonstrate proof of financial support at the time of application. Florida Tech policy states that students are required to attend for one full semester when entering the United States on a Florida Tech-provided I-20 form. Florida Tech will not release a student to another educational institution until the student completes one semester at Florida Tech (see “Office of International Student and Scholar Services” in the Institution Overview section).

Transfer Students

Applicants to Florida Tech must demonstrate readiness to succeed in a challenging academic curriculum. Transcripts are the most important element of the application. While no minimum grade point average is specified, the student’s GPA must indicate a readiness for college studies in a chosen academic program.

Transfer applicants must provide official transcripts from any and all colleges and universities attended. Students who have earned less than 24 semester credit hours will be evaluated as a first-year candidate (see “Application Requirements for First-Year Admission” in this section). Admission will be granted to those applicants who have completed appropriate coursework that indicates progress toward their chosen field of study.

Special High School or Community College Dual Enrollment

Upon application, Florida Tech may grant “special status” to an outstanding junior or senior enrolled in a high school in Brevard County, or an outstanding community college student from Brevard Community College or Indian River State College. Enrollment is on a reduced tuition basis and allows students to take up to a maximum of 12 credit hours. Registration is on a class-by-class space-available basis. Interested students should contact Florida Tech’s undergraduate admission office for application materials and the policy agreement.

Admitted Students on Melbourne Campus

Merit-based scholarships are determined at the time of admission to Florida Tech and are based on past academic performance (SAT or ACT1 results and GPA). Applications must be received by January 15 to be considered for Florida Tech’s merit scholarship program. To maximize opportunities for all types of assistance including federal, state and university need-based grants, it is recommended that students submit a FAFSA by March 1 of the academic year in which they wish to enroll. A copy of the student aid report should be sent to Florida Tech (list the Florida Tech Title IV code (001469) on the FAFSA).

Florida Tech subscribes to the College Board candidates’ reply date of May 1. A $300 nonrefundable tuition deposit is required as a means of confirming a student’s intention to attend Florida Tech. Payment is due by May 1. If the student is admitted after May 1, or for the spring or summer term, payment within 30 days of the date on the acceptance letter is required. The deposit guarantees a place in the entering class in the indicated major/program and is applied to the student’s account. In addition to the nonrefundable tuition deposit, admitted students must also submit the ”Attendance Confirmation” form included with the acceptance packet.

Entering first-year students can qualify for advanced standing by earning academic credit through any of the following programs:

- Advanced Placement Exams (AP) administered each May by the College Board (must receive a score of 4 or 5)
- International Baccalaureate (IB), based on an IB diploma, or a score of 4 or higher on the HL IB examinations
- Cambridge Advanced-Level Examinations (A-levels)
- Dual enrollment at a regionally accredited college, university or community college

Official results of these examinations or college transcripts must come directly to Florida Tech from the examination board or college attended. The credit Florida Tech awards for each examination can be found through www.fit.edu/ugrad/exams.

Once admitted to the university, incoming students are assigned a TRACKS account username and password allowing access to Panther Pass. Panther Pass (https://pantherpass.fit.edu) is an online orientation portal that guides newly admitted students
through all mandatory tasks required between acceptance and university orientation.

Examinations for Credit or Placement

Placement Examinations for Melbourne Campus Students

Placement examinations are administered online by the Academic Support Center to new freshmen before and during the orientation period each semester. Academic credit can be earned on the basis of these examinations if the result is placement into a more advanced course than an entry-level course in the same field, as designated in the student’s published program.

There are two mathematics examinations given for specific majors. Depending on the incoming student’s major they will be required to take the College Algebra Readiness Examination or the Calculus Readiness Examination. These examinations determine readiness for the mathematics courses required in the student’s degree program and can result in the award of advanced standing credit. A low score necessitates the student taking one or more preparatory courses before enrolling in the first mathematics courses listed as part of the program. A very high score can result in an invitation for further testing to determine if additional credit is warranted.

The communication examination is required for new freshmen, and for all new transfer students except those who have received transfer credit for Composition and Rhetoric (COM 1101).

Many students entering Florida Tech are sufficiently proficient to qualify for advanced placement above the entrance level. Currently those advanced placements are in chemistry, physics and computer science. A qualified student should contact the academic program, academic adviser or the Office of Academic Support Services to discuss advanced placement examinations in these areas.

International students and students whose home language is not English must have documented proficiency in English (either through submitted writing samples, TOEFL or placement examinations or a combination of these) before making the transition from English as a Second Language (ESL) courses to Basic Writing for ESL Students (COM 0100), Basic Writing Skills (COM 0110) or Composition and Rhetoric (COM 1101).

Diagnostic Assessments for Florida Tech

University Online Students

All undergraduate degree-seeking students are required to complete certain diagnostic assessments during the first 8-week term and no later than the end of the third week of classes. Academic credit is not earned on the basis of diagnostic assessments. The assessments aid in placement of the student in the correct level of courses as designated in the student’s published program plan.

As a requirement for Mastering eLearning (ASC 1006), all degree-seeking students must complete diagnostic assessments as assigned, without regard to transfer credits awarded or transfer credits under evaluation. Any transfer credit officially awarded will supersede scores received through diagnostic assessments.

Equivalency Examinations for Melbourne Students

These examinations are administered by academic departments to allow an undergraduate student to demonstrate proficiency in courses offered at the university. They are used with new students to evaluate advanced standing and to reconcile issues involving transfer credits. Specific limitations apply:

1. Students may not take an equivalency examination for any course
   a. for which they have been evaluated by a prior placement or equivalency examination;
   b. that is a prerequisite or a deficiency for a course for which they have received credit,*
   c. in which they have received a grade, including a W (withdrawal) or AU (audit);
   d. in which they are currently enrolled beyond the first week of classes; or
   e. that is a prerequisite for a course in which they are enrolled after the first week of classes for that course.*

2. Students may not take an equivalency examination for any course during the semester in which they have petitioned to graduate.

3. Equivalency examinations are not available for some courses. Information about excluded courses is available in each academic unit office. All humanities elective courses are excluded.

4. Equivalency examinations are not available for graduate-level courses, even if the purpose would be to apply the credit toward a bachelor’s degree, nor are equivalency credits earned for an undergraduate course applicable toward a graduate degree.

*An exception will be made for a transfer student during the first semester at Florida Tech following the semester in which the student has been officially notified of transfer-credit evaluation.

Advanced Placement Program (AP)

Credit is awarded for the College Board Advanced Placement Program (AP) examinations on which a student scores four or higher, as detailed below:

College-Level Examination Program (CLEP)
Florida Tech grants academic credit for Subject Examinations only. To receive credit, the minimum score must be equal to or above the recommended percentile as published by the American Council on Education (ACE). CLEP examinations are not administered on the Florida Tech campus. Florida Tech University Online students should e-mail tceu@fit.edu for further information.

Florida Tech expects students to take any CLEP examination before enrollment. Although a student may take these examinations while enrolled at Florida Tech, they may do so only with the permission of their major department and college dean. Credit earned from CLEP is excluded from the three-course limit that applies to the study at another institution policy. Contact the registrar’s office for further information.

International Examinations
Credit is awarded for grades of four or higher in the International Baccalaureate (IB) program for higher-level examinations and certain standard-level examinations for IB diploma holders. Based on a review of the subject areas and scores, credit is also awarded for receiving a C or better for the British GCE examinations at the advanced level (A-level), or for the Caribbean Advanced Proficiency Examinations (CAPE) when two units are completed.

ACE/DANTES Examination Credit
Credit is only considered for Military Course Completions and only when listed on an official ACE SMARTS or AARTS transcript. Credit is awarded based on ACE recommendation and Florida Tech transfer credit policy.

Credit is considered for DANTES Subject Standardized Tests (DSST) and CLEP subject area exams through DANTES listed on an official DANTES transcript. Credit is awarded based on ACE recommendation and Florida Tech transfer credit policy.

Florida Tech expects students to take any ACE/DANTES examinations before enrollment. Although a student may take these examinations while enrolled at Florida Tech, they may do so only with the permission of their major department and college dean. Credit earned from ACE/DANTES is excluded from the three-course limit that applies to the study at another institution policy. Contact the registrar’s office for further information.

Transfer Credit
Florida Tech operates on the semester system. To convert credit hours transferred in from a quarter-system institution into semester credit hours, the number of quarter hours is divided by 1.5.

Undergraduate transfer credit may be awarded for courses taken at a college or university accredited by a regional accrediting association in the United States, or with equivalent recognition in the case of a college or university elsewhere. Flight credit is transferable subject to FAA rules for transferability between schools.

Any student who transfers to Florida Tech with an Associate of Arts degree from a regionally accredited institution in the U.S. automatically meets Florida Tech’s humanities core requirement for HUM 2051 and HUM 2052. Transfer students should see the humanities and communication department for applicable course substitutions for HUM 2052 in the case of transferring for Florida Tech with less than an associate’s degree.

Transfer credit requires a grade of at least C or equivalent and a determination that the work is equivalent to that given at Florida Tech in course content and hours. A grade of C- or below is not eligible for transfer credit.

A course that includes a significant writing or speaking component must be taught entirely in English to be eligible for transfer. Credits can be transferred without being applicable toward the student’s desired degree. Grades and grade points are not transferable. Florida Tech’s forgiveness policy is not applicable toward transfer credits.

Credit will not be given for courses listed on a transcript when credit was received by examinations such as equivalency, advanced standing or other examinations; courses without a grade or carrying grades but not credit hours; vocational/technical courses; or for internships, practicums or experiential learning. In most cases, credit will not be given for courses completed more than 10 years before Florida Tech enrollment. Transfer credit for grades of P or S is subject to approval.

Melbourne Campus
All requests for transfer credit, including credit earned by taking AP examinations, subject area CLEP examinations, etc., must be submitted to the registrar. All official transcripts and documents must be submitted before the completion of the first semester of enrollment. Requests for additional transfer credit must be made before the end of the second semester. Requests for advanced standing must be submitted to the appropriate academic unit head no later than 45 days after initial registration.

If the course equivalency is questionable, credit may be granted by equivalency examination.
The official certification of transfer credit is performed by the registrar's office based on evaluations performed by the academic units responsible for the subject matter areas represented by the transfer courses, except for courses for which there is no corresponding Florida Tech program. In the latter case, the registrar is the sole approving authority. Official transfer credit is reported on the transcript in terms of equivalent Florida Tech course identifications, if any, and otherwise as electives, either with the subject area identified (e.g., physical science elective) or as undesignated transfer credits. The use of any transfer credit, other than credit for a specific Florida Tech course, in meeting degree requirements is subject to the approval of the faculty responsible for the degree program. Transfer students are encouraged to provide the registrar with college catalog(s) and/or course syllabi and names of textbooks used in courses to help assure a thorough transfer credit evaluation.

Certification of transfer credit is based on official transcripts bearing the correct seals and authorized signatures from all former institutions. A transcript is considered official only when each issuing institution mails the transcript directly to the Florida Tech undergraduate admission office or the registrar's office. The registrar's office coordinates the process, certifies courses without respect to the major and provides notice of the official evaluation. The student's academic unit completes the application of transfer credit to the degree program. While Florida Tech makes every effort to complete the official certification of transfer credit before the student's arrival at Florida Tech, university policy allows one semester in which to complete this process. The academic college reserves the right to review transfer credit evaluations for errors and make corrections within 60 days from the date of transfer credit evaluation notice.

Florida Tech University Online

The transfer credit policies outlined above apply equally to online students with the following exceptions and clarifications:

University policy allows two consecutive 8-week terms in which to complete the transfer credit process. The academic college reserves the right to review transfer credit evaluations for errors and make corrections within 60 days from the date of transfer credit evaluation notice.

The official certification of transfer credit for Florida Tech University Online students is performed by the Office of Online Learning, based on evaluations performed by the academic units responsible for the subject matter areas represented by the transfer courses, except for courses for which there is no corresponding Florida Tech program. In the latter case, the registrar is the sole approving authority.

A transcript is considered official only when mailed directly to Florida Tech University Online at Florida Tech from the issuing institution. The online learning office coordinates the process once all completed documentation is received, certifies courses without respect to the major and provides notice of the official evaluation.

Courses taken at another university that are equivalent in content and credit hours to the following Florida Tech courses will only be considered for transfer credit if the course is no more than five years old.

CIS 1130  PC Applications
CIS 1140  Business Computer Skills
EHC 1103  Medical Ethics

EHC 3302  Healthcare Organizations
EHC 3303  Managed Care
EHC 4402  Community Health Evaluation
EHC 4410  Quality Improvement Methods in Healthcare
EHC 4498  Health Planning and Policy Management
ELA 3001  Legal Aspects in Healthcare Management

The statute of limitations applies to all CIS courses taken more than 10 years before enrollment at Florida Tech. Once the transfer credit evaluation is complete, students who wish to appeal may do so by contacting their Florida Tech academic department's program coordinator. Appeals will be considered on a case-by-case basis.

Courses taken at another university that are equivalent in content and credit hours to College Algebra (MTH 1701) will be considered for transfer only if the course was taken within 10 years of enrollment at Florida Tech. Exceptions to this policy will be considered when the student scores 25 or higher on the Mathematics Diagnostic Examination taken during Mastering eLearning (ASC 1006) followed by the student submitting an exception to policy request via e-mail to tceu@fit.edu.

International University Transfer Credit

Undergraduate transfer credit may be awarded for courses taken at an international college or university that is recognized as being degree-granting by that country's educational governing authority. The student may be required to contact the country's educational governing authority to request that official documentation be mailed from the educational governing authority directly to the Florida Tech registrar's office.

A student requesting transfer credit for academic work completed at an international educational institution must request that official transcripts be mailed directly to the appropriate admission office from all previous institutions, showing all courses taken, dates and grades. A transcript is considered official only when each issuing institution mails the transcript directly to Florida Tech's undergraduate admission or registrar's office. Official course descriptions and/or syllabi are also required. In the case of transcripts and course syllabi that are not in English, official English translations are required. Florida Tech reserves the right to request the student to request an independent evaluation and/or recommendation regarding the international institution, performed by an agency specified by Florida Tech.

While Florida Tech makes every effort to complete the official certification of transfer credit before the student's arrival at the university, policy allows one semester (two 8-week terms for Florida Tech University Online) in which to complete this process. Transfer credit criteria mentioned in the section above apply to transfer credit from international institutions.

Articulation Agreements

Articulation agreements exist with a number of schools in the United States and abroad. The majority of these agreements is with two-year colleges and is designed to provide ease of transfer for students who have completed the Associate of Arts degree. Florida Tech has an articulation agreement with all of Florida's community and junior colleges.

For more information on the articulation agreement, contact the articulation officer in the undergraduate admission office.
Four-Year Guarantee
A four-year guarantee is offered to the incoming Melbourne campus freshman class. Florida Tech guarantees that a student who meets the following requirements will earn a bachelor’s degree in four years:

- Declare a major as an incoming freshman and continue in that major until graduation*
- Consult the designated academic adviser before registering each semester
- Follow the curriculum plan presented in the University Catalog by taking and passing each course in the semester indicated
- Maintain a GPA of 2.0 or higher

*Students needing prerequisite coursework and those initially enrolled in nondegree-granting programs (General Engineering, General Science or General Studies) do not qualify for this guarantee.

Distinguished Student Scholars
Following each fall semester (or Fall 2 for Florida Tech University Online students), all undergraduate students who have a cumulative GPA of 3.8 or higher and have completed more than 52 credit hours at Florida Tech are recipients of Distinguished Student Scholar recognition.

Dean’s List
Undergraduate students who complete 12 or more graded undergraduate credit hours in the semester with a semester GPA of at least 3.4 are considered to be “Dean’s List” students for that semester. Dean’s list designation will be listed on the student’s transcript. A congratulatory letter from the student’s dean confirming this designation will be provided on request to the dean’s office on the Melbourne campus.

Accelerated Master’s Programs
Undergraduate students who meet certain requirements may be eligible to participate in accelerated master’s programs that entail completing both bachelor’s and master’s degrees in five years by maintaining higher overall and program undergraduate GPAs and who are willing and able to carry increased course loads. High-achieving students are strongly recommended to discuss this option with their advisers. Accelerated programs are not available in all majors or colleges.

Graduation Honors
At graduation, bachelor’s degree recipients achieving high academic performance are recognized according to their cumulative grade point averages. In the case of multiple bachelor’s degree recipients (multiple diplomas), the honors must be earned separately for each degree received, and are determined by the program GPA based on courses that apply to the specific degree. In computing the cumulative GPA for graduation honors, neither transfer credits nor forgiveness policy apply. Academic honors are listed on the student’s diploma and transcript. The honors are determined as follows:

- Summa Cum Laude ................................................... 3.90 to 4.00
- Magna Cum Laude ................................................... 3.70 to 3.89
- Cum Laude .............................................................. 3.40 to 3.69

Studies-Related Assistance

Melbourne Campus
The objective of the Student Success Program is to do everything possible to assure that our students are successful in their studies at Florida Tech. A major activity of this program is called Freshman Retention by Evaluation and Systematic Help (FRESH). FRESH assures that new freshmen are placed at the proper level in first-year courses, especially in mathematics and chemistry.

Research conducted by Florida Tech and other universities categorizes most student problems as academic or social. With its primary focus on academic concerns, the program designs activities to promote the students’ academic development. Additionally, it helps enhance student appreciation of the ideas and principles that will sustain lifelong growth in judgment, integrity, emotional maturity and an understanding of people. Current areas of activity in addition to FRESH include:

- Counseling students when they need help with their studies or with campus life as it relates to their studies.
- Assuring that students are informed about the services available to them.
- Sponsoring noncredit seminars, courses for credit and other activities that add depth to students’ academic experiences and help them to succeed in their studies and in their careers.
- Referring students to other resources that can provide needed help.
- Acting as a liaison between students and academic units.
- Scheduling and publicizing timely academic advising activities. For example, freshman academic advisers meet with new freshmen during the sixth week of the new student’s first semester to review academic progress and discuss the curriculum.
- Sampling student opinion of both academic and support services offered by the university. Results are transmitted to students, the university faculty and administration.

Although most of the effort is directed toward the needs of freshmen, a growing portion is aimed at the needs of all students.

Academic Support Center
The Academic Support Center (ASC) is a multipurpose learning facility located in the Evans Library Pavilion. The ASC administers the Student Success Program and offers students free one-on-one tutoring in composition, mathematics, computer science, physics, accounting, chemistry, aeronautics and engineering courses. In addition, the ASC offers small group study sessions led by undergraduate honor student tutors.

The ASC also serves as a reserve center for various audiovisual materials that faculty can use to supplement coursework. The center contains programs on developmental reading, research paper writing, foreign languages and other topics of value to students.
Early Warning System
The Early Warning System, a service of the ASC and registrar’s office, requires advisers to contact their first-year students during the ninth week of the term if they are deficient in one or more courses.

Florida Tech University Online
Online tutoring is available to students via a service called Smarthinking. Students can access this service by clicking on the Resources tab within their course site. For 1000- and 2000-level courses, there will be a direct link to Smarthinking at the course site. For all other courses, it will be mentioned in the syllabus. Students can get live, online tutoring, as well as reviews and comments about essays and reports. Information about this service is available at www.smarthinking.com.

The learning management systems (LMS) automatically notifies students enrolled in Florida Tech University Online when, after four weeks into the term, they have not shown satisfactory progress.

Graduation Requirements
To receive an associate’s or bachelor’s degree, a cumulative Florida Tech grade point average of 2.0 or higher is required. In the case of a student seeking two or more associate’s or bachelor’s degrees (see “Dual Majors and Additional Degrees”), a program GPA of at least 2.0 is required in each program for which a degree is awarded, as well as the overall GPA of at least 2.0 that is required for the award of any associate’s or bachelor’s degree (see “Grade Point Average” for the definitions of program and overall GPA).

A student is not permitted to graduate unless all financial obligations have been satisfied. All program requirements must be completed no later than 24 hours before commencement exercises. Program requirements completed after the deadline will cause a delay in the awarding of the degree. When program requirements have been met, the student may request a letter verifying all degree requirements have been met and that the degree will be awarded.

Students should petition to graduate and attend the commencement ceremony for the term program requirements are met. Melbourne campus and Extended Studies Division students attend the spring ceremony if requirements are met in spring and the fall ceremony if requirements are met in summer or fall. Florida Tech University Online students participate in the Melbourne commencement ceremony in spring if they satisfy requirements during Spring–1 or Spring–2 and the fall commencement ceremony if they satisfy requirements during Summer–1, Summer–2, Fall–1 or Fall–2.

Undergraduate Core Requirements
A common purpose of all undergraduate programs at Florida Tech is to impart an understanding of our current technology-centered civilization and its historical background. All students seeking a bachelor’s degree are therefore required to complete the following core requirements:

Communication (9 credit hours)
Including COM 1101, COM 1102.

Humanities (9 credit hours)
Including HUM 2051, HUM 2052.*

Mathematics (6 credit hours)

Physical and/or Life Sciences (6 credit hours)

Social Sciences (3 credit hours)

*Any student who transfers to Florida Tech with an Associate of Arts degree from a regionally accredited institution in the U.S. automatically meets Florida Tech’s humanities core requirement for HUM 2051 and HUM 2052.

In addition to these 33 credit hours, there is a computer literacy requirement that can be met by earning credit for one of the courses designated as CL in the Course Descriptions section. There is also a requirement to complete the one-credit hour course, University Experience (ASC 1000) during the freshman year for new Melbourne campus students enrolling full time in college for the first time, or Mastering eLearning (ASC 1006) during the first term for Florida Tech University Online students. Melbourne campus transfer students are not required to take ASC 1000 and should consult with their academic program chairs or advisers for available substitutions.

Courses listed under more than one prefix (i.e., Primer for Biomath, BIO 2332 and MTH 2332) may not be repeated for credit under the alternate prefix.

Core requirements for the associate’s degree in the College of Aeronautics are the same as for the bachelor’s degree, except that in the areas of communication and humanities only the four listed courses (12 credit hours) are included.

Core requirements for the associate’s degree in Florida Tech University Online are as described in this catalog for each degree program and include the minimum undergraduate core requirements as described above.

Residency Requirements for Graduation
To qualify for an associate’s or bachelor’s degree from the university, no less than 25 percent of work must be completed while enrolled and attending Florida Tech, and must include the final 12 credit hours before graduation. A request for waiver of the requirement for the final 12 credit hours to be taken at Florida Tech must be submitted in advance for consideration. Active duty military and activated reservist students and their dependants are excluded from the final 12-credit-hour requirement. The 25 percent requirement cannot be waived.

The university reserves the right to change requirements for graduation when it is decided that such changes are necessary. Students are generally graduated according to the degree requirements of their peer group in effect at the time of their admission, unless attendance has not been continuous.

Quality Enhancement Plan Requirements
SACS (see “Accreditation and Memberships” in the Institution Overview section) requires each university to develop and implement a unique quality enhancement plan (QEP) to enhance student learning in all undergraduate programs in a manner consistent with the university’s mission, heritage and recognized strengths.

Florida Tech’s ongoing emphasis on the relationships among research, teaching and learning led to the selection of scholarly inquiry as the theme for the QEP. Its goals focus on student application of academic knowledge, and student problem-solving and
communication skills. Florida Tech’s QEP is designed to accommodate the various forms of scholarly inquiry including student design projects, student research and investigations undertaken as part of preprofessional internships.

All QEP projects are undertaken during the junior and/or senior year (may be the third or fourth year for Florida Tech University Online students). Courses within the QEP are designated ‘Q’ in the Degree Programs and Course Descriptions sections. Consistent with this, all undergraduate students are required to plan, undertake and report on a scholarly project in an area of their own choosing that is approved by the instructor of the Q-designated courses in their program of study.

Cooperative Education Credits
Students participating in the university’s cooperative education program (CWE 1001, CWE 2001, CWE 3001 and CWE 4001) receive free elective credits and are considered full-time students when working full time. Engineering students are encouraged to participate in the engineering co-op program (EPE 1000, EPE 1100, EPE 2100 and EPE 3100).

The applicability of these credits toward degree requirements is limited and dependent on the degree being sought and the nature of the work experience.

Electives
The following definitions of electives pertain to all degree programs at Florida Tech. The student should consult these definitions when selecting appropriate courses to satisfy the electives listed under program requirements. The counsel and consent of the student’s academic program chair or adviser is important in the final selection.

Engineering Design Elective
Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process, often iterative, in which the basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. Central to the process are the essential and complementary roles of synthesis and analysis. Each engineering design course includes some of the following features: development of student creativity, use of open-ended problems, formulation of design-problem statements and specifications, consideration of alternative solutions, feasibility considerations, detailed system descriptions and a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact. A list of approved engineering design electives is normally available in each engineering department office.

Engineering Science Elective
Engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward a creative application. These studies provide bridges between mathematics, basic science and engineering practice. Lists of approved engineering science electives are included with the program listings.

Flight Training
Flight training is available to any Melbourne campus student and may be used as elective credit in many degree programs with program chair or adviser approval. FAA Private Pilot Certificate training requires only two courses totaling five semester hours of credit.

Foreign Languages
Students who have had less than two years of foreign-language study at the secondary level may enroll in elementary language courses at Florida Tech. Students who have had two or more years of foreign-language study at the secondary level and students who transfer one year of foreign-language study to Florida Tech from another college or university must enroll in intermediate courses. Native or multilingual speakers of foreign languages may not enroll in elementary or intermediate courses; they may, however, enroll in advanced-level courses. The head of the department of humanities and communication will make final decisions regarding the placement of students in foreign-language courses.

Free Elective
Free electives may be any courses 1000-level or above taken at Florida Tech, or courses taken elsewhere if transfer credit is awarded by Florida Tech. Courses can be combined to satisfy the specified free-elective credits (e.g., three one-credit courses can satisfy a three-credit listing in a degree program) or vice versa (a three-credit course for three one-credit listings). No more than a total of four credit hours of free elective credits earned for physical education activities and/or health education can be applied toward meeting degree requirements.

Humanities Elective
Courses concerned with human culture including literature, history, philosophy, religion, linguistics, professional ethics and foreign languages other than a student’s home language meet the requirements for humanities electives. Courses in art, music and drama, other than performance courses, also meet these requirements. These courses are designated as humanities (HU) or humanities/social science (HU/SS) electives in the Course Descriptions section.

A foreign language is considered to be the student’s home language if it is the formal or commonly used language of the student’s country or community, or if it was the language used as the medium of interaction in all or part of the student’s pre-university education. Humanities elective credits may not be granted by equivalency examinations.

Liberal Arts Elective
A liberal arts elective is any course offered by the department of humanities and communication (HUM, COM, LNG) or any psychology course (PSY). Certain BUS and EDS courses may also be considered liberal arts electives as determined by the student’s academic unit.

Restricted Elective
A restricted elective is an elective selected from a specified academic discipline. The academic discipline is included in the specification of the elective, e.g., Restricted Elective (Chemistry) or Restricted Elective (CHM). The level of the elective may also be specified by the academic unit.
Social Science Elective
Studies of society and of the relationship of the individual to society including anthropology, psychology, sociology, economics, political science, history, linguistics, social responsibility and foreign languages other than a student's home language meet the requirements for social science electives. These courses are designated as SS or HU/SS electives in the Course Descriptions section.

Social science elective credits may not be granted by equivalency examinations.

Technical Elective
A technical elective is a course in any field of science or engineering, subject to department or program approval. Courses classified as mathematics, basic science, applied science, engineering science, engineering design or some combination of these satisfies the requirement. These courses should be at a level appropriate to the level at which they appear in the program.

Academic Regulations
The following represents an abbreviated presentation of some of the more commonly encountered regulations affecting undergraduate students at Florida Tech (see also other definitions in this section). Most can be found on the Florida Tech website. For other academic policies and regulations, the vice president for academic affairs should be consulted. Academic policies are subject to change.

Attendance
Melbourne Campus
Students registered for any course are expected to attend all lectures and must attend all laboratories, examinations, quizzes and practical exercises, subject to penalties specified by the instructor for that course.

Students who miss class must obtain permission from the course instructor to make up missed work. This permission must be requested at the earliest possible opportunity, and before the absence if possible. The student must arrange with the instructor to make up the missed work. The makeup must be completed within two weeks after the absence. In the case of missed final examinations, the policy on Incompletes (I) applies. In mitigating circumstances, the instructor, with the concurrence of the academic unit head offering the course, may require an alternative to making up the missed work.

If circumstances require a student to report late for a class or to leave before the class is over, prior notification should be given to the instructor if possible. Repeated occurrences may result in the student being temporarily denied admission to the classroom.

The professor of military science of the Army ROTC unit has sole authority to determine attendance regulations in ROTC classes.

Florida Tech University Online
The learning management system (LMS) tracks student attendance electronically. In order to participate in class or access class materials students are required to log into the system with a unique username and password.

Attendance for Florida Tech University online classes is required. Non-attendance may also be recorded by the student's failure to log in to registered classes, failure to take part in discussion boards or forums, failure to respond to an instructor's e-mail or any combination of these.

Classification of Students
All new students are classified as freshmen unless they have completed sufficient transferable credit hours at another college or university to qualify for advanced standing at Florida Tech. The university operates on the semester system, and course credits are computed on that basis. For those students who have completed college work elsewhere, classification is based on credit hours accepted at Florida Tech rather than the amount of work presented.

Melbourne campus undergraduate students are classified by student level as follows:

- Freshman ............................................................. 0–29 credit hours
- Sophomore ......................................................... 30–55 credit hours
- Junior ............................................................... 56–84 credit hours
- Senior ............................................................... 85 credit hours and above

Students whose studies at Florida Tech began under the quarter system are classified on the basis of all credits earned under both systems, with quarter hours being translated to semester hours according to the ratio of three quarter hours to two semester hours.

Florida Tech University Online Students
Florida Tech defines the academic year for Florida Tech University Online undergraduate programs as 24 credit hours over 32 weeks of instruction. Students are classified by year as:

- First year .......................................................... 0–24 credit hours
- Second year .................................................... 25–48 credit hours
- Third year ......................................................... 49–72 credit hours
- Fourth year ...................................................... 73–96 credit hours
- Fifth year .......................................................... 97 credit hours and above

All new students are classified as first year unless they have completed sufficient transferable credit hours at another college or university to qualify for advanced standing at Florida Tech. The university operates on the semester system, and course credits are computed on that basis. For those students who have completed work elsewhere, classification is based on credit hours accepted at Florida Tech rather than the amount of work presented.

Dual Majors and Additional Degrees
The dual major is recognized any time a student completes all degree requirements for two bachelor's degree programs. On completion of the requirements for both programs, the student receives one diploma noting both majors (e.g., "Bachelor of Science in Mathematics and Interdisciplinary Science" or "Bachelor of Science in Biological Sciences/Ecology and Marine Biology Options").

A student may become a candidate for a second bachelor's degree (two diplomas) when he or she has completed at least 15 credit hours of additional Florida Tech work beyond the requirements of a single degree in the major requiring the higher number of credits and all requirements listed for both degree programs.

Florida Tech University Online students may pursue a concurrent dual degree only from within the Florida Tech University Online programs currently offered. Florida Tech University Online students may not seek a second degree from an academic unit outside Florida Tech University Online while currently fulfilling requirements for the first degree. A student may only enroll consecutively for a second degree from another academic unit at Florida Tech.
Minors
Florida Tech offers minor programs in several areas of study. Colleges/departments may designate minors that require 18–21 credit hours of selected coursework, excluding the core courses COM 1101, COM 1102, HUM 2051 and HUM 2052. The intent of the minor is to encourage and recognize focused study in a field outside the student’s major. Therefore, no more than nine credit hours applied to the minor may be named courses in the major. At least nine credit hours of the minor must be taken at the Melbourne campus (see below for the online minor offered to Florida Tech University Online students). A minor program GPA of at least 2.0 is required in order to receive recognition for the minor on the student’s diploma, and the minor is only awarded at the same time as the major. Additional restrictions may be placed by the college/department offering the minor.

Minors may be chosen from within or outside the student’s major college. Minors will be indicated on the student’s transcript and resulting diploma. Requests to pursue a minor will require approval of the minor program plan by both the major and minor program chairs. The request for a minor must be made before filing the petition to graduate and must be indicated on the petition.

Information about each minor program offered at Florida Tech may be found within the college/department section offering the minor.

Florida Tech University Online offers a minor in human resources management for its online students. All other minors are offered only in the classroom on the Melbourne campus.

Forgiveness Policy
The forgiveness policy is a system by which an undergraduate student may repeat an undergraduate course with only the last grade received for this course (this grade may be an F) used in the cumulative grade point average, and in evaluating the fulfillment of graduation requirements. All grades received in any course, including those retaken under the forgiveness policy, are retained and recorded on the transcript. Credits where the forgiveness policy has been applied to a course will be removed from both the term and overall GPA.

An undergraduate student is allowed to apply forgiveness to undergraduate courses a maximum of five times during his or her Florida Tech career. No forgiveness is allowed for subsequent retakes above the maximum of five; all subsequent grades are averaged into the cumulative GPA. A student attaining 90 or more credit hours may not apply the forgiveness policy to 1000- and 2000-level courses. The forgiveness policy does not apply to graduate courses, even if taken by an undergraduate student, or to undergraduate courses taken by a graduate student.

A Request to Retake a Course form must be completed for every course retaken under the forgiveness policy. To be applied, this form is due in the registrar's office no later than Friday of the fifth week of classes for fall or spring semester, Friday of the third week before the end of regular classes for a summer term, and no later than Friday of the fifth week of classes for Florida Tech University Online students. This form is a binding agreement between the student and Florida Tech. Once applied to a repeated course, forgiveness cannot be reversed.

Not Permitted to Register
When it is determined by the academic dean of the college in which a student is enrolled that a student is deliberately trying to circumvent university academic policy, regardless of scholarship, the dean may determine that such a student is not permitted to register.

Study at Other Institutions
A currently enrolled student may take a limited number of courses at other regionally accredited institutions for transfer to a Florida Tech undergraduate degree program. Prior approval is mandatory. The student must complete and submit all applicable forms with all required signatures and a written justification. A copy of the other institution’s published course description(s) may be required.

Florida Tech’s forgiveness policy is not applicable under the Undergraduate Request to Study at Another Institution policy. Financial aid recipients may wish to consult their financial aid counselor before requesting to study at another institution.

All requirements affecting transfer of credits taken elsewhere for application toward a Florida Tech bachelor’s degree apply, as listed in this section. After becoming a Florida Tech student, no more than three courses may be taken elsewhere and applied toward a Florida Tech degree.

A course that includes a significant writing or speaking component must be taught entirely in English to be eligible for transfer.

No credit will be awarded for a course taken elsewhere if the student was ineligible to take the equivalent course at Florida Tech for any reason.

The student must request an official transcript mailed by the other institution directly to the Florida Tech registrar’s office.

This catalog does not list the complete policy for studying at another institution. The complete policy on study at other institutions can be obtained from the appropriate office or online from the university website.

Florida Tech University Online students should e-mail tceu@fit.edu for mandatory prior approval by the credential evaluator in the online learning office before beginning study at another institution.

Change of Major
During their studies, students receive exposure to a number of different academic subjects, and some are attracted to programs different from their initial choices. A change of major is possible if the student submits a Change of Major/Minor, Change of Site or Dual Degree form that is approved by the new academic unit head. After a change of major, courses unrelated to the new program will not be used in computing the student’s cumulative GPA. However, all earned grades and credits remain on the transcript.

Following a change of major, the degree requirements in the new major may be based on either the student’s original catalog, or the catalog in effect at the time of the change of major, or on a catalog between those two, subject to the approval of the academic unit head, as indicated on the submitted change of major form.

The policy above applies equally to Florida Tech University Online students who complete their Change of Major request online from the Florida Tech website.
**Undeclared Major on Melbourne Campus**

A new student may be uncertain about the specific academic program he or she wishes to pursue. The undeclared major gives a new student the opportunity to explore the general area of interest more broadly for a limited time before choosing a specific major.

Three freshman-year undeclared major programs are available on the Melbourne campus: General Engineering (College of Engineering), General Science (College of Science) and General Studies (College of Psychology and Liberal Arts). The general studies program is for those who may wish to pursue a major in business administration, communication, humanities or psychology. More information on these programs may be found under each college in the Degree Programs section.

**Probation and Dismissal**

**Academic Probation**

Academic probation status will be applied to an undergraduate student with a cumulative GPA less than 2.0 at the end of any term. A student on academic probation is not permitted to register for more than 15 credit hours without the approval of the student’s dean.

The student’s academic performance is reviewed at the end of the probationary term. The probationary status is continued if the cumulative GPA is less than 2.0 and falls within the minimum standards below:

- 0 to 59 credit hours ................................................................. at least 1.50
- 60 to 89 credit hours ................................................................. at least 1.70
- 90 or more credit hours .............................................................. at least 1.90

*Note: Credit hours above include transfer credits, credits by examination and all Florida Tech credits earned*

The academic probation status is removed after the review if both term and cumulative GPA are 2.0 or higher.

**Academic Dismissal**

A student whose cumulative GPA does not reach the level defined above is academically dismissed at the end of the probationary term, with the exception of a student who has been reinstated and is meeting all reinstatement conditions.

**Melbourne Campus**

A summer grace period is available to a student who would normally be academically dismissed at the end of a spring term probationary period but who has registered for the summer term by the last day of spring term’s final examination week. Such a student will not be academically dismissed but will be re-evaluated at the end of the summer term. A student who fails to meet previous reinstatement conditions does not qualify for the summer grace period and will be academically dismissed at the end of spring term. The grace period is not available to students enrolled in 8-week online terms.

**Academic Dismissal Notification / Right Of Appeal**

The registrar will send notification of academic dismissal from the university to the student.

An academically dismissed student may be reinstated for educationally sound reasons by special action of the Academic Standing Committee of the college or school in which the student is enrolled. A letter requesting reinstatement should be submitted to the committee through the registrar. A student who has been away from the university for four or more consecutive semesters (12 or more 8-week terms) and was dismissed after the last term of enrollment must submit a letter of appeal for reinstatement. The letter is sent to the undergraduate admission office along with the application for readmission.

Students reinstated by the Academic Standing Committee may be subject to special requirements as determined by the committee. Failure to meet the conditions specified at the time of reinstatement will result in a second dismissal, with the student retaining the right to request another reinstatement, although such requests are normally granted only in extraordinary cases.

**Disciplinary Dismissal**

The university reserves the right to dismiss any student at any time if there is just cause and such action is consistent with the policies outlined online in the Student Handbook.

Any student dismissed for disciplinary reasons will not be entitled to receive any refunds, will forfeit all fees and deposits, and will receive failing grades for all courses scheduled during the semester unless recommended otherwise by the University Disciplinary Committee or designated hearing officer and approved by the dean of students.

Students are expected to be familiar with the “Code of Conduct and University Discipline System” detailed in policies online in the Student Handbook.

**GRADUATE STUDENT INFORMATION**

**Academic Policies**

Academic policies for graduate students are published on the Florida Tech website (www.fit.edu), under graduate programs. All graduate students are advised to review graduate policy early in their graduate careers and to refer to the website or the Office of Graduate Programs on the Melbourne campus if in doubt about any aspect of graduate policy.

**Admission Policies for All Students**

Admission to graduate study is granted to qualified applicants. Successful applicants for the master's degree will have received a bachelor's degree from a regionally accredited institution, or its equivalent internationally, in a program that provides suitable preparation in the applicant’s chosen field. Admission to doctoral study is granted to a limited number of applicants. Successful applicants for the master's degree will have received a bachelor's degree and master's degree, but admission with only a bachelor's degree is possible for superior students. The academic record of the applicant must indicate probable success in the desired program. As a general rule, an undergraduate cumulative GPA of at least 3.0 is required, and for doctoral programs a cumulative graduate GPA of at least 3.2 is required for admission. Individual academic units may have higher minimum standards. Only in unusual cases, in which clear and substantive evidence justifies such action, will students be admitted who do not meet this standard.

For those cases in which the student has acceptable undergraduate achievement but has course deficiencies, the major academic unit will specify the criteria that must be met to remove the deficiencies.
**Extended Studies Division Application**

Applications for admission to the Extended Studies Division can be submitted via PAWS at www.fit.edu. The application must be accompanied by payment of the nonrefundable application fee.

One officially certified copy of all undergraduate and graduate (if applicable) transcripts must be sent directly from the student’s institution to Graduate Admissions, Online Learning and Off-campus Programs, 150 W. University Blvd., Melbourne, Florida 32901. All additional certified copy of all transcripts may be requested for site use.

Transcripts from foreign universities must be accompanied by a certified English translation.

**Florida Tech University Online Application**

Applicants for master’s degree programs may request their applications for the upcoming term from www.floridatechonline.com. Students must complete the application and provide all required documents to be considered for full admission or to request financial aid. Only fully admitted students are eligible for federal financial aid. Applicants may enroll in up to two consecutive 8-week terms before being fully admitted. The steps below are required.

**Application and Fee:** Complete the online application at www.floridatechonline.com. A nonrefundable application fee must accompany the application. The amount required varies based on the degree program.

**Transcripts:** Provide official transcripts from all colleges or universities attended. Transcripts will be requested on the student’s behalf as part of application process.

**Recommendations:** For the MBA degree, potential applicants are requested to submit recommendations from individuals who can attest to previous academic and professional performance and potential for success in graduate study. See the instructions on the online application for submission of recommendation letters.

**Résumé:** A résumé is requested of all applicants for graduate admission and should detail all past professional and educational experiences including such information as publications and memberships in professional organizations. Nontraditional educational experiences, teaching and relevant employment should be included.

**Statement of Intention:** A brief Microsoft® Word® document (no longer than one page) explaining the applicant’s reasons for pursuing an MBA, what gains are expected from the program, factors that may positively impact study in the program and any special circumstances that should be considered during the application review. The document should answer the following:

- Why enrollment in an MBA program?
- Why enrollment in Florida Tech?
- How do applicant’s academic and professional history relate to the intended program of study?

**Transient Students**

A transient student is defined as any student in another accredited university pursuing a master’s degree. A transient student may seek admission to a degree program through the normal admission process. If a transient student subsequently decides to pursue either an undergraduate or graduate degree at Florida Tech and is accepted into the degree program, a maximum of 12 semester credit hours earned as a transient student may be applied toward the degree, provided the coursework is academically appropriate. Transient students are required to:

- Complete the online application form.
- Provide a copy of transcripts from the university that granted the bachelor’s degree.
- Provide a copy of transcripts from current graduate program.
- Pay the nonrefundable application fee.
- Provide proof of English language proficiency if English is not the student’s home language.
- Provide a copy of passport or naturalization papers if the student is not a U.S. citizen.

All transient students must have met all prerequisite requirements and may be registered for no more than two consecutive 8-week terms. Once the Florida Tech courses have been completed, the student may request a transcript to be sent to his/her home academic institution from Florida Tech after grades are posted. This is not an automatic process. Students must request the transcript to be sent.

Transient students are required to be in good standing at their home academic institution. No more than 12 semester credit hours of graduate-level courses taken as a transient student may be transferred to an academic degree program at Florida Tech.

**Melbourne Campus Application**

Applications are available online at www.fit.edu/grad or by writing to Florida Tech Office of Graduate Admissions, 150 W. University Blvd., Melbourne, Florida 32901.

Applications should be submitted according to the following guidelines:

<table>
<thead>
<tr>
<th></th>
<th>FALL SEMESTER</th>
<th>SPRING SEMESTER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Priority admissions for all program scholarships, fellowships and assistantships for master’s and doctoral applicants</td>
<td>January 15</td>
<td>July 1</td>
</tr>
<tr>
<td>Clinical Psychology applicants</td>
<td>January 15</td>
<td>*</td>
</tr>
<tr>
<td>Industrial/Organizational Psychology applicants</td>
<td>February 1</td>
<td>*</td>

<td>4 weeks before term</td>
</tr>
</tbody>
</table>

*Program admits once a year for the fall semester.

Applications received after the program-designated deadline will be considered, but late applicants may be at a disadvantage in terms of being admitted and/or receiving scholarships, fellowships and assistantships. It is the student’s responsibility to ensure that the graduate admissions office receives all materials required for evaluation of the application before the deadline. Late applications may not be evaluated for the entrance term requested.

**Application Fee:** A nonrefundable application fee must accompany any application. The amount required is shown on the application.

**Transcripts:** An official certified transcript must be sent to the Office of Graduate Admissions by the registrar of each college or university attended.
The admission materials information at the top of each graduate degree program outlines the application materials described in the paragraphs below. Applicants should note especially the GRE/GMAT recommendations.

**Recommendations:** Individuals who can attest to previous academic and professional performance and to potential for success in graduate study should mail letters of recommendation directly to the graduate admissions office. At least one letter of recommendation, if required, should be from a full-time faculty member, especially if the applicant is applying to a doctoral program; if a master’s thesis was carried out, a letter from the thesis adviser is normally required.

**Résumé:** The résumé should detail all past professional and educational experiences, including such information as publications and memberships in professional organizations. Nontraditional educational experiences, teaching and relevant employment should also be discussed.

**Statement of Objectives:** This statement of approximately 300 words should include a discussion of intended graduate study, professional career goals, and past and proposed activities in the field of study.

**Graduate Record Examination (GRE):** Official scores not more than five years old may be required. The computer-based test (CBT) is now the standard form for the General Test and may be taken year-round at designated sites around the country. International students may still have an opportunity to take the paper-based test at selected sites. For a listing of the sites, check the GRE Information and Registration Bulletin available in the graduate admissions office and online. The official test results are mailed within four to six weeks of the examination date. The official test results for the CBT are available immediately after the test. The official results of the CBT are mailed within 10–15 days of the examination date.

**Graduate Management Admissions Test (GMAT):** Although not required, the GMAT is strongly recommended for most Nathan M. Bisk College of Business applicants; for details see the section on admission requirements for the MBA degree program under the Nathan M. Bisk College of Business in the Degree Programs section. Substitution of GRE scores for the GMAT is allowed.

**TOEFL Scores:** Any student whose home language is not English may be accepted for any degree program but will be subject to limitations on registration for academic courses until certain English language requirements are met. For details see “Languages and Linguistics” under the College of Psychology and Liberal Arts in the Degree Programs section.

**Assistantship Application:** Each assistantship applicant must submit a completed assistantship application, three letters of reference and a statement of objectives. The priority deadline for all assistantship applications is January 15. Applications received after the program-designated deadline will be considered, but late applicants may be at a disadvantage in terms of being admitted and/or receiving scholarships, fellowships and assistantships. It is the student’s responsibility to ensure that the graduate admissions office receives all materials required for evaluation of the application before the deadline. All English language proficiency requirements apply.

**Reapplication:** Admission to most graduate programs is valid for two years from the semester of acceptance, but for the Psy.D. program and all biological sciences graduate programs, admission is only valid for the semester of acceptance. Individuals wishing to begin or resume graduate work after a two-year lapse are required to reapply for admission. Individuals who leave Florida Tech and attend another university without first having received written permission must reapply for admission and submit grade transcripts regardless of the length of time since last attending Florida Tech (see “Readmission Policy” in this section).

**Other Forms:** The Attendance Confirmation form and the I-20 Request form should be submitted at the time of application. The Acceptance Confirmation Reply and Medical History forms should be completed and returned, and the tuition deposit submitted, after formal admission to the university has been confirmed.

**Check-In on Melbourne Campus**

New students may come to the graduate admissions office in the Keuper Administration Building during regular university business hours for check-in instructions. This office is open during all breaks, except holidays. Refer to the appropriate academic calendar for reporting dates.

Florida Tech policy states that international students are required to attend for one full semester when entering the United States on a Florida Tech-provided I-20 form. Florida Tech will not release an international student to another educational institution until the student completes one semester at Florida Tech.

**Registration Prior to Admission**

Under certain circumstances, applicants can avoid delaying their education by registering for courses, for one semester only (two 8-week terms for Florida Tech University Online students), while their applications are processed, provided they are citizens or permanent residents of the United States.

Students who register before admission are not eligible to receive federal student financial aid until they are admitted to the university. Such registration requires a preliminary review of written documentation from the degree-granting institution (not necessarily official) showing previous academic courses taken, grades received and degrees awarded. The academic unit head, or his or her designee, should carry out the review. Permission to register pending formal acceptance requires a decision that there is a high probability of eventual acceptance into the program applied for and that registration before acceptance is in the best interest of both the academic unit and the student.

In the event that applicants are denied admission while enrolled in graduate courses, they will be given the option of either withdrawing with full tuition refund or completing the courses underway. If the applicant completes one or more graduate courses before being denied admission or completes a course for any other reason, he or she will not be given the option of withdrawing or receiving a tuition refund after completing the course.
Master’s Degree Policies

Classification of Students

Assignment to one of the following classifications is made at the time of admission.

Regular Student: A student whose undergraduate GPA is 3.0 or greater out of a possible 4.0 and who meets all other criteria for admission to a particular program is classified as a regular student.

Provisional Student: A student who does not meet the above criteria can be classified as a provisional student.

Special Student: Special student classifications exist at both the undergraduate and graduate levels and are used for students who, for various reasons, are not enrolled in degree-seeking programs. Specific instances include:
- a student taking coursework for credit to apply at another institution;
- a student taking courses to fill specific professional or vocational needs; or
- a prospective graduate student with generally acceptable undergraduate achievements but with subject matter deficiencies (usually as a result of changing fields) that, in the judgment of the academic unit, preclude immediate acceptance into the degree program.

In the last-mentioned case, the student will normally have the option of pursuing an undergraduate degree in the desired discipline or making up the deficiencies while enrolled as a special student. The student will then be considered for admission to the appropriate graduate degree program once sufficient additional work has been done to form an adequate basis for a decision by the academic unit.

The customary classification of special students will be as undergraduate students, regardless of the existence of previous bachelor's degrees. A student may, however, be classified as a special graduate student. In such a case, designation and continuation of graduate student status will be at the discretion of the cognizant academic unit, or the director of graduate programs in the case of students who are not seeking eventual admission to a graduate degree program.

Course Requirements

Course requirements are stated in each master’s degree program description. Students who meet certain requirements may be eligible to participate in accelerated master’s programs that entail completing both bachelor’s and master’s degrees in five years by maintaining higher overall and program GPAs and who are willing and able to carry increased course loads. High-achieving students are strongly recommended to discuss this option with their advisors. Accelerated programs are not available in all majors or colleges.

The stated minimum credit hours can include any or all of the following, subject to academic unit approval and specific restrictions stated in graduate policy:
- Up to 12 semester hours of credit transferred from a regionally accredited institution or, in some cases, from a foreign university; or, in the case of a partner institution in a dual-degree program with Florida Tech, up to half of the total minimum credit hours.
- Up to six semester hours of credit for 3000- and 4000-level undergraduate courses taken while enrolled in a graduate program at Florida Tech. Only 4000-level courses will be considered if the courses are in the student’s major field of study.
- Credit previously used to meet the requirements of another master’s degree at Florida Tech may be used to meet up to half of the credits required for the later degree.
- Credit in excess of the seven-year statute of limitations if a waiver is in effect, in accordance with the statute of limitations as defined in this catalog.

Academic credit applied toward the requirements of a bachelor’s degree, at Florida Tech or elsewhere, may not be used in any graduate program at Florida Tech, regardless of the level of the course, unless the student has been accepted into an approved accelerated or fast track master’s program.

Program Plan

Each master’s-level graduate student is required to have an approved program plan on file no later than one month before nine credit hours of graduate courses have been completed.

Only one program plan can be in effect for a student at any given time. Because of the importance of the program plan in establishing a new program GPA following a change of major, no request to change majors will be processed unless accompanied by an approved new program plan. This requirement applies whether a degree was earned in the first major or not.

Graduate students receive a degree program plan/flow chart showing the most commonly accepted sequence of courses for their degree program as soon as admission is complete. Students should contact their academic program chair or adviser if they have not received a degree program plan/flow chart.

Thesis

Master’s theses are required in some programs and are optional in most others. The credit hours assigned to the thesis vary according to the program. A student cannot initially register for thesis unless his or her GPA is at least 3.0. Subsequent to the initial registration, the student must continue to register for at least three hours of thesis each academic term, including summer, until the thesis is defended and accepted by the graduate programs office. An interruption in thesis registration requires written approval in advance and is permissible only if the student is making no use of university facilities or personnel.

A grade of S (Satisfactory) or U (Unsatisfactory) is assigned at the end of each academic term, with zero credit hours earned. The candidate should contact the graduate programs office early in the thesis preparation process for guidance regarding style and format requirements. A Thesis Manual and Style Guide is available at the bookstore.

After all research has been completed, the written thesis is distributed to committee members at least two weeks before the thesis defense is held. If the thesis defense is successful, a P grade is assigned corresponding to the required number of thesis credit hours. A minimum of five copies of the approved thesis must be received and accepted by the graduate programs office before the degree can be awarded.
Design Project
All requirements listed for theses in the preceding section apply equally to design projects.

Final Program Examination
A final program examination is required in all master’s programs with the exception of all programs in the Nathan M. Bisk College of Business and the Human Factors in Aeronautics program in the College of Aeronautics, for which there is no on-campus counterpart. For nontesis students, the examination may be either written or oral, or both, at the discretion of the academic unit. For thesis and design project students, the examination consists primarily of an oral defense of the thesis or design project and takes place during the last term of registration for M.S. Thesis or design project.

An examination candidate must have a grade point average (both program and overall, if different) of 3.0 or higher at the time of the examination to be permitted to schedule any final program examination.

All oral examinations must be included in the weekly schedule of examinations published by the graduate programs office. Scheduling an oral examination is the responsibility of the candidate and his or her committee. Notification to the graduate programs office too late for inclusion in the weekly schedule will normally result in postponement of the examination. For written examinations, application must be made by the student to the academic unit at least one month in advance of the desired examination date. Examination dates will normally be announced each term by academic units requiring written examinations.

A candidate must be enrolled during the term the examination is taken. An exception is made for a nontesis student if a separate examination fee is paid.

Transfer Credit
If the courses constitute a logical part of the student’s master’s program, a maximum of 12 semester hours of transfer credit from regionally accredited institutions may be accepted, with the approval of the head of the appropriate academic unit and the director of graduate programs under the following conditions:

• The courses must have been taken for graduate credit and must not have been applied previously to any undergraduate degree.
• They must have been graded courses, and grades of at least B or equivalent must have been earned in each course.

Graduate Study at Other Institutions
A currently enrolled student may take a limited number of courses at other institutions for transfer to a Florida Tech graduate degree program. The restrictions on graduate transfer credit listed above apply. Prior approval is mandatory. The student must complete and submit the designated form with all required signatures and a written justification. A copy of the other institution’s published course description(s) must be attached. The student must arrange for an official transcript to be sent by the other institution directly to the Florida Tech registrar’s office.

Extended Studies Division Policies and Information
In general, all academic policies and requirements are applicable to Extended Studies Division students. The following exceptions and additional information are available online at http://es.fit.edu.

Some off-campus sites follow an academic calendar that is different from the Melbourne campus. It is advisable to contact the site for the most current information and calendar.

Purpose
Florida Tech’s extended studies and virtual campus programs are tailored to meet the educational needs of local residents, employees of industry and business, active duty military personnel and their families and U.S. government civilian employees in management and engineering. Enrollment in some programs in certain locations must be restricted to specified categories of individuals because of state requirements, laws pertaining to veterans benefits or local conditions.

Extended Studies Division Degree Programs
Courses are open to those seeking a graduate degree, as well as those wishing to take selected subjects for professional development. Degree requirements can be met by a combination of Florida Tech courses, transfer credits from other accredited institutions and transfer credits from certain military schools for those courses designated by Florida Tech. Information on the specific military courses accepted is available from the site director.

Degree Completion Programs
With approval of the Department of the Army, a cooperative degree program is conducted at Fort Lee, Virginia, in conjunction with the Army Logistics University (ALU) Theater Logistics Studies (TLog) presented by the U.S. Army Logistics Management College (ALMC). While attending that course, students also take certain Florida Tech classes. The credits for these classes plus the transfer credits awarded for satisfactory completion of the ALMC course itself are sufficient to allow the student to complete a degree program in two or three additional semesters, when authorized to attend Florida Tech classes on a full-time basis. The entire program can be completed at Fort Lee.

Doctoral Degree Requirements
Requirements for the Doctor of Philosophy (Ph.D.) degree include the general requirements listed here and specific program-by-program requirements and variations as presented in later sections. In addition to the Ph.D. degree, the university also offers the Doctor of Psychology (Psy.D.) degree, described under College of Psychology and Liberal Arts in the Degree Programs section.

The Ph.D. degree is awarded on the basis of clear evidence that the recipient possesses knowledge of a broad field of learning and mastery of a particular area of concentration within that field. The work leading to the degree consists of advanced studies and research that represents a significant contribution to knowledge in the subject area. Each student must complete an approved program of study, pass a comprehensive examination, complete an original research program, and prepare and defend a dissertation on that research.

Credit Hour Requirements
Although the Ph.D. is awarded primarily on the basis of original scholarly accomplishment rather than the accumulation of a specified number of credit hours, minimum standards are enforced regarding the number of credit hours that must be successfully
completed by all Ph.D. students subject to the limitations delineated in graduate policy.

Credit earned for courses taken in fulfillment of the requirements for a master's degree, either at Florida Tech or elsewhere, may be used in meeting some of the minimum requirement for coursework, subject to the restrictions stated above and provided that the courses are directly applicable to the field of the Ph.D. degree. A student should expect to take a significant amount of coursework at a more advanced level, even if graduate degrees in more than one field have been earned.

**Doctoral Committee**

At least 90 days before the comprehensive examination, the student must select a major adviser with the concurrence of the individual selected and the student's academic unit head. The major adviser serves as both research supervisor and chair of the doctoral committee and need not be the same person who served as academic adviser while the student was taking courses.

At least 60 days before the comprehensive examination, the major adviser nominates a doctoral committee for approval by the student's academic unit head and the graduate programs administrator. The committee consists of at least four Florida Tech graduate faculty members, including the major adviser. One member must be a full-time graduate faculty member from an academic unit that is administratively different from the student's and major adviser's. At least three members, including the major adviser, must be approved for doctoral advising.

This committee serves in an advisory capacity throughout the remainder of the doctoral program and is responsible for formally evaluating the candidate's progress by conducting the comprehensive examination, reviewing and approving the dissertation proposal, conducting the dissertation defense and approving the dissertation.

**Comprehensive Examination**

After the completion of all formal coursework (as determined by the academic unit) included in the doctoral program of study, the student is required to take a comprehensive examination administered by the doctoral committee established for the student. The examination covers the student's major area of emphasis in depth but may also include other areas considered appropriate by the doctoral committee. The examination may be written, oral or both, according to the requirements of each doctoral program. To pass, the student must have the unanimous approval of the committee. A student who does not pass the examination may, at the option of a majority of the committee, be allowed one opportunity to retake the examination after a suitable period of study. The examination must be passed at least one calendar year before the degree is awarded. Scheduling the examination to meet this requirement is the responsibility of the candidate and his or her committee. A candidate must be enrolled at the time the examination is taken. Otherwise, a separate examination fee must be paid.

**Dissertation Proposal**

Subsequent to successful completion of the comprehensive examination, a dissertation proposal must be submitted to the doctoral committee, who ascertains if the subject of the dissertation is of doctoral quality and that completion of the dissertation is feasible.

**Degree Candidacy**

An overall grade point average of 3.2 is required for admission to candidacy.

After a student has passed the comprehensive examination and has had the dissertation proposal approved by the doctoral committee, the student will be admitted to candidacy for the doctoral degree by submitting the required form for approval and forwarding it to the registrar.

**Residency Requirement**

The residency requirement consists of the performance of research under the direct supervision of Florida Tech faculty for at least one calendar year; and enrollment in a Florida Tech graduate program for a minimum of two years from the time of original registration.

A doctoral student who has been admitted to candidacy must normally register each academic term thereafter for six or more credit hours of dissertation throughout the remainder of his or her program. At the discretion of the academic unit, a doctoral student can register for three semester credit hours of dissertation where justified. In some cases, registration for fewer credit hours is permitted in the final semester of registration. See the online graduate policies for details. After admission to doctoral candidacy, an interruption in registration is permissible only if the student is not making any use of university facilities or personnel, and with written approval by the academic unit head and the director of graduate programs.

The student's dissertation performance is evaluated in each term of registration, and grades of S (Satisfactory) or U (Unsatisfactory) are assigned. These grades do not affect the student's grade point average. S grades corresponding to the required number of dissertation credit hours are replaced by grades of P (Pass) upon successful completion of the dissertation.

**Dissertation Preparation and Defense**

The dissertation must demonstrate critical judgment, intellectual synthesis, creativity and skills in written communication. The general format must follow the guidelines established by the academic unit and the office of graduate programs. Copies of the dissertation must be submitted to the doctoral committee at least one month before the proposed date of the dissertation defense. The office of graduate programs must receive written notification of the defense at least two weeks before its scheduled date. The candidate and his or her committee chair are responsible for scheduling the examination and notifying the graduate programs office.

The doctoral committee administers the dissertation defense. The candidate is questioned on the subject of the dissertation and any additional topics related to the candidate's ability to organize and conduct research. The dissertation must have the unanimous approval of the committee and must also be approved by the academic unit head. Requirements for the degree are not completed until the dissertation is accepted by the graduate programs office. A completed UMI Publishing Agreement form and Survey of Earned Doctorates form (both available from the graduate programs office) and an additional title page and abstract must accompany the required dissertation copies.
**Academic Unit Requirements**

The requirements specified above comprise the minimum requirements for doctoral degrees at Florida Tech. Academic units may specify additional requirements for their doctoral degrees as defined by Florida Tech graduate policy.

**Grading System and Requirements**

Graduate work is evaluated by letter grades, with only grades of A, B, C and P being credited toward graduate degrees. Grades of D and F are failing grades in graduate courses. Failed courses must be repeated at the earliest opportunity, if they are required courses. An elective course in which a D or F is received must be repeated, unless the academic unit approves an additional course to be taken in its place.

When P/F (Pass/Fail) grading is used, the total credit hours earned increases without having any effect on the GPA if a grade of P is earned, whereas no credit hours are earned and the GPA is adversely affected in the case of a grade of F, just as with any other F. P/F grading is used for certain courses and for master’s theses, design projects, doctoral dissertations and doctoral research projects.

The program GPA is based on the student’s program plan and includes all courses shown on the program plan as applying toward the degree, both graduate numbered and undergraduate numbered.

In cases where the degree-related GPA referred to above does not include all graduate courses taken at Florida Tech, an overall GPA is also calculated and reported. Graduate courses used to compute the overall GPA, but not the program GPA, include courses taken as deficiencies, courses unrelated to the student’s degree program, courses taken before a change of major and courses taken in satisfaction of the requirements of a previously earned graduate degree. Courses related to the degree program that are taken in excess of degree requirements are normally included in the program plan. It is not possible to delete a course from the GPA once the course has been taken, although an exception is made if the statute of limitations is exceeded, at which time it is dropped from the program plan and from both the program and overall GPAs. Courses are not otherwise dropped from the overall GPA except by special action of the Graduate Council following a change of major. If no degree was earned in the first major and the courses are clearly not applicable to the new major, the council can approve deletion from the overall GPA.

Grades of S and U are used as progress grades in thesis, dissertation, design project, research and internship, and as final grades in some zero-credit seminar courses. They are similar to grades of P and F except that they carry no credit, and S grades (when used as progress grades) may be replaced at any later time by credit-carrying grades of P. U grades remain on the transcript permanently, but like grades of S, they do not affect the GPA.

The basic requirement for receiving any master’s degree is a GPA of at least 3.0 on a 4.0 scale where A = 4, B = 3, C = 2, D = 1, F = 0. Both the overall GPA and the applicable program GPA must be 3.0 or greater for a master’s degree to be awarded.

For a doctoral student, a 3.2 program GPA represents minimal satisfactory academic performance and is required for admission to candidacy and for graduation. In addition, an overall GPA of at least 3.0 is required, based on all courses taken as a graduate student at Florida Tech.

**Statute of Limitations**

**Master’s Degree**

A seven-year statute of limitations is in effect on all work applied toward a master’s degree at Florida Tech. All coursework and thesis research, including thesis/design project acceptance or final program examination, must be completed within a total elapsed time span of not more than seven years.

An academic unit head may approve a waiver of the statute of limitations for up to six semester credit hours of coursework taken either at Florida Tech or elsewhere, subject to the following conditions:

- Any course so approved must have been completed within the previous 10 years, and with a grade of at least B.
- Only those courses where course content has not changed significantly in the intervening years may be approved.
- The student must provide evidence of current mastery of the course content.

The academic unit head must notify the registrar in writing of the action.

In the case of a waiver request that does not conform to these requirements, or a request involving more than six semester credit hours, the academic unit head may either deny the request outright or submit it to the academic dean, accompanied by proof of current mastery based on a written examination endorsed by Florida Tech faculty, with a recommendation for a favorable decision.

A waiver is in effect for a period of seven years from the time it is approved.

Courses over the time limit for which the limit has not been waived may be removed from GPA calculations upon written request.

**Extended Studies Division Full Course Load and Time Limits**

The normal course load for a part-time Extended Studies Division student is two courses per semester, each requiring one class attendance each week. This allows completion of a degree program in less than two years; less if transfer credits are accepted. Although a degree program may be extended beyond two years, the cumulative work including transfer credits may not span an elapsed time of more than seven years.

**Doctor of Philosophy (Ph.D.) Degree**

The statute of limitations for students pursuing a Ph.D. degree is five years from the end of the academic semester during which the comprehensive examination is successfully completed. If this period should expire before completion of the degree and if the student wishes to continue enrollment in the program, a new doctoral committee must be formed and the comprehensive examination must be readministered. This new examination should reflect developments of importance in the area of study occurring since the first examination, as well as areas of general importance.

**Doctor of Psychology (Psy.D.) Degree**

A student who has not completed the requirements for the degree within seven years of initial enrollment will no longer be considered a candidate for the degree. Appeals for reinstatement of candidacy status must be directed to the Graduate Council.

**Probation and Dismissal**

**Master’s Students**

Master’s students must continue to demonstrate academic proficiency in coursework and must show reasonable progress toward the 3.0 GPA required for graduation.

Master’s students whose cumulative GPA falls below 3.0 are no longer considered to be in academic good standing. Students are returned to good standing by earning a minimum cumulative GPA of 3.0.

Students no longer in academic good standing who fail to meet the required minimum term GPA of 3.0 will have their academic standing sequentially through warning, probation, suspension and dismissal as outlined below. Students’ transcripts will be annotated at the end of each term. Students and their academic unit will be informed about the student’s academic standing in writing at the end of any term when the cumulative GPA is below 3.0.

**Academic Warning:** When the student began the term in academic good standing but did not maintain the minimum 3.0 cumulative GPA required.

**Academic Probation:** When the student began the term in academic warning but did not achieve the minimum 3.0 term GPA required.

**Academic Suspension:** When the student began the term on academic probation but did not achieve the minimum 3.0 term GPA required. Suspended students will not be permitted to attend earlier than one calendar year from the date of suspension. Any exceptions must be approved by the academic unit head, college dean and the graduate programs administrator.

**Academic Dismissal:** When the student began the term on probation after having been suspended but did not achieve the minimum 3.0 term GPA required. Dismissal will also result any time a graduate student earns a term or cumulative GPA less than 2.0, or two or more grades of U in courses taken as a graduate student.

In addition, any of the following conditions will result in immediate academic dismissal:

- A term or overall GPA below 2.0 at any time.
- Two or more grades of U in any courses taken as a graduate student.
- Judgment by the Graduate Council that the student is not making satisfactory academic progress, or that the academic efforts of other students are hampered by his or her presence.

**Appeals for Reinstatement**

Academic dismissals may be appealed for educationally sound reasons in writing and as instructed in the dismissal letter. Appellants must present relevant information. The academic unit head writes a recommendation to reinstate or deny reinstatement and forwards the appeal and recommendation to the dean of the appellant’s college for a decision. Appellants will not be permitted to register for or attend classes until after a favorable decision about the appeal has been made.

**Appeals from Reinstatement Denials**

A denial of the request for reinstatement will usually be considered final. Students who have additional, different or new circumstances may contact their academic unit head. A re-appeal will only be considered on the basis of new information not previously submitted by the student. The student will not be permitted to register for or attend class until a final decision on any re-appeal has been reached.

**Reinstatements**

Reinstated students will be so notified in writing and will be placed on probation. Their transcripts will be so annotated. Failure to meet reinstatement conditions will result in another dismissal.

**Appeals from Second and Subsequent Dismissals**

Appeals for reinstatement from a second or subsequent dismissal may only be submitted after one calendar year from the end of the last full semester attended, and only after the student meets with his or her adviser.

**Doctoral Students**

The basic standard for successful performance at the doctoral level is a minimum 3.2 program GPA and an overall minimum GPA of 3.0. The program GPA for a doctoral student includes all courses shown on the program of study as applying toward the doctoral degree, both graduate numbered and undergraduate numbered. The overall GPA is based on all coursework taken at Florida Tech while enrolled as a graduate student.

A program GPA less than 3.2 after 15 or more credit hours will result in probation; if the GPA of 3.2 is not attained after completing the probationary semester, the Graduate Council will consider dismissal of the student. An overall GPA below 3.0 or two failing grades (D, F or U) at any stage of the doctoral program will result in the student’s dismissal.

If a student fails to maintain satisfactory progress in coursework and/or research, as determined by the graduate faculty of the student’s major academic unit, academic dismissal may be recommended regardless of the GPA. In such cases, concurrence of the Graduate Council is required.

A dismissed student has the right to appeal the dismissal by submitting a written request for reinstatement as instructed in the dismissal letter, stating the basis for the appeal. The Graduate Council considers all appeals.

**Dismissal for Misconduct**

Student conduct that violates the legal or ethical standards of the university may result in mandatory withdrawal from all classes and denial of permission to register in future terms for either a definite or indefinite period of time.

Examples of academic misconduct that could result in these actions include cheating, plagiarism, knowingly furnishing false information to the university, or forging, altering or misusing university documents or academic credentials.

Examples of research misconduct include fabrication, falsification, plagiarism, misappropriation of ideas of others or failure to comply with legal requirements governing research.

A dismissed student has the right to appeal the dismissal by submitting a written request for reinstatement as instructed in the dismissal letter.

N. Thomas Stephens, Ph.D.; Nathaniel E. Villaire, Ed.D.

Mission Statement and Overview
The College of Aeronautics mission is to prepare students for success and advancement in the aviation professions; advance aviation knowledge through faculty and student research, scholarly activity and projects; and encourage and enable student and faculty service to the university, community and aviation professions.

The seven baccalaureate degree programs of the College of Aeronautics include aviation management, aeronautical science and aviation meteorology curricula, each with flight and nonflight options, and aviation computer science. The aviation management, aeronautical science and aviation computer science programs are fully accredited by the Aviation Accreditation Board International (AABI). The college offers a Master of Science in Aviation with options in airport development and management, and applied aviation safety; and a Master of Science with options in aviation human factors and human factors in aeronautics (online).

Pilot training is an integral part of each flight option, and academic credit is awarded accordingly. Pilot training is conducted in conjunction with the normal academic programs, either as required or elective courses.

The College of Aeronautics is a member of the University Aviation Association and the Aviation Accreditation Board International (AABI). University flight training is conducted under the provisions of Federal Aviation Regulations Part 141.

Five aviation organizations for students are sponsored by the College of Aeronautics: Alpha Eta Rho, the national aviation fraternity; Women in Aviation International; the International Society of Air Safety Investigators; Collegiate Aviation Business Executives (CABE), and the Falcons Intercollegiate Flight Team.

The College of Aeronautics faculty and administrative offices, laboratories and academic classrooms are located in George M. Skurla Hall. Flight training is available in both fixed wing and rotary wing (helicopter) aircraft. Fixed-wing aircraft flight training is conducted by FIT Aviation, LLC, a subsidiary of the university that maintains and operates a fleet of more than 30 single- and multiengine training aircraft at nearby Melbourne International Airport. Bristow Academy Inc. conducts helicopter flight training through a partnership contract with the university. The academy maintains and operates a fleet of approximately 75 modern helicopters at Space Coast Regional Airport, Titusville, Florida. Both towered airports host a mix of air carrier and general aviation traffic and include modern instrument landing systems and radar approach control facilities. They provide an excellent environment for professional flight training. Superb Florida weather allows efficiency of scheduling and continuity of training, and adds to the training experience. Numerous general aviation and commercial service airports in Central Florida offer valuable opportunities for varied airport approaches, landings and takeoffs.

Admission
Entering freshmen with previous flight training and at least the FAA Private Pilot Certificate will be given the opportunity for advanced placement. Credit for certain flight and ground courses may be
Transfer students may receive college credit for previous flight and ground training at the discretion of the division director. Transfer credit for flight training is normally granted only when the student is first enrolled, and after an evaluation that may include a flight evaluation.

**Dismissals**

Dismissal policies for academic programs of the College of Aeronautics are the same as those stated in the *Academic Overview* section. However, due to the high-performance standards required for safety in flying, an added degree of commitment to meet those standards is required of the student pilot undergoing flight training. The dean of the College of Aeronautics retains the right to place on probation, suspend or administratively withdraw any flight student from any university flight-training course, if such action is judged to be warranted by the student’s behavior.

**Flight Programs**

Flight courses for academic credit are available to all interested Florida Tech students. Students seeking admission to flight training must be examined by an FAA-designated aviation medical examiner and have an FAA medical certificate and student pilot certificate before the start of flight training. Applicants intending to seek a Commercial Pilot Certificate must have 20/20 vision in each eye, or be correctable to 20/20. Medical examinations should be done far enough in advance of university admission to allow any potential problems or questions to be resolved.

The FAA requires any pilot’s license applicant to speak, read, write and understand the English language. Flight students whose home language is not English must demonstrate English language proficiency in one or more of the methods described under “Languages and Linguistics” under the humanities and communication department of the College of Psychology and Liberal Arts in the *Degree Programs* section.

In addition, the U.S. Transportation Security Administration (TSA) requires U.S. citizen flight students to present a government-issued photo identification document such as a driver’s license and an original passports or original (raised seal) birth certificate for U.S. citizenship verification. International flight students must comply with TSA requirements for a security threat assessment as specified in the Alien Flight Student Program. Generally, this process requires approximately 30 days to complete. Refer to www.flightschoolcandidates.gov for details.

Prospective students interested in any university flight training should be aware of weight and height limitations that may hinder or preclude safe and effective training. Training aircraft and many other aircraft in general use cannot accommodate persons with heights of less than 60 inches or greater than 77 inches, or body weights greater than 260 pounds (220 pounds for aerobatic training aircraft, which may be required for Flight Instructor training). Prospective students who may be affected by these limitations should make their situation known to admissions and the College of Aeronautics representatives at the earliest point in the application process for a case-by-case enrollment evaluation.

A summer program is offered by F.I.T. Aviation to prospective students who have not yet started their flight training. This program offers students an opportunity to become acquainted with the flight environment by participating in an intensive two-month ground and flight-training course. A student who is successful in the program may earn a Private Pilot Certificate and may enter the fall semester at Florida Tech with academic (transfer) credit for Flight 1 (AVF 1001) and Aeronautics 1 (AVT 1001) for a total of five semester (transfer) credit hours. The credit will be applicable to all flight degrees offered by the College of Aeronautics, and may be used as elective credit in many other Florida Tech degree programs. Similar helicopter flight training courses are offered by Bristow Academy that may be substituted for fixed-wing flight training requirements.

Professional, vocational and recreational flight training are also provided by F.I.T. Aviation, and qualified pilots may rent aircraft from them. They also offer training for FAA private, commercial and certified flight instructor certificates, as well as training for the FAA ratings for instruments, multiengine, instrument instructor and multiengine instructor. Two aerobatics courses are also offered.

**Degree Requirements**

Candidates for College of Aeronautics degree programs must complete the minimum course requirements as outlined in the appropriate curriculum. Deviation from the recommended program may be made only with the approval of the division director or dean.

**Graduate Program Plan**

Master’s level graduate students are required to prepare an approved graduate program plan (GPP) in consultation with their academic advisers, no later than one month prior to the time nine semester credit hours of graduate coursework have been completed in order to identify an area of specialization and facilitate successful program completion. The student’s GPP then becomes the student’s study contract with the university.

**Thesis Research**

If a thesis is required in the student’s GPP (depending on curriculum requirements), the student selects a faculty member, with the approval of their academic adviser and the graduate program chair, to serve as their thesis adviser. The adviser may or may not be the academic adviser. With the assistance of the thesis adviser, the student selects an advisory committee and defines a research topic. The committee must include at least one other member from the College of Aeronautics and one from another degree-granting department of the university. The thesis adviser and the committee offer assistance and direction to the student and serve as a review board to ensure that thesis requirements are met. After completion of the thesis, the thesis adviser and committee conduct the oral defense of the thesis as described under “Master’s Degree Requirements” in the *Academic Overview* section. Three to six credits are awarded for successful completion of the thesis. Detailed procedures and policies for thesis and advanced aviation research project defense, and for comprehensive examinations are covered in College of Aeronautics graduate policy documents.
Fast Track Master’s Program for College of Aeronautics

Honors Students

The fast track program allows College of Aeronautics undergraduate students who have completed at least 35 credit hours at Florida Tech with an earned GPA of at least 3.4 to complete a master’s degree program at an accelerated pace. Students who have completed the sixth semester of undergraduate work (at least 95 credit hours) and are accepted into the College of Aeronautics fast track program may earn graduate-level credit hours during their senior year and, when earning at least a B grade, apply up to six graduate credit hours to both the bachelor’s and master’s degrees. Typically, the graduate courses would satisfy free and aviation elective undergraduate requirements, but other substantiated alternatives may be considered. The graduate credit hours applied to both degrees are treated as transfer credit (GPA does not apply) when applied toward the master’s degree. When appropriate, the division director may grant exceptions to the fast track program requirements. Interested students should consult the College of Aeronautics graduate program chair for more information about graduate and fast track programs available in the College of Aeronautics.

Flight Training Program

The flight training sequence for all flight option bachelor’s degrees consists of a sequence of four lower-division flight courses (AVF 1001 through AVF 2102 for fixed-wing or AVF 1001 through AVF 2008 for helicopter) plus additional upper-division flight credit hours as specified in each degree program. The lower-division sequence is an integrated series of courses designed to qualify the student for the commercial pilot certificate with instrument, flight instructor or multiengine ratings and a minimum of 190 hours of flight training. Aeronautical science–flight requires six credit hours of upper-division flight courses in addition to the sequence of four lower-division courses. Aviation management–flight requires four credit hours of upper-division flight courses in addition to the sequence of four lower-division courses. Aviation meteorology–flight requires two credit hours of upper-division flight courses in addition to the four-course sequence.

All students seeking a bachelor’s degree with flight, regardless of previous experience or certificates, must complete four flight credit hours in the College of Aeronautics, two credit hours of which must be in a flight instructor or multiengine course (AVF 2102 or AVF 3013 satisfy this requirement). All students applying for associate’s degrees in a flight program must hold a commercial, instrument, multiengine rating and must have completed at least two credit hours in flight courses through the College of Aeronautics.

Students enrolled in the College of Aeronautics may not normally take flight training for credit outside the university-approved program.

A student seeking an FAA certificate or rating through the College of Aeronautics must complete courses pertinent to the desired certification at the university. To comply with FAA requirements, specific grades and attendance standards must be met in the following ground courses or their helicopter training counterparts: Aeronautics 1 (AVT 1001), Aeronautics 2 (AVT 1002), Aeronautics 3 (AVT 2001), Aeronautics 4 (AVT 2002) and Instructional Techniques (AVT 3101). FAA knowledge test fees are in addition to tuition.

Flight fees are in addition to tuition. Estimated flight costs for each flight course, based on historical training-time averages and current avgas costs, are published online at www.fit.edu/registrar/registration/tuitionchrgs.html and in the Fees and Expenses brochure available from the Office of Student Accounting or from Bristow Academy. Additional flight and ground training above the historical averages may be required to achieve certification. Safety is a preeminent concern of the College of Aeronautics. All aircraft are modern, well equipped and maintained to the highest standards required by the FAA. Instructors and staff are particularly safety conscious and will insist students be physically and mentally fit to fly. All flight students are subject to random or “for cause” drug testing during enrollment as flight students. Any confirmed use of illegal drugs or chronic abuse of alcohol is cause for immediate dismissal from all flight training programs. Insurance coverage is automatically provided for all students operating aircraft under the university program.

Aviation Management Internship Program

A six-credit aviation management internship program (AMIP) is offered to eligible senior students. The program consists of two courses, AVM 4600 and AVM 4603. This highly successful and popular program involves placement of students in entry-level management positions for a semester with air transportation, air commerce, aviation consulting, airports and governmental organizations throughout the United States and in selected foreign locations.

A management intern performs a variety of aviation management tasks under the supervision of working professionals, submits a series of graded written reports and presents a formal and written final report to selected students and faculty following the internship assignment.

To be eligible, a student must have completed all major requirements for the first three years of the curriculum, have a cumulative grade point average of at least 2.8 and be approved by a faculty committee.

Students enrolling in AMIP must have one full semester or summer term remaining after completion of AMIP. As a consequence, most students will enroll in AMIP during their last summer or the first semester of their senior year. The decision to enroll in AMIP must therefore be made and formalized with the student’s adviser no later than early in the second semester of the junior year. Students planning to substitute AMIP credits for elective credit should make this decision early in their programs.

Electives

Electives are included to give the student reasonable flexibility and diversity within the constraints of total curriculum length and requirements of various accrediting and certification agencies.

Elective flight courses include all instructor ratings, advanced instrument proficiency, air-taxi training, aerobatics and other specialized fixed-wing and helicopter flight courses.

Nonflight students are encouraged to enroll in appropriate flight courses for personal and professional enhancement using elective credit.

Six credits of aviation management internship may be substituted for any free or AVx/BUS electives.
**Air Traffic Control Program**

The college offers an air traffic control (ATC) specialization in conjunction with any of its seven bachelor’s degrees. The ATC specialization meets the requirements of the FAA’s Air Traffic-Collegiate Training Initiative (AT-CTI) program and is FAA-approved.

This program provides graduates with in-depth knowledge of ATC and the aviation industry to ensure graduates possess the requisite knowledge, skills and abilities to succeed in testing and training, and as air traffic controllers.

While no AT–CTI program graduates are guaranteed employment, the FAA considers these graduates to be a valuable hiring source for air traffic control specialist positions nationwide. On successful completion of this program and recommendation from the dean, graduates are further required by the FAA to achieve a passing score on the FAA-administered Air Traffic Selection and Training (AT-SAT) test battery, attend the FAA academy (bypassing the first five weeks) and successfully complete the on-site initial qualification training.

**Curriculum**

To successfully complete this program in conjunction with a bachelor’s degree from the College of Aeronautics, the following seven named courses (21 credit hours) must be completed either as required courses within a degree, as electives or as a combination of both.

**International Programs**

The College of Aeronautics is partnered with France’s Ecole Nationale de L’Aviation Civile (ENAC) to allow selected third-year ENAC students to attend Florida Tech and earn Florida Tech’s Master of Science in Aviation—Airport Development and Management Option with one additional year of study and an industry internship. Graduates of that program receive the IENAC Diploma from ENAC and the Master of Science in Aviation from Florida Tech.

In a second partnership, the French Euro-American Institute (EAI) offers the first two years of the College of Aeronautics’ aviation management and aeronautical science bachelor’s degree programs; and EAI students seamlessly complete the last two years of the degree programs, to include flight training at Florida Tech.

Florida Tech is partnered with the Universidad Tecnologica de Panama (UTP) in the Republic of Panama to offer Florida Tech’s aviation management program including flight options. Aviation-related courses are taught by College of Aeronautics faculty who travel to Panama, and the balance of courses are taught by UTP faculty at a dedicated academic facility near the Panama Canal.

This curriculum prepares the graduate for a career in the global aeronautical science and technology industry and government regulatory agencies. The graduate is provided a strong foundation in mathematics, physics, aeronautical sciences, aeronautical technology and the regulated international aviation industry.

Aviation Computer Science, B.S.

Major Code: 7104  
Degree Awarded: Bachelor of Science  
Age Restriction: N  
Admission Status: undergraduate  
Delivery Mode/s: classroom  
Location/s: main campus

This curriculum provides a strong background in computer science as related to several facets of the aviation industry, such as aircraft systems development, air traffic control, airspace management, information support systems and aviation planning.

Aviation Management, B.S.

Major Code: 7114  
Degree Awarded: Bachelor of Science  
Age Restriction: N  
Admission Status: undergraduate  
Delivery Mode/s: classroom  
Location/s: main campus

This curriculum prepares the graduate for an aviation management career focused on airport management and development, and air transportation management. Graduates are provided with a solid educational foundation in aviation, business, airport management and development, and air transportation management appropriate for a challenging career in the international aviation industry. Graduates may qualify for the 4+1 MBA program by selecting appropriate business course electives.

Aviation Management – Flight, B.S.
Major Code: 7113
Degree Awarded: Bachelor of Science
Age Restriction: N
Admission Status: undergraduate
Delivery Module/s: classroom, flight
Location/s: main campus

This curriculum prepares the graduate for a career as a professional pilot with aviation business career options in airport management and development, and air transportation management. Graduates will achieve at least fixed-wing commercial pilot, instrument, multiengine ratings, or helicopter commercial pilot, instrument, flight-instructor ratings. They are provided a solid educational foundation in business, airport management and development, and air transportation management. Graduates may qualify for the 4+1 MBA program by selecting appropriate business course electives. On completion of the first two years of the curriculum plus a computer literacy (CL) course with a cumulative GPA of 2.0 or higher, the student may petition for the award of the Associate of Science in Aviation Management—Flight.

This curriculum provides a background in meteorology, aeronautical science and the appropriate physical sciences. A student completing the program meets the requirements of the U.S. Office of Personnel Management for employment by the federal government as a meteorologist. Graduates are prepared for careers with major airlines, corporate aviation and the FAA, as well as international organizations.

B.S. and M.S. degrees in meteorology are also offered as options in the environmental sciences program in the College of Engineering.

<tr>
<td>Admission Materials: 3 letters of recommendation, résumé, objectives, GRE</td>
<td></td>
</tr>
</tbody>
</table>

The Master of Science in Aviation (MSA) is designed to help meet the professional growth needs of persons interested in a wide range of aviation careers.

The degree is especially relevant for those who have earned baccalaureate degrees in aviation and those who have worked in the aviation field and now require more specialized knowledge. Generally, persons interested in careers in airport or airline management, airport consulting and governmental organizations involved in the management or regulation of airports should select the airport development and management option. Persons interested in aviation safety, accident investigation, technical aviation consulting and educational, regulatory or investigative positions in government or trade organizations would find the applied aviation safety option most appropriate.

**Admission Requirements**

The applicant to the Master of Science in Aviation—Airport Development and Management program must have earned a bachelor’s degree, or its equivalent, from an institution of acceptable academic standing. To be considered for admission, the student’s academic and professional record must indicate a high probability the applicant will be able to pursue graduate work satisfactorily. Undergraduate degrees need not be in aviation; however, preparatory coursework may be required in specific areas to assure successful pursuit of the MSA. Such coursework is determined by the College of Aeronautics before admission. The student is advised of any such requirements before final acceptance.

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**

The Master of Science in Aviation—Airport Development and Management is conferred on students completing the selected degree requirements as specified below.

**Curriculum**

Students have the option of either a thesis (33 credit hours) program of study, or a nonthesis (36 credit hours) program of study with a management or development emphasis.

Admission Requirements

The applicant to the Master of Science in Aviation—Applied Aviation Safety program must have earned a bachelor's degree, or its equivalent, from an institution of acceptable academic standing. To be considered for admission, the student's academic and professional record must indicate a high probability the applicant will be able to pursue graduate work satisfactorily. Undergraduate degrees need not be in aviation; however, preparatory coursework may be required in specific areas to assure successful pursuit of the MSA. Such coursework is determined by the College of Aeronautics before admission. The student is advised of any such requirements before final acceptance.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements

The Master of Science in Aviation—Applied Aviation Safety is conferred on students completing the selected degree requirements as specified below.

Curriculum

The applied aviation safety program requires the satisfactory completion of a minimum of 36 credit hours of approved coursework including a maximum of six hours of Thesis (AHF 5999).

The Master of Science in Aviation (MSA) is designed to help meet the professional growth needs of persons interested in a wide range of aviation careers.

The degree is especially relevant for those who have earned baccalaureate degrees in aviation and those who have worked in the aviation field and now require more specialized knowledge. Generally, persons interested in careers in airport or airline management, airport consulting and governmental organizations involved in the management or regulation of airports should select the airport development and management option. Persons interested in aviation safety, accident investigation, technical aviation consulting and educational, regulatory or investigative positions in government or trade organizations would find the applied aviation safety option most appropriate.

Delivery Mode/s: classroom
Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Human factors refers to the field of study that attempts to identify the principles of human/machine interaction, and applies these principles to the design and operation of engineered systems. Thus, the field is both a rigorous research domain rooted in cognitive, physiological and engineering theory, and an applied science with an intimate and direct connection to the operational world.

Although the range of engineered systems of interest in human factors is very wide, this degree concentrates on aviation-related human factors studies. Such studies range from aircraft cockpit design and aircraft maintenance methods and procedures to complex ground-based entities such as the National Airspace System. Human factors is now recognized as an indispensable component of systems design and evaluation, accident investigation and prevention, simulation, training, procedures development and system performance testing. Considerable research is being conducted in this field by government and private entities around the world.

In addition to its advantageous location on the Space Coast, Florida Tech has significant university assets that enhance its potential for aviation human factors research and education.
Admission Requirements
An applicant to the Master of Science in Aviation Human Factors program must have earned a bachelor’s degree, or its equivalent, from an institution of acceptable academic standing. Undergraduate coursework should include statistics and computer programming in at least one higher-level language. Some aviation background or education is also required. Deficiencies in these areas may be made up through courses taken at the university concurrent with the aviation human factors program coursework. Preference is given to candidates with special skills and experience in the fields of aviation software design, engineering, aeronautics, applied psychology or computer science.

General admission requirements and the process for applying are presented in the Academic Overview section.

Curriculum
The Master of Science in Aviation Human Factors requires the satisfactory completion of a minimum of 36 credit hours of approved coursework including a maximum of six hours of Thesis (AHF 5999).

Professors
LuAnn G. Bean, Ph.D., accounting choice decisions, financial reporting and valuation, internal auditing, information technology.
S. Ann Becker,* Ph.D., University Professor, Web usability and accessibility, human-computer interaction, database technology, gerotechnology, software engineering, contract management.
Isabella D. Bunn, Ph.D., J.D., Robert L. Long Professor of Ethics, global ethics, corporate social responsibility, human rights, the right to development, international economic law.
Anthony J. Catanese, Ph.D., University President, real estate finance, architecture, urban planning.
Dennis J. Kulonda,* Ph.D., entrepreneurship, innovative operations structure and infrastructure, enterprise resource planning.
Robert E. Niebuhr, Ph.D., organizational behavior, leadership, strategic decision-making.
T. Roger Manley, Ph.D., behavior of individuals in work organizations, organizational effectiveness and productivity, work redesign, organizational change and development, measurement and management of work-related stress, measurement of organizational culture.
Scott R. Tilley,* Ph.D., software engineering, system evolution and program redocumentation.
Timothy J. White, D.P.A., management.
Kermit C. Zieg Jr., Ph.D., finance, management.

Associate Professors
Paul Battaglia, D.B.A., management.
Deborah S. Carstens,* Ph.D., human error, process and safety optimization, patient safety, human-computer interaction, usability.
Catherine Cook, Ph.D., marketing, business administration.
Jeffrey Cross, D.B.A., business administration.
B. Andrew Cudmore, Ph.D., quality perceptions, Internet marketing, persuasion knowledge, customer/salesperson interaction, store brand management, customer complaining behavior.
Amitabh S. Dutta, Ph.D., corporate policy, investments, portfolio performance, pedagogy.
Atef S. McCampbell, D.B.A., management.
Martha L. Sale, D.B.A., cost allocation, advanced or emerging management practices, performance measurement, balanced scorecard.
Denise V. Siegfeldt, Ph.D., management, organizational development.
Michael H. Slotkin, Ph.D., international economics, strategic trade policy, managerial economics, environmental and resource economics.
Alexander R. Vamosi, Ph.D., economic impact assessment, ecotourism, monetary policy, economic growth.
Joan Wigenhorn, Ph.D., international finance, born globals, mergers, acquisitions.
Michael Workman, Ph.D., information security behaviors, technology and human in factors in work-habit improvement.

**Assistant Professors**
Rhoda Bags, Ph.D., software engineering, multimedia in the classroom, reverse engineering of systems, systems architectures.
John C. Barranti, Ed.D., organizational behavior and development, human resources management, interpersonal relations.
Samuel K. Doss, MBA, brand evangelism, consumer brand identification, brand development.
Carolyn J. Fausnaugh, Ph.D., strategic management, entrepreneurial studies.
Terry W. Raney, J.D., legal issues, management.

*Faculty holding joint appointments at the university.

**Instructors**
Trudi J. Infantini, MBA, accounting.
Thomas J. Stauffacher, M.S., industry education programs

**Adjunct Faculty**
V.G. Gordon, Ph.D.; J.C. Mitchell, M.S.; D.W. Mutschler, Ph.D.
D.B. Weddle, Ph.D.; K.R. White, Ph.D.; D.L. Wildman, J.D.

**Professors Emeriti**
John F. Clark, Ph.D.; Gerald F. Goldberg, Ph.D.; A.T. Hollingsworth, Ph.D.;

**Mission Statement and Overview**
Curricula in the Nathan M. Bisk College of Business are designed to develop and expand a student's skills and capabilities in preparation for successful leadership in today's dynamic business environment. The programs provide a foundational knowledge in all areas of business and expose students to ethical decision-making and being responsive to a rapidly changing global workplace. Additionally, each student in the college becomes involved in research that provides an exposure to interrelationships inherent in a knowledge-based competitive environment.

On-campus undergraduates experience real-world challenges through a program that requires a hands-on work assignment during the senior year. This program is assisted by the college's advisory board, whose charter is to support the programs of the college and make available opportunities for students to prepare for their professional careers.

The faculty of the college are dedicated to staying on the cutting edge of their disciplines and to offer students the chance to grow and reach their full potential. The small class sizes and activities available to the students create a close student-faculty relationship from the first class all the way to graduation.

The Nathan M. Bisk College of Business offers a variety of discipline-based programs at both the undergraduate and graduate level. All programs include a global perspective of today's economy and the use of technology in furthering the business enterprise. Programs are provided in three delivery modes—on campus, at one of ten off-campus sites and online. All emphasize quality of instruction and the best preparation possible for business students preparing for one of the most exciting professional careers available today.

The college offers associate's degrees in accounting, business administration, computer information systems and healthcare management; bachelor's degrees on the Melbourne campus in accounting, business administration, business and environmental studies, information systems, international business, marketing and sports management, and online in accounting, business administration and computer information systems. The master of business administration is offered on the Melbourne campus and the master of science in information technology is offered online. Degrees offered off-campus through the Extended Studies Division (ESD) provide a number of specialized master's degrees in addition to the bachelor of science in logistics management and master of business administration. ESD students may also take some of their courses online through the division's Virtual Campus.

Degree programs offered by the ESD include acquisition and contract management, business administration, computer information systems, human resources management, information technology, logistics management, management, materiel acquisition management, project management, quality management, space systems, space systems management and systems management.

Extended Studies began in August 1972 as “Off-Campus Programs,” when 42 students enrolled in a master's degree program in electrical engineering at the Naval Air Test Center, Patuxent River, Maryland. From that modest beginning, the graduate programs have grown substantially with students enrolled in 36 degree programs. Extended studies programs that benefit employees of industry were added in 1976 when in-plant courses started with several firms and the municipal government in St. Petersburg, Florida, and with Martin Marietta Aerospace in Orlando, Florida.

Florida Tech's extended studies and distance learning programs are conducted in a very traditional manner with admission and graduation standards the same as those required on campus. Curricula and course content are tailored to meet the needs of the students and their employers, while maintaining the highest possible academic quality and integrity. Class times and locations are selected for the convenience of the students. Since the 1972 beginning, over 16,000 Florida Tech master's degrees have been conferred on off-campus candidates representing the military services, federal and local government employees and a wide variety of businesses and industries.

Courses are open to those seeking degrees as well as those wishing to take selected subjects for professional development. Degree requirements can be met by a combination of Florida Tech courses, transfer credits from other accredited institutions and transfer credits from certain military schools for those courses designated by Florida Tech. Information on the specific military courses accepted is available from the site director.
Fast Track Master’s Programs for Undergraduates

The fast track program allows all Florida Tech undergraduate students who have completed at least 95 credit hours (at least 35 credit hours at Florida Tech) with an earned GPA of at least 3.25 to complete the MBA degree program at an accelerated pace.

Nathan M. Bisk College of Business students who have completed at least 95 credit hours and students in all other colleges who have completed the sixth semester of undergraduate work who are accepted into the Nathan M. Bisk College of Business fast track program may earn graduate-level credit hours during their senior year and, when earning at least a B grade, apply up to six graduate credit hours to both their bachelor’s and MBA degrees (subject to approval of their undergraduate program adviser).

Typically, graduate courses would satisfy required business courses (business majors) or other business, free or technical elective undergraduate requirements (non-business majors). Graduate credit hours applied to both degrees are treated as transfer credit (GPA does not apply) when applied toward the MBA degree.

Fast track students who are majoring in business are encouraged to complete Essentials of Business Development 2 (BUS 5602) and either Organizational Behavior (BUS 5450) or a BUS 5000-level or above graduate elective. Non-business majors are encouraged to complete the two course foundation sequence, Essentials of Business Development 1 and 2 (BUS 5601 and BUS 5602).

Interested students should consult the Nathan M. Bisk College of Business associate dean of academics and their department head for more information about graduate and fast track programs available in the college.

The Associate of Arts in Accounting provides preparation for a variety of accounting careers in business, government and not-for-profit organizations. It includes basic instruction in the theory and practice of financial accounting, managerial accounting, cost accounting, accounting information systems and tax, as well as a broad knowledge of a range of business disciplines. It affords the opportunity to earn credits applicable to the Bachelor of Arts in Accounting.

## Accounting, B.A.

**Major Code:** 7610  
**Degree Awarded:** Bachelor of Arts  
**Age Restriction:** Y  
**Admission Status:** online undergraduate  
**Delivery Mode/s:** online only  
**Location/s:** Florida Tech University Online

The Bachelor of Arts in Accounting provides depth of knowledge in the theory and practice of financial and managerial accounting and business law, and a basic knowledge of auditing accounting information systems and tax, as well as a broad knowledge of a range of business disciplines. It prepares the student for careers in a variety of business, government and not-for-profit organizations. The deeper understanding of accounting topics may help students prepare for a wider range of accounting and finance careers.

## Accounting, B.S.

**Major Code:** 7267  
**Degree Awarded:** Bachelor of Science  
**Age Restriction:** N  
**Admission Status:** undergraduate  
**Delivery Mode/s:** classroom only  
**Location/s:** main campus – Melbourne

The Bachelor of Science in Accounting is a traditional four-year accounting program providing a solid business framework. This program includes the business practicum (focused on accounting) as well as access to the corporate mentor program. Students planning to take the CPA examination in Florida receive a solid foundation preparing them for the MBA accounting track, where they can earn sufficient credits to be eligible for this examination.

Candidates for a Bachelor of Science in Accounting must complete the minimum course requirements as outlined in the following curriculum.

The Bachelor of Science in Business Administration concentrates on a combination of basic and advanced courses in the various business disciplines. These are coordinated with courses covering current developments in the field, such as environmental aspects, quantitative techniques and computer applications. The emphasis of the business administration curriculum is on relevance, and the courses are continually updated with the objective of equipping each student with a background in the science of management. This will permit students to contribute significantly to their chosen occupations after graduation.

The curriculum is designed to permit the student to acquire a foundation in all areas of business administration: accounting, business law, information systems, economics, finance, marketing, management, quantitative methods and statistics.

After graduation, the student has an excellent background in the business and management fields and can directly enter the job market, in commerce, industry, government or other areas. Many students may wish to continue into graduate school or enter one of the professional fields such as law, where they will have had an excellent undergraduate preparation.

Candidates for a Bachelor of Science in Business Administration must complete the minimum course requirements as outlined in the following curriculum.

The Bachelor of Arts in Business Administration – Accounting program provides a solid business framework. Candidates must complete the minimum course requirements as outlined in the following curriculum.
# Business Administration – Computer Information Systems, B.A.

**Major Code:** 7601  
**Degree Awarded:** Bachelor of Arts  
**Age Restriction:** Y  
**Delivery Mode/s:** online only  
**Location/s:** Florida Tech University Online

The Bachelor of Arts in Business Administration – Computer Information Systems (CIS) offers a broad base of technical knowledge combined with a strong foundation in business administration. The student gains practical experience in various strategies and formats when communicating in an organization setting, learns about decision-making processes and their implementation in a global setting and examines various software systems in terms of roles, significant features, and advantages and disadvantages. The program offers broad coverage of concepts, theories and practices in selected CIS areas for strategic support of an organization’s computing and information systems.

Business and Environmental Studies, B.S.

Major Code: 7167
Degree Awarded: Bachelor of Science
Age Restriction: N
Admission Status: undergraduate
Delivery Mode/s: classroom only
Location/s: main campus

The Bachelor of Science in Business and Environmental Studies program emphasizes the application of economics to issues associated with the environment and the use of natural resources. It familiarizes students with both analytical and decision-making techniques used in assessing environmental concerns and the use of natural resources, and develops a balanced perspective on business and the environment.

Candidates for a Bachelor of Science in Business and Environmental Studies must complete the minimum course requirements as outlined in the following curriculum.

The Bachelor of Science in Computer Information Systems (CIS) provides a solid foundation of technical skills, business knowledge, and computing technologies necessary to design, develop, and implement business solutions for today's complex systems. The program offers comprehensive coverage of CIS concepts, theories, and practices in key technology-driven areas of programming languages, database and software systems, network theory and design, decision analysis, Internet and Web applications and systems analysis and design. The program merges technical and management perspectives for strategic support of an organization's computing and information systems.

Information Systems, B.S.

Major Code: 7767  
Degree Awarded: Bachelor of Science  
Age Restriction: N  
Admission Status: undergraduate  
Delivery Mode/s: classroom only  
Location/s: main campus

The Bachelor of Science in Information Systems program integrates concepts, methods and skills necessary for developing and implementing the latest technologies for competitive advantage in a global marketplace.

The program focuses on practical applications of current and emerging technologies for strategic support of an organization’s technical goals and offers areas of emphasis in database management and information assurance for a depth of knowledge understanding today’s complex systems. Throughout the program, students apply technologies in developing a skill set necessary for real-world information and decision support.

Candidates for a Bachelor of Science in Information Systems must complete the minimum course requirements as outlined in the following curriculum.

Freshman Year

International Business, B.S.

Major Code: 7867  
Degree Awarded: Bachelor of Science  
Age Restriction: N  
Admission Status: undergraduate  
Delivery Mode/s: classroom only  
Location/s: main campus

The Bachelor of Science in International Business program emphasizes the globalization of commerce and provides students with the global skills necessary for success in the borderless world of 21st century business. The program includes a mandated summer study-abroad semester between the junior and senior years, two full semesters of language, and the option of a study-abroad international business practicum in the semester after graduation.

Students entering the international business program will be classified as pre-international business until such time as they earn a cumulative GPA of 2.75 for a minimum of 60 credit hours (15 credit hours earned at Florida Tech for transfer students with an associate degree or equivalent). Students without a 2.75 GPA by the second semester of the junior year (15 credit hours for transfer students with an associate degree or equivalent) will be transferred to the business administration degree program.

Candidates for the Bachelor of Science in International Business must complete the minimum course requirements as outlined in the following curriculum.

1. The Restricted Elective in a foreign language requires two semesters of a foreign language other than the student’s home language, either at the elementary or intermediate level.

2. International business electives may be substituted for BUS 4804.

The Bachelor of Science in Logistics Management is an upper-level two-year completion program. The requirement for admission to the program includes an associate of arts degree, associate of science degree or 61 transferable semester credit hours. The transferred hours must relate to the required courses in the degree program. Sixty (60) hours of additional instruction are offered as outlined in the program of study for the junior and senior years.

The program prepares students for positions in the private, public and military sectors with specific skills and competencies in logistics management.

## Marketing, B.S.

**Degree Programs—Nathan M. Bisk College of Business**

### Major Code: 7667

**Degree Awarded:** Bachelor of Science

**Age Restriction:** N

**Admission Status:** undergraduate

**Delivery Mode/s:** classroom only

**Location/s:** main campus

The Bachelor of Science in Marketing program is a four-year program providing a solid marketing framework. This program includes the major field practicum (focused on marketing) and a three-course industry analysis research sequence.

Students will gain appropriate background in all areas of marketing in a global economy including principles of marketing, research techniques, marketing strategy and consumer behavior among other key areas.

Candidates for a Bachelor of Science in Marketing must complete the minimum course requirements as outlined in the following curriculum.

## Sports Management, B.S.

**Degree Programs—Nathan M. Bisk College of Business**

### Major Code: 7569

**Degree Awarded:** Bachelor of Science

**Age Restriction:** N

**Admission Status:** undergraduate

**Delivery Mode/s:** classroom only

**Location/s:** main campus

The Bachelor of Science in Sports Management program is a four-year program that blends management practices with communication skills and the study of sports psychology and organizational behavior.

Students are required to complete a research project that analyzes an industry within sports, entertainment, recreation, leisure or communication, as well as 150 hours of field practica related to some aspect of the sports management curriculum.

Candidates for a Bachelor of Science in Sports Management must complete the minimum course requirements as outlined in the following curriculum.

Minors in accounting, business administration, human resources management, management, and management information systems are offered through the Nathan M. Bisk College of Business. The intent of the minor is to encourage and recognize focused study outside the student’s major. Therefore no more than nine credit hours of the minor may be named courses in the major and at least nine credit hours of the minor must be taken at Florida Tech. Additional restrictions may be placed on the minor. Requests to pursue the minor will require approval by both the major and minor program chairs.

The minor will be indicated on the student’s transcript and resulting diploma. A minor program GPA of at least 2.0 is required in order to receive recognition for the minor on the student’s diploma, and the minor is only awarded at the same time as the major. The request for a minor must be made before filing the petition to graduate and must be indicated on the petition. A complete policy statement regarding minors can be found under “Undergraduate Student Information” in the Academic Overview section.

MASHER'S DEGREE PROGRAMS

Acquisition and Contract Management, M.S.

Major Code: 8399  
Degree Awarded: Master of Science  
Age Restriction: N  
Admission Status: graduate  
Delivery Mode/s: online, classroom, off-site  
Admission Materials: GMAT, GRE recommended  
Location/s: Aberdeen, Fort Lee, Hampton Roads, National Capital Region, Northeast, Orlando, Patuxent, Redstone, Spaceport, Virtual Campus

The Master of Science in Acquisition and Contract Management is designed for adult working professionals in the public and private sectors of acquisition and contract management. The curriculum provides coverage of federal procurement practices, current issues in contracting and contract administration, legal and financial aspects of government contracting and policy issues associated with acquisition and contract management. Individuals without current experience in acquisition and contract management may be accepted into this program; however, all program prerequisite courses must be fulfilled.

The goal of the program is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in acquisition and contract administration.

Admission Requirements

The applicant to the program must have a bachelor's degree; however, the degree need not be in business administration. Students who are graduates from other fields are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive the program prerequisite requirements in the program based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The number of credit hours used in a minor must be earned in the Nathan M. Bisk College of Business. No credit by exam may be used. Minors not available to Business Administration students.

Degree Requirements

The degree of Master of Science in Acquisition and Contract Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student's approved graduate program plan. Students without adequate undergraduate background will be required to complete all or part of the program prerequisites. Students may choose elective courses from those listed below.

Students with undergraduate credits for courses that they believe are equivalent to the program prerequisites should consult with their adviser concerning waiver of those courses.

Program Prerequisites (noncredit for this program)

MGT 5000 Financial Accounting (or two undergraduate accounting courses)
MGT 5132 Basic Economics (or two undergraduate economics courses)

Note: In addition, computer literacy is required as a prerequisite. It can be demonstrated by the applicant's undergraduate coursework, passing a proficiency examination offered by the Extended Studies Division or by completing a suitable computer course.

Required Courses (9 courses)

MGT 5017 Program Management ........................................ 3
MGT 5064 Cost and Economic Analysis ................................ 3
MGT 5084 Material Acquisition Management ....................... 3
MGT 5138 Business Ethics .................................................... 3
MGT 5212 Advanced Procurement and Contract Management .... 3
MGT 5231 Government Contract Law .................................... 3
MGT 5240 Business and Legal Aspects of Intellectual Property .... 3
MGT 5270 Special Topics in Contracts Management ............... 3

Electives (2 courses)

MGT 5117 Program Management ........................................ 3
MGT 5217 Contract and Subcontract Formulation ................... 3
MGT 5218 Contract Negotiations and Incentive Contracts .......... 3
MGT 5220 Contract Management Research Seminar* ............... 3

TOTAL CREDITS REQUIRED........................................... 33

*Serves as the capstone course for this program.

Note: Electives may be taken with the approval of both the faculty adviser and the program head from other graduate-level offerings in the Extended Studies Division, or other colleges or academic units.

Computer Information Systems, M.S.

Major Code: 8372  
Degree Awarded: Master of Science  
Age Restriction: N  
Delivery Mode/s: online, classroom, off-site  
Admission Materials: GRE recommended  
Location/s: main campus, Hampton Roads, Orlando, Patuxent, Redstone, Spaceport, Virtual Campus

The Master of Science in Computer Information Systems is designed for students who seek a degree that prepares them for positions in organizations that design, develop or use computer systems. It is for students who do not necessarily have a bachelor's degree in computer science but who wish to obtain advanced training with special emphasis on component engineering, object-oriented design and analysis, and the building and maintenance of data-driven systems. The objective of the program is to meet the demand for information systems skills and to provide a path for professionals from diverse fields to rapidly transition to computer information systems career paths.
Admission Requirements

An applicant for the master’s program in computer information systems is not required to have a bachelor’s degree in computer science, but should have a background that includes mathematical proficiency beyond the level of college algebra. The GRE test is not required for admission into this degree program, but in those rare cases where the applicants’ abilities are not clear, the program chair reserves the right to require it.

General admission requirements and the process for applying are discussed in the Academic Overview section.

Degree Requirements

The Master of Science in Computer Information Systems requires a minimum of 30 credit hours, as follows:

- CIS 5080 Projects in CIS (capstone course)............................ 3
- CIS 5100 Data Structures and Programming............................ 3
- CIS 5200 Advanced Programming........................................ 3
- CIS 5220 Computer Organization......................................... 3
- CIS 5230 Operating Systems................................................ 3

Electives (15 credit hours)

At least 6 credit hours in CIS, CSE or SWE courses.

Recommended electives include any BUS, CIS, CSE, ECE, MGT, MTH, ORP, SWE or SYS courses approved by the student’s adviser and the program chair.

All students must take and complete the program capstone course, Projects in Computer Information Systems (CIS 5080), to graduate.

Human Resources Management, M.S.

The goal of the Master of Science in Human Resources Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in human resources management.

Admission Requirements

The applicant to the program must have a bachelor’s degree; however, the degree need not be in business administration. Students who are graduates from other fields are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive some or all of the program prerequisites based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The exact number of needed prerequisite courses depends on courses completed during the student’s undergraduate studies.

The GRE or the GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview of this catalog. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

Degree Requirements

The degree of Master of Science in Human Resources Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student’s approved graduate program plan. Students without adequate undergraduate background will be required to complete all or part of the program prerequisites. Students may choose elective courses from those listed below.

Students with undergraduate credits for courses that they believe are equivalent to the program prerequisites should consult with their adviser concerning waiver of those prerequisites.

Logistics Management, M.S.

Major Code: 8322
Age Restriction: N
Delivery Mode/s: online, classroom, off-site
Admission Materials: GMAT, GRE recommended

The goal of the Master of Science in Logistics Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in logistics management.

Admission Requirements

The applicant to the program must have a bachelor’s degree; however, the degree need not be in business administration. Students who are graduates from other fields are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive the program prerequisite in the program based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The exact number of needed prerequisite courses depends on courses completed during the student’s undergraduate studies.

The GRE or the GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview of this catalog. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

Degree Requirements

The degree of Master of Science in Logistics Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student’s approved graduate program plan. Students without adequate undergraduate background will be required to complete the program prerequisites. Students may choose elective courses from several of the management or related academic disciplines by securing approval of both their faculty adviser and academic unit head.

Students with undergraduate credits for courses that they believe are equivalent to the program prerequisites should consult with their adviser concerning waiver of those prerequisites.

Program Prerequisites (noncredit for this program)

MGT 5000 Financial Accounting (or two undergraduate accounting courses)
MTH 1701 College Algebra

Note: In addition, computer literacy is required as a prerequisite. It can be demonstrated by the applicant’s undergraduate coursework, passing a proficiency examination offered by the Extended Studies Division or by completing a suitable computer course.

Required Courses (9 courses)

MGT 5002 Corporate Finance ........................................... 3
MGT 5006 Introductory Managerial Statistics ........................... 3
MGT 5014 Management Information Systems ......................... 3

** Serves as the capstone course for this program.

The Master of Business Administration (MBA) degree is a graduate professional program that emphasizes breadth of preparation in the various competencies required of business executives. The MBA program is ideally suited not only for individuals with undergraduate degrees in business, but also for individuals with undergraduate degrees in other fields who have career goals that demand the competitive edge of quality graduate education in managerial decision-making.

Admission Requirements
The applicant to the master of business administration program must have a bachelor's degree; however, the degree need not be in business administration. Applicants who are graduates of non-business programs are also encouraged to apply. An applicant is assigned an adviser soon after acceptance into the MBA program, and should meet with the adviser to prepare a program plan outlining the courses needed for the MBA degree.

The admissions decision is based on a review of the application documentation including work experience, academic performance, references and written statement of purpose. Additionally, taking the Graduate Management Admissions Test (GMAT) is not a requirement, but is highly recommended for admission consideration. Individuals who take the GMAT and obtain a satisfactory score can compensate for other criteria in their application (such as academic performance or work experience). Preference for graduate scholarships will be given to applicants who take the GMAT.

General admission requirements, student classifications and the process for applying are presented in the Academic Overview section. Additional requirements regarding admission and MBA requirements may be obtained from the associate dean of academics in the Nathan M. Bisk College of Business.

*The GRE may be substituted.

Degree Requirements
The MBA degree is conferred on a student who has successfully completed 36 credit hours of required and elective courses as listed on the student's approved Graduate Program Plan.

Curriculum
Foundation Courses
The following foundation courses are required of all MBA students enrolled in their first semester at Florida Tech:
BUS 5601 Essentials of Business Development 1* .................................. 3
BUS 5602 Essentials of Business Development 2 ................................... 3

This two-course core sequence familiarizes students with the principle concepts and tools used in the main foundation disciplines of business, including accounting, financial statement analysis, economics, marketing, management principles, finance, business law and statistics. Students also learn how the various disciplines are integrated by completing two substantive projects. These courses can be completed in one semester and are designed not only for individuals with undergraduate degrees in business,
but also for students with undergraduate degrees in other fields. Full-time international students must register for at least one additional course. For more information, international students should consult with the associate dean of academics.

*Florida Tech Melbourne campus fast track students who are majoring in business can substitute an additional graduate level business elective for BUS 5601.

Core Courses
The MBA degree requires completion of a common set of six core courses including the capstone course in strategic management. These required courses are designed to prepare the student to respond to the complex business decisions that arise in today’s rapidly changing environment. As such, these courses incorporate either case studies or projects that require extensive qualitative and/or quantitative analysis.

BUS 5470 Marketing Management ..........................................3
BUS 5480 Strategic Management ..............................................3

Electives
In addition to the eight required courses, students are also required to take four elective courses (3 credit hours each). Electives can be taken with the faculty adviser’s approval from other graduate-level offerings in the Nathan M. Bisk College of Business or other colleges or academic units.

Accounting Emphasis for CPA Certification
Students with a bachelor’s degree in accounting (or the equivalent) may elect to take four courses from the following list to complete the MBA degree and achieve an accounting emphasis directed toward sitting for the Uniform Certified Public Accountant (CPA) Examination. These courses will substitute for Managerial Accounting (BUS 5431) and three MBA electives.

BUS 5432 Advanced Accounting
BUS 5433 Advanced Problems and Current Topics
BUS 5434 Advanced Auditing Theory and Application
BUS 5435 Tax and Financial Accounting Research
BUS 5436 Government and Nonprofit Accounting
BUS 5437 Information Systems Auditing/Control
BUS 5438 Fraud Examination
BUS 5439 Forensic Accounting

The Master of Business Administration – Accounting degree program may be completed in two years or less and provides the high-level knowledge and range of skills to meet the challenges of today’s complex global business.

Rooted in the case method approach, this intensive MBA program offers a uniquely collaborative, hands-on education. The program covers accounting policy.

The two-course sequence Essentials of Business Development 1 and 2 (BUS 5601 and BUS 5602) culminates in a fully integrated business plan. Each student has the opportunity to choose a business and progressively bring it to fruition through critical business concepts from statistics and managerial economics to marketing.

Students actively engage in case study analysis and exercise leadership and teamwork skills. The program combines academic principles with practical, real-world applications to result in a solid business foundation.

Curriculum
Foundation Courses
The following foundation courses are required of all MBA students enrolled in their first semester at Florida Tech:

BUS 5601 Essentials of Business Development 1 3
BUS 5602 Essentials of Business Development 2 3

This two-course core sequence familiarizes students with the principle concepts and tools used in the main foundation disciplines of business, including accounting, financial statement analysis, economics, marketing, management principles, finance, business law and statistics. Students also learn how the various disciplines are integrated by completing two substantive projects. These courses can be completed in one semester and are designed not only for individuals with undergraduate degrees in business, but also for students with undergraduate degrees in other fields. Full-time international students must register for at least one additional course. For more information, international students should consult with the associate dean of academics.

Core Courses
The MBA degree requires completion of a common set of six core courses including the capstone course in strategic management. These required courses are designed to prepare the student to respond to the complex business decisions that arise in today’s rapidly changing environment. As such, these courses incorporate either case studies or projects that require extensive qualitative and/or quantitative analysis.

Master of Public Administration

Degree Awarded: Master of Science
Admission Status: graduate
Location: Hampton Roads, Northeast, Orlando, Patuxent, Redstone, Virtual Campus
Admission Materials: GMAT, GRE recommended

The goal of the Master of Public Administration is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in public administration.

Admission Requirements
The applicant to the Master of Public Administration program must have a bachelor’s degree from a regionally accredited university. The bachelor’s degree need not be in public or business administration; however, applicants may be assigned academic prerequisites to complete based on deficiencies in their undergraduate studies preparation.

The GRE or GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview section. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

Degree Requirements
The MPA is conferred on students who have successfully completed 36 credit hours of graduate work plus other course requirements as listed on the student’s approved graduate program plan. Students without adequate undergraduate background will be required to complete all or part of the program prerequisites. Students who do not select an area of concentration may choose elective courses with the approval of both the faculty adviser and the academic unit head.

Program Prerequisites (noncredit for this program)
MTH 1701 College Algebra
MGT 5000 Financial Accounting (or two undergraduate accounting courses)

Note: In addition, computer literacy is required as a prerequisite. It can be demonstrated by the applicant’s undergraduate coursework, passing a proficiency examination offered by the Extended Studies Division or by completing a suitable computer course.

Required Courses (9 courses)
MGT 5001 Managerial Accounting........................................... 3
MGT 5003 Public Finance......................................................... 3
MGT 5006 Introductory Managerial Statistics.............................. 3
MGT 5010 Seminar in Research Methodology............................ 3

MGT 5040 Public Program Policy and Evaluation*..................... 3
MGT 5132 Basic Economics.................................................... 3

Electives (3 courses)
Chosen to emphasize the area of greatest interest and benefit to the student........................................... 9
TOTAL CREDITS REQUIRED............................................. 36

*M.Serves as the capstone course for this program.

Students who do not select an area of concentration may choose electives from other graduate-level offerings in business, or other related disciplines, with the approval from both the faculty adviser and the cognizant academic unit head.

Materiel Acquisition Management, M.S.

Degree Awarded: Master of Science
Admission Status: graduate
Location: Fort Lee, Hampton Roads, National Capital Region, Northeast, Orlando, Redstone, Virtual Campus
Admission Materials: GMAT, GRE recommended

The goal of the Master of Science in Materiel Acquisition Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in materiel acquisition management.

Admission Requirements
The applicant to the Master of Science in Materiel Acquisition Management program must have a bachelor’s degree; however, the degree need not be in business administration. Students who are graduates from other fields are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive up to six hours of the program prerequisites in the program based on an evaluation of their undergraduate coursework. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The exact number of needed prerequisite courses depends on courses completed during the student’s undergraduate studies.

The GRE or the GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview of this catalog. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.
Degree Requirements

The degree of Master of Science in Materiel Acquisition Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student’s approved graduate program plan. Students without adequate undergraduate background will be required to complete all or part of the program prerequisites. Students may choose elective courses from several of the management or related academic disciplines by securing approval of both their faculty adviser and academic unit head.

Students with undergraduate credits for courses that they believe are equivalent to the program prerequisites should consult with their adviser concerning waiver of those prerequisites.

Program Prerequisites (noncredit for this program)
MGT 5000 Financial Accounting (or two undergraduate accounting courses)
MTH 1701 College Algebra

Note: In addition, computer literacy is required as a prerequisite. It can be demonstrated by the applicant’s undergraduate coursework, passing a proficiency examination offered by the Extended Studies Division or by completing a suitable computer course.

Required Courses (8 courses)
MGT 5001 Managerial Accounting .................................................. 3
MGT 5002 Corporate Finance .......................................................... 3
MGT 5006 Introductory Managerial Statistics ..................................... 3
MGT 5017 Program Management ..................................................... 3

MGT 5071 Decision Theory or ORP 5030 Decision Analysis ................ 3
MGT 5084 Materiel Acquisition Management* or MGT 5211
Procurement and Contract Management ......................................... 3
MGT 5132 Basic Economics ........................................................... 3

Electives (3 courses)
Chosen to emphasize the area of greatest interest and benefit to the student .......................................................... 9
TOTAL CREDITS REQUIRED ............................................................. 33

* Serves as the capstone course for this program.

Note 1: Electives may be taken with approval of both the faculty adviser and the program head from other graduate-level offerings in other colleges or academic units.

Note 2: Seminar in Research Methodology (MGT 5010) will be selected as one of the electives for all fully funded U.S. Army officers at the Fort Lee site.

Project Management, M.S.

The applicant to the Master of Science in Project Management degree program must have a bachelor’s degree; however, the degree need not be in business administration. Students who are graduates from other fields, especially mathematics, science and engineering, are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive up to 12 hours of the program prerequisites in the program based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The exact number of needed prerequisite courses depends on courses completed during the student’s undergraduate studies.

The GRE or GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview of this catalog. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

The goal of the Master of Science in Project Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in project management and identified concentration areas.

Degree Requirements

The degree of Master of Science in Project Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student’s approved graduate program plan. Students without adequate undergraduate background will be required to complete all or part of the program prerequisites. Students may choose elective courses from those listed below.

Students with undergraduate credits for courses that they believe are equivalent to the program prerequisites should consult with their adviser concerning waiver of those prerequisites.

Program Prerequisites (noncredit for this program)
MGT 5132 Basic Economics (or two undergraduate economics courses)

Note: In addition, computer literacy is required as a prerequisite. It can be demonstrated by the applicant’s undergraduate coursework, passing a proficiency examination offered by the Extended Studies Division or by completing a suitable computer course.

Required Courses (8 courses)
MGT 5006 Introductory Statistics ..................................................... 3

MGT 5131 Productivity Measurement and Improvement .................. 3

Electives (3 courses)
Students without a concentration area may select their three electives from any area of specialization approved by their faculty adviser .......................................................... 9
TOTAL CREDITS REQUIRED ............................................................. 33

* Serves as the capstone course for this program.

Project Management — Information Systems, M.S.

The applicant to the Master of Science in Project Management — Information Systems degree program must have a bachelor’s degree; however, the degree need not be in business administration. Students who are graduates from other fields, especially mathematics, science and engineering, are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive up to 12 hours of the program prerequisites in the program based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not
The applicant to the Master of Science in Project Management must have a bachelor's degree in a field that is relevant to project management and identified concentration areas. Students who are graduates from other fields, especially in operation research degree program must have a bachelor's degree in business administration and managerial economics or a minor in business and related subjects. The goal of the Master of Science in Project Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in project management and identified concentration areas.

**Degree Requirements**

The degree of Master of Science in Project Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student's approved graduate program plan. Students without adequate undergraduate background will be required to complete all or part of the program prerequisites. Students may choose elective courses from those listed below.

Students with undergraduate credits for courses that they believe are equivalent to the program prerequisites should consult with their adviser concerning waiver of those prerequisites.

**Program Prerequisites** (noncredit for this program)

MGT 5132 Basic Economics (or two undergraduate economics courses)

Note: In addition, computer literacy is required as a prerequisite. It can be demonstrated by the applicant's undergraduate coursework, passing a proficiency examination offered by the Extended Studies Division or by completing a suitable computer course.

**Project Management – Operations Research, M.S.**

Major Code: B359
Age Restriction: N
Delivery Mode: s: online, classroom, off-site
Admission Materials: GMAT, GRE recommended

The applicant to the Master of Science in Project Management – Operations Research degree program must have a bachelor's degree; however, the degree need not be in business administration. Students who are graduates from other fields, especially mathematics, science and engineering, are encouraged to apply.

Students with an undergraduate business degree or courses may be able to waive up to 12 hours of the program prerequisites in the program based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The exact number of needed prerequisite courses depends on courses completed during the student’s undergraduate studies.

The GRE or GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview of this catalog. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

The goal of the Master of Science in Project Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in project management and identified concentration areas.

**Degree Requirements**

The degree of Master of Science in Project Management is conferred upon students who have successfully completed 33 credit hours of graduate coursework plus other course requirements as listed on the student’s approved graduate program plan. *Serves as the capstone course for this program.
The program provides key courses that enable participants to refine their experience and prior academic background to provide a holistic focus on the philosophy and methodology of quality management.

Admission Requirements

The applicant to the Master of Science in Quality Management program must have a bachelor's degree. However, the degree need not be in business administration. Students who are graduates from other fields, especially mathematics, science and engineering, are encouraged to apply. Students with an undergraduate business degree or courses may be able to waive up to six hours of the program prerequisites in the program based on an evaluation of their undergraduate academic transcripts. Prerequisite courses are required of a student whose undergraduate major is outside the business area or who has not previously completed the courses in these prerequisite areas. The exact number of needed prerequisite courses depends on courses completed during the student's undergraduate studies.

The GRE or GMAT may be required for admission evaluation purposes. General admission requirements and the process for applying are discussed in the Academic Overview section. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

The goal of the Master of Science in Quality Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in quality management.

Space Systems, M.S.

The graduate space systems program provides its graduates with the knowledge and capability to perform in a wide variety of technical and managerial areas, in industry, academia, and government agencies involved in the space program. It is for the student who expects to plan, design, build, integrate, test, launch, operate or manage space systems, subsystems, launch vehicles, spacecraft, payloads or ground systems.

The program is offered at Florida Tech sites at NASA Kennedy Space Center and Rockledge in Florida.

The goal of the Master of Science in Space Systems is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in space systems.

Admission Requirements

Admission to the Master of Science in Space Systems program requires a bachelor's degree in a recognized field of engineering or physical science from an accredited curriculum. Coursework must have included mathematics through differential equations and at least one year of calculus-based physics. In the case of a marginal undergraduate record (GPA less than 3.0), letters of recommendation and results of recent GRE Tests, both General (verbal and quantitative) and Subject (engineering or physics) are required and could be deciding factors. Holders of the Professional Engineer license (or Engineering Intern status for those less than five years past the Baccalaureate) need not take the GRE Subject Test.

General admission requirements and the application process are discussed in the Academic Overview of this catalog. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

Degree Requirements

The degree of Master of Science in Space Systems is conferred upon students who have successfully completed 33 credit hours of core and elective courses as listed on the student’s graduate program plan. It includes 24 hours of required space systems courses and nine hours of elective courses. Additional prerequisite courses may be required depending on the applicant's undergraduate preparation. With written permission from the director of space systems graduate studies, a student may substitute six semester hours of thesis credits in place of six elective credit hours.

Space Systems Management, M.S.

**Major Code:** 8315  
**Degree Awarded:** Master of Science  
**Admission Status:** graduate, Extended Studies Division

**Delivery Mode/s:** online, classroom, off-site  
**Admission Materials:** GMAT, GRE recommended

This program meets the professional needs of technical graduates who are, or are looking forward to, assuming more managerial responsibility in some aspect of space systems and need to enhance both managerial and technical skills.

The program is offered at Florida Tech sites at NASA Kennedy Space Center and Rockledge in Florida.

The goal of the Master of Science in Space Systems Management is to prepare individuals for advanced leadership positions in the private, public and military sectors with specific skills and competencies in space systems management.

**Admission Requirements**

Admission to the Master of Science in Space Systems Management program requires a bachelor's degree in a recognized field of engineering or physical science from an accredited curriculum. Coursework must have included mathematics through differential equations and at least one year of calculus-based physics.

Proficiency at the undergraduate level in financial accounting and statistics is also required. In the case of a marginal undergraduate record (GPA less than 3.0), letters of recommendation and results of recent GRE Tests, both General (verbal and quantitative) and Subject (engineering or physics) are required and could be deciding factors. Holders of the Professional Engineer license (or engineering intern status for those less than five years past the bachelor's degree) need not take the GRE Subject Test. Individuals who do not meet the stated requirements for regular admission may petition to take graduate courses for credit as a continuing education applicant.

**Total Credits Required**

*Note 1: Four-person student teams compete to develop the best proposal to carry out a specific mission in response to a Request for Proposals issued by the instructor acting as the Source Selection Official. Each team member's grade is partially determined by the team's competitive standing.*

Note 2: Electives may be selected with the academic program chair's approval from the appropriate graduate-level offerings in the Extended Studies Division or other academic units (e.g., business, engineering, science).

**Directed Elective (1 course)**

Any other deviation requires specific approval of the program head.

GRADUATE CERTIFICATE PROGRAMS

Admission
Individuals seeking admission for purposes of attaining a graduate certificate, but not degree seeking, will be evaluated for admission using the same procedures as outlined for continuing education for credit students, with the written approval of the head of the academic site offering the program. Applicants must submit the requisite application for continuing education (Code: 0102), with fee payment made, and be certified by the approving official as being capable of performing to graduate course standards. Specific admission criteria include the following:

Applicants must have a bachelor's degree from a regionally accredited university.

An undergraduate GPA of at least 2.5 is generally sufficient for admission for a graduate certificate program. An undergraduate GPA that is less than 2.5 will require that the applicant provide a GMAT, GRE and/or special documentation including letters of reference, résumé, postbaccalaureate credits, certificates of training, etc., to be admitted by exception for a graduate certificate program.

Individuals currently enrolled in a graduate degree program may also qualify for award of a graduate certificate by making a formal request to the local site director, upon satisfaction of the requisite certificate curriculum.

Completion Requirements
All courses must be completed with a minimum grade of C. A minimum cumulative GPA of 3.0 will be required for certificate award. Students will be allowed to attempt seven courses to meet the GPA requirement. If the minimum GPA is not met after seven courses, and the student would like to continue, he/she may appeal to the dean.

Transfer Credit
A possible three semester hours of transfer credit will be allowed and is consistent with current university policy regarding transfer credit. The transfer course must be from a regionally accredited university or an approved military equivalent and must have an earned grade of B or better.

Current or past members of the Defense Acquisition, Technology and Logistics (AT&L) workforce, or contractor employees who have attained a minimum level of professional certification in at least one AT&L career area, may be eligible for as many as six hours of transfer credits to be applied toward a Florida Tech Graduate Certificate. Consult with a faculty adviser or academic unit head for further information about current transfer credit policies.

Second or Subsequent Graduate Certificate Awards
A second or subsequent graduate certificate program must consist of no less than three courses not previously used to earn a prior graduate certificate at Florida Tech. Up to two courses from any prior earned graduate certificate at Florida Tech may be applied toward the completion requirements for a second or subsequent graduate certificate award, provided the grade(s) earned was a B or better and the prior course(s) satisfies a required or elective requirement in the second or subsequent graduate certificate program.

Curriculum
An elective course may be substituted with the permission of the academic unit head.

Mission Statement and Overview
The mission of the College of Engineering is to pursue knowledge, truth and excellence in a student-centered academic community characterized by shared values, unity of purpose, diversity of opinion, mutual respect and social responsibility. The college is committed to discovering new knowledge through research, and to enhancing Florida Tech’s position as an independent educational institution with bachelor’s, master’s and doctoral degree programs.

The College of Engineering comprises seven departments and the School of Computing that administers the engineering and applied science programs listed on this page. The departments are chemical engineering, civil engineering, computer sciences, electrical and computer engineering, engineering systems, marine and environmental systems, and mechanical and aerospace engineering. The School of Computing houses the department of applied mathematics that teaches all undergraduate mathematics courses.

The College of Engineering supports several research centers and laboratories, including the Center for Remote Sensing, Wireless Center of Excellence, Center for Software Testing, Education and Research, and Wind and Hurricane Impacts Research Laboratory. These centers and laboratories serve to encourage collaborative research activities involving faculty and students from different programs within the college and across colleges. See “Research” in the Institution Overview section for more information about these and other research facilities.

Admission
Students who attend a community college for two years before transferring into the College of Engineering should comply with articulation agreements where they exist and refer to the list of “Recommended Courses to be Transferred.” This list is for general guidance only. The detailed curriculum plan for the desired program should be consulted for more specific guidance. If possible, the prospective student should review his/her community college curriculum periodically with an appropriate university faculty member. Some of the courses normally taken during the first two years of a program could be unavailable at some community colleges. As a result, it may take one or more semesters beyond the nominal two years following community college graduation to complete a specific bachelor’s degree program.

Most mathematics, physics, applied mechanics, computer programming and English courses at the first- and second-year levels are offered every semester. A transfer student can usually be registered for a full schedule of courses that are tailored to his or her immediate academic needs. Exceptions, when they occur, are usually the result of the student having completed all coursework in some disciplines, such as mathematics and the humanities, without having started coursework in other essential areas, such as physics or chemistry.

Students entering majors other than chemical engineering can complete their bachelor’s degree programs at Florida Tech within five semesters by transferring the courses indicated in the following list of “Recommended Courses to be Transferred.” Students majoring in other fields can also expect to graduate in comparable periods of time by transferring appropriate courses, as indicated by the program descriptions in this catalog. Additional transfer credits, such as dynamics or calculus-based electric circuit theory for engineering majors, or a second semester of chemistry for oceanography, environmental science or chemical engineering majors, could reduce the time and credit hours remaining for graduation. Before applying for admission, community college students are urged to contact the appropriate academic unit for assistance in transferring to Florida Tech.

Students transferring from Florida community colleges who meet the conditions established in the articulation agreement between Independent Colleges and Universities of Florida and the Florida State Board of Community Colleges can graduate by completing from 69 to 75 credit hours, depending on the field of study.

For general admission requirements for Florida Tech, see the Academic Overview section.

*Including laboratories

Selection of a Major

A student typically selects a major at the same time the application for admission is submitted. A faculty adviser affiliated with the major program is assigned prior to the start of classes. A student who prefers to postpone the selection of a major may initially enroll in the first-year nondegree General Engineering program described in this section. However, selection of a degree program should occur by the start of the sophomore year.

As long as the requirements for continued enrollment (see Academic Overview section) are met, students are permitted to remain in their selected major. A change of major can be initiated by the student, but is subject to the approval of the new academic department head. Students can generally change majors between any two closely related degree programs during the sophomore year or even during the early part of the junior year without greatly increasing the time needed to complete all degree requirements.

Course Loads

The normal course load taken by students in the College of Engineering is 17 credit hours. Students may enroll for lighter loads and are strongly encouraged to do so if difficulty is experienced in keeping up with all coursework when a full load is attempted, even though the duration of the program would of necessity be extended from eight semesters to nine or more semesters.

Fast Track Master’s Program for College of Engineering Honors Students

This program allows undergraduate students currently enrolled in the College of Engineering to complete a master’s degree program in one year by earning graduate-level credit hours during their senior year, and applying up to six credit hours to both the bachelor’s and master’s degrees. The program is available to undergraduates who have completed a minimum of 35 credit hours at Florida Tech with an earned GPA of at least 3.4, and who have completed at least 95 credit hours toward their undergraduate degree by the time the approved student begins taking graduate-level courses. The credit hours are treated as transfer credit (GPA does not apply) when applied toward the master’s degree. Interested students should consult their department head for more information about this program.

Interdisciplinary Programs

Biomedical Engineering

Biomedical engineering is the application of engineering principles to the understanding and solution of medical problems. As medical technology has rapidly developed over the past three decades, the demand for qualified biomedical engineers has dramatically increased. Today, biomedical engineers are actively involved in research and development work in all areas of medicine, including investigating the physiologic behavior of single cells, developing unique imaging modalities and designing implants using living and nonliving materials for the replacement of diseased or traumatized body tissues. The continued advancement of medical technology and the many unsolved problems in understanding, detecting and treating disease suggest that biomedical engineers will continue to play a very important role in the development and evaluation of medical care technology. The strategic vision for graduate programs in biomedical engineering at Florida Tech is to advance healthcare by integrating education, discovery, innovation and entrepreneurship through collaboration between practicing physicians and faculty, and by cultivating new translational research projects based on clinical practice needs. Opportunities are available to students to participate in clinical research projects conducted by medical doctors.

Currently the biomedical engineering program is available at the M.S. and Ph.D. levels in mechanical engineering, and at the M.S. level in chemical, electrical and computer engineering. Refer to the respective department listings for detailed information about the degree requirements and course offerings.

Nuclear Technology

With the current renaissance of nuclear power generation, and with up to 47 percent of the workforce eligible to retire in the next 10 years, the nuclear power industry faces a major challenge in engineering staffing needs to support both existing and new nuclear power plants. The nuclear industry requires highly qualified personnel who possess a sound and up-to-date understanding of the technical and professional practices that govern the safe and reliable operation of nuclear power plants and supporting facilities.

The nuclear technology area of emphasis is designed to educate engineers and scientists from a broad spectrum of disciplines offered at Florida Tech that will be needed to construct, operate, maintain and regulate nuclear power plants and associated facilities.

The nuclear technology emphasis allows undergraduate and graduate engineering and science students an opportunity to gain education in this field. Courses currently offered are listed under the MAE prefix in the Course Descriptions section. These courses cover the physical principles of nuclear reactors, nuclear reactor engineering, radiological engineering and nuclear criticality and reactor safety. A course in radiation and environmental protection is offered under the ENS prefix.

Systems Engineering

Systems engineering is defined by the International Council on Systems Engineering (INCOSE) as “an interdisciplinary approach and means to enable the realization of successful systems. It focuses on defining customer needs and required functionality early in the development cycle, documenting requirements and
then proceeding with design synthesis and system validation while considering the complete problem.”

This area of emphasis is designed to expose Florida Tech engineering and science students to the core aspects of systems engineering. Students interested in this area of emphasis can select from four courses listed under Department of Engineering Systems in this catalog.

Cooperative Education

Students in the College of Engineering are encouraged to participate in a cooperative education program. The Office of Career Management Services helps students participate in programs that alternate periods of work experience in a chosen field with academic semesters spent on campus as full-time students.

Participants in this program are able to earn some of the funds needed to further their education while gaining valuable, practical experience and a knowledge base that is useful in better defining career goals. The length of time needed to earn a degree is extended by an amount comparable to the number of semesters spent away from the campus. Students in these programs should pay special attention to scheduling their courses well in advance to avoid conflicts between off-campus periods and the semesters when required courses are offered.

NONDEGREE PROGRAM

General Engineering

College of Engineering
E.H. Kalajian, Ph.D., P.E., Associate Dean

A student who wishes to postpone the selection of a major may enroll for up to one year as a general engineering student, following the curriculum described below. This curriculum is designed to allow students more time to become familiar with all College of Engineering academic programs. Students are urged to select degree programs as early in the year as possible; those who take the courses listed below and no others for the entire freshman year may have up to 9 credit hours of coursework to make up later.

FALL CREDITS
ASC 1000 University Experience .............................................. 1
CHM 1101 General Chemistry 1 .................................................. 4
COM 1101 Composition and Rhetoric ....................................... 3
EGN 1000 Introduction to Engineering ..................................... 3
MTH 1001 Calculus 1 .............................................................. 4

SPRING

COM 1102 Writing about Literature ......................................... 3
CSE 1502 Introduction to Software Development with C++ or
CSE 1503 Introduction to Software Development with FORTRAN .............................................. 3
MTH 1002 Calculus 2 .............................................................. 4
PHY 1001 Physics 1 ................................................................. 4
PHY 2091 Physics Lab 1 ........................................................... 1

Students in this program are advised by the college’s associate dean of academic administration until a degree program is selected. Once 30 credit hours (not including remedial courses) have been successfully completed, the student is expected to select a degree program. Acceptance into the desired degree program is automatic unless the student has been academically dismissed.

UNDERGRADUATE DEGREE PROGRAM

Construction Management, B.S. 

Major Code: 7045 Degree Awarded: Bachelor of Science
Age Restriction: N Admission Status: undergraduate
Delivery Mode/s: classroom only Location/s: main campus

Program Chair
Ralph V. Locurcio, M.S., P.E.

Professors
Edward H. Kalajian, Ph.D., P.E., geotechnical engineering, foundations, stabilization of waste materials.
Ralph V. Locurcio, M.S., P.E., construction management, project management, quality management, engineering leadership, disaster recovery, urban engineering, urban infrastructure, industrial relations.

Associate Professor
Albert M. Bleakley, M.S., P.E., transportation engineering.

Adjunct Faculty
L.M. Monari, Ph.D.

Mission Statement
The construction management degree program at Florida Tech is administered by the College of Engineering and has been developed to provide a curriculum that meets the specific needs of the expanding construction industry in Florida and throughout the United States. The construction industry requires professionals who understand the basics of civil engineering coupled with a substantial understanding of business subjects such as project management, contracting, budgeting and cost control. This program has been designed with input from senior construction industry professionals who are members of the Construction Industry Advisory Board at Florida Tech. The curriculum meets Florida Tech’s core requirements, functions within the institutional framework established for all Florida Tech programs and is consistent with the institutional mission and assessment procedures of the university.

The main objective of the construction management program is to provide an education that will lead to a leadership role in the construction industry, while preparing students to become responsible members of society. The curriculum is responsive to current social, economic and technical developments in the field of construction, and reflects the application of evolving knowledge in construction and the behavioral and quantitative sciences. The program incorporates current and developing curricula that reflect evolving changes in construction technology and management trends, and the goals of the program closely reflect the needs of society and the construction profession.

Curriculum
The curriculum consists of 13 courses designed specifically for the construction industry and 31 existing courses, for a total of 44 courses and 127 credit hours of instruction. The program is designed to prepare students for immediate employment as construction management professionals, rather than as civil engineering design professionals.

The construction management degree program is designed to prepare students for professional careers and graduate school. During the first two years, the emphasis is on foundation courses in chemistry, mathematics, physics, engineering mechanics and business, augmented by practice-oriented civil engineering
courses. The introductory construction courses include field trips and introduce the various disciplines of engineering and business management employed in the construction industry. The CAD laboratory course uses the latest CAD software, provides knowledge that is applied in the rest of the curriculum and serves as the basis for understanding, interpreting and using construction plans and specifications in construction operations.

During the second and third years, emphasis is on specific technical courses designed to provide a working knowledge of civil, electrical and mechanical engineering methods used in the design of both horizontal and vertical projects and in construction practice. In addition, business and management courses are added to develop analytical skills needed for making business and technical decisions during construction operations. The technical and business courses in the third and fourth years emphasize leadership, teamwork, oral and written communication, and ethics. The fourth year focuses on the application of these skills to real-world problems with emphasis on societal impacts and the integration of all skills into a seamless and profitable project scenario.

During the senior year, students are required to be part of a multidisciplinary design project team that identifies, formulates and designs a real-world construction project. In this capstone course, students must assemble information from previous courses to enhance the application of their technical and management skills to accomplish project and societal goals. Mandatory electives in humanities and social sciences provide a broader understanding of the professional work environment, human history and culture. The curriculum provides flexibility in the form of restricted and technical/business electives that allow further depth and breadth in a discipline of choice.

**Degree Programs—College of Engineering** 95
DEPARTMENT OF CHEMICAL ENGINEERING
Manolis M. Tomadakis, Ph.D., Head (Interim)

Degree Programs
Chemical Engineering, B.S.
Chemical Engineering, M.S.
Area of Specialization:
Biomedical Engineering
Chemical Engineering, Ph.D.

Associate Professors
Paul A. Jennings, Ph.D., P.E., biological reactor engineering, membrane separation, waste recycling, alternative energy sources.

Manolis M. Tomadakis, Ph.D., transport processes (diffusion and conduction) in porous and composite media, numerical studies of NMR parameters, materials characterization through computer simulations, PEM fuel cell modeling.

Jonathan E. Whitlow, Ph.D., P.E., multivariable process control, adaptive control, process modeling and simulation, molten salt electrolysis, supercritical fluids.

Assistant Professors
James R. Brenner, Ph.D., advanced materials for hydrogen purification, fuel cells, gas sensing.

Maria E. Pozo deFernandez, Ph.D., diffusion in polymers, properties of polymer systems, thermodynamics, fluid phase equilibria at high pressures, supercritical fluids.

Adjunct Faculty
Ronald G. Barile, Ph.D., hydrogen and renewable energy technology, spacecraft systems.

J.J. Thomas, M.S., alternative fuels.

Mission Statement
In support of the mission of the university, the educational objectives of the chemical engineering department are to provide graduates with the technical skills necessary to pursue a successful career in chemical engineering, including appropriate knowledge of mathematics and basic sciences as well as basic principles of engineering science and design; to provide graduates with the communication skills necessary to pursue a successful career in chemical engineering, including those skills needed for both written and oral presentation of technical data; to provide graduates with an understanding of the non-technical skills required for a successful career in chemical engineering, including professional ethical responsibility, adaptation to changing technology and participation in interdisciplinary and intercultural teams.

UNDERGRADUATE DEGREE PROGRAM

Chemical Engineering, B.S.

Major Code: 7033
Degree Awarded: Bachelor of Science
Age Restriction: N
Admission Status: undergraduate
Delivery Mode/s: classroom only
Location/s: main campus

Chemical engineering is primarily the application of chemical principles to industrial processes and environmental problems to effect a change in the composition and properties of matter to benefit society and the environment. A graduate in chemical engineering has the basic training to solve problems in transport and separation processes, process dynamics and control, energy production, food and petrochemical processing, materials synthesis and processing, and chemical equipment and plant design.

The freshman and sophomore years emphasize basic mathematics, science and communication skills; the junior year, fundamentals of chemical engineering; and the senior year, integration of those fundamentals in capstone design courses. Elective coursework also allows students to broaden their knowledge in other technical fields, to deepen their understanding in an area of specialization, or to participate in a technical research project under the direction of an individual faculty member.

Admission Requirements
Students seeking admission should have one year of high school biology, chemistry and physics, in addition to at least three years of mathematics, including algebra, geometry and trigonometry.

Degree Requirements
A Bachelor of Science in Chemical Engineering requires a minimum of 135 credit hours as specified below. Because general chemistry and mathematics are critically important foundations for all chemical engineering courses, chemical engineering majors must pass CHM 1101, CHM 1102, MTH 1001 and MTH 1002 with grades of at least C before taking any 2000-level chemical engineering courses.

Students must successfully complete all courses listed for the Freshman year before registering for CHE 3101. Students must successfully complete all courses listed for the sophomore year before registering for CHE 4181.

</table>
A list of other recommended electives is available in the chemical engineering department office.

Areas of Emphasis
A wide variety of career paths are open to chemical engineering graduates. Many students, however, are interested in a specific area of chemical engineering and choose electives related to that area. The department office maintains lists of electives appropriate for students interested in alternative energy engineering, biochemical engineering, biomedical engineering, environmental engineering, materials science and engineering, nuclear technology, petroleum engineering, and systems engineering. Students may also select as electives courses required for graduate study in business, law or medicine.

Minors
It is the policy of the College of Engineering not to offer minors in areas of engineering. Students may elect, however, to pursue minors in other areas such as computational mathematics, biology, chemistry, or environmental science.

Five-Year Master's Degree Program
More than one-third of all chemical engineering graduates choose to continue their education beyond the bachelor's degree. A program has been developed within the department that allows students to complete a master's degree in one calendar year following completion of requirements for the bachelor's degree.

The program includes the opportunity to work with a departmental faculty member on an undergraduate research project that may be expanded into a master's thesis topic. To qualify, students must have earned a GPA of 3.0 or above following his or her junior year. Additional information concerning the program may be obtained by contacting the department head.

GRADUATE DEGREE PROGRAMS

Chemical Engineering, M.S.

The objective of the master of science program is to study the basic principles of chemical engineering in greater depth, including transport phenomena, thermodynamics, reactor design and process control. Electives in other areas to broaden the students' exposure are also required. The program's emphasis is research and the writing of a thesis on a current problem. The results of the thesis must be publishable in a technical journal. Students are advised to see members of the faculty to determine compatibility of interests before selecting a research area. Program policies are available in the program office.

Admission Requirements
The applicant must have a Bachelor of Science in Chemical Engineering or its equivalent. Applicants with degrees in other fields of engineering, or in science or mathematics, are ordinarily required to take preparatory undergraduate courses before starting the master of science program. These courses are established by the faculty adviser and the department head when the student obtains admission to the program.

General admission requirements and the application process are detailed in the Academic Overview section.

Degree Requirements
The Master of Science in Chemical Engineering requires satisfactory completion of 30 credit hours, including six credit hours of thesis, as shown below. Required courses include the zero-credit Chemical Engineering Seminar (CHE 5100) that all graduate students are required to register for and attend every semester. The 12 elective credits may be satisfied by taking chemical engineering graduate courses, or other courses approved by the graduate adviser. The degree also requires completion of an independent research project, the writing of a thesis and its successful defense.

Curriculum
Prior to the completion of nine credit hours of graduate study each student establishes an appropriate program of study with the guidance of a graduate committee, subject to final approval by the department head.

Degree Programs—College of Engineering 97
Areas of Specialization
The student may select electives and the thesis topic to provide an emphasis in any of the following areas that include environmental engineering, materials synthesis, processing and characterization; transport and separation processes; computer-aided modeling, processing and control or biomedical engineering.

Biomedical Engineering
Biomedical engineering applies engineering and science methodologies to the analysis of biological and physiological problems and the delivery of healthcare. The biomedical engineer serves as an interface between traditional engineering disciplines and living systems, and may focus on either, applying the patterns of living organisms to engineering design or engineering new approaches to human health. A biomedical engineer may use his/her knowledge of engineering to create new equipment or environments for such purposes as maximizing human performance or providing non-invasive diagnostic tools. Students can choose elective courses in their area of interest offered by other engineering disciplines.

The minimum requirements include those outlined above and 15 credit hours (five courses) as outlined below:

Required Courses
BIO 5210 Applied Physiology
BME 5702 Biomedical Applications in Physiology

Three courses from the following:
BME 5103 Transport Processes in Bioengineering
BME 5259 Medical Imaging
BME 5569 Biomaterials and Tissue Regeneration
BME 5710 Orthopedic Biomechanics
BME 5720 Biomedical Instrumentation

Chemical Engineering, Ph.D.

Major Code: 9033
Degree Awarded: Doctor of Philosophy
Age Restriction: N
Admission Status: graduate
Delivery Mode/s: classroom only
Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives

The doctoral program is primarily for students who wish to develop independent research or problem-solving and critical thinking abilities. Research areas must be related to the faculty’s interests.

Admission Requirements
General admission requirements and the application process are covered in the Academic Overview section.

Admission to the doctoral program normally requires the completion of a master’s degree in chemical engineering. However, students enrolled in the Florida Tech master’s program may apply to be admitted directly to the doctoral program after completing 18 credit hours with a cumulative grade point average of 3.5 or more, if there is evidence of the ability to pursue problems independently.

Doctoral applicants must demonstrate outstanding scholastic achievements and aptitude, provide letters of recommendation from previous professors, including the M.S. thesis adviser and provide results of a recent GRE test including both the General Test and Subject Test in Engineering.

Degree Requirements
The doctor of philosophy degree is recognition of one’s independent creative ability to research, delineate and solve novel, significant scientific and/or engineering problems. Results of such work must be publishable in refereed journals. Coursework is also included in support of these objectives.

Each student is expected to complete an approved program of study, pass both oral and written examinations, propose and complete an original research project, and write and defend a dissertation on the research work.

The Ph.D. in chemical engineering requires a minimum of 72 credit hours (42 credit hours after the completion of a master’s degree), including at least 18 credit hours of formal coursework in chemical engineering (six after the master’s degree) and six credit hours in mathematics, and satisfaction of the general doctoral degree requirements presented in the Academic Overview section. The written examination covers chemical engineering and related mathematical, physical and chemical sciences. The oral examination includes the presentation of a research proposition developed independently by the student to demonstrate ability to create and develop a research idea. The written and oral examinations are normally taken before the end of the fourth academic semester, counted from the semester of admission to the doctoral program. The dissertation may be theoretical, computational, experimental or a combination of the three in any of the areas of specialization shown for the master’s degree.

RESEARCH

Current research activities are within the scope of the areas of specialization previously stated.

Environmental engineering: Projects include development of a new bioreactor to produce micro-algae for applications in aquaculture and design of systems for controlling contaminants in spacecraft atmospheres. Most projects focus on development of renewable resources, especially alternative sources of energy.

Materials synthesis, processing and modeling: Ongoing activities are primarily in development of new membranes for hydrogen purification, including porous silicon and metal hydridetemplated porous carbon composites. Work is being done using molten salt electrolysis for metals production. Other activities include development of polymer/carbon composites for applications in gas sensing and modeling of transport properties in porous media.

Transport and separation processes: Current projects include development of computer simulation algorithms for estimating transport properties of porous and composite materials, especially fibrous media, and modeling transport and reaction in polymer electrolyte membrane fuel cells. Other recent projects have examined membrane separation of gases and the use of supercritical fluids for extraction of citrus oils.

Computer-aided modeling, processing and control: Research is ongoing in the area of adaptive control for both single loop and multivariable applications. Neural networks are being investigated for use in nonlinear control as well as other areas of model development in which traditional models are constrained. Modeling, analysis and simulation of chemical process for in situ resource use on the moon and Mars are also being conducted to aid NASA’s effort in space exploration. Other topics of research interest include using neural networks in nonlinear control and other areas of model development in which traditional models are constrained.
Department of Civil Engineering
Ashok Pandit, Ph.D., P.E., Head

Degree Programs

Civil Engineering, B.S.
Civil Engineering, M.S.

Areas of Specialization:
Construction Management
Environmental
Geo-Environmental
Geotechnical
Structures
Water Resources

Civil Engineering, Ph.D.

Professors
Paul J. Cosentino, Ph.D., P.E., pavement design and evaluation, transportation planning, containment of hazardous wastes, geotechnical engineering with emphasis on in situ testing and slope stability.
Edward H. Kalajian, Ph.D., P.E., geotechnical engineering, foundations, stabilization of waste materials.
Ralph V. Locurcio, M.S., P.E., construction management, project management, quality management, engineering leadership, disaster recovery, urban engineering, urban infrastructure, industrial relations.
Ashok Pandit, Ph.D., P.E., groundwater hydraulics and hydrology, numerical methods in subsurface modeling, hydraulic design, stormwater management.
Jean-Paul Pinelli, Ph.D., P.E., wind and earthquake engineering, risk analysis and risk modeling, wireless instrumentation.

Associate Professor
Howell H. Heck, Ph.D., P.E., solid waste management, degradable materials, determining the ultimate fate of chemicals in disposal facilities.

Adjunct Faculty
D.W. Fisher, J.D., P.E.; L.M. Monari, Ph.D.

Professor Emeritus
Jack W. Schwalbe, M.S.

Mission Statement
The mission of the civil engineering department is to provide state-of-the-art education in a caring and nurturing environment, helping students achieve their full potential. The educational objectives are to produce graduates who collaborate in teams and can independently appraise and conduct work-related projects to service their constituents; continuously seek professional growth; display ethical responsibility and leadership qualities; and who communicate effectively with their clients, constituents, peers, subordinates and supervisors.

Civil engineering extends across many technical specialties, such as construction, environmental, geological, structures, transportation and water resources, that interact with each other. The planning, designing and constructing of facilities and infrastructure systems used in public and private sectors are the responsibility of the civil engineer. Civil engineers work with architects and other engineers designing and constructing buildings, bridges, highways, aerospace facilities, ocean structures, ports and harbors, and utility facilities. Many civil engineers are involved in the solution and prevention of environmental problems and work on water resources management, soil and groundwater cleanup, and solid and hazardous waste management.

Some Florida Tech students select an environmental engineering emphasis to prepare for careers concerned with the treatment and distribution of water and water resources, as well as the management, treatment and reuse of wastewater, and soil remediation, groundwater cleanup and solid waste management.

Employment opportunities in civil engineering can be found in technical, administrative or commercial work with manufacturing, design, construction, transportation or power companies; with city, state or federal agencies; and with architectural and engineering firms.

Undergraduate Degree Programs

Civil Engineering, B.S.

Major Code: 7043
Degree Awarded: Bachelor of Science
Age Restriction: N
Delivery Mode/s: classroom only
Admission Status: undergraduate
Location/s: main campus

The civil engineering curriculum is designed to prepare students for professional careers and graduate school. During the first two years, emphasis is placed on foundation courses in chemistry, mathematics, physics and engineering mechanics, augmented by practice-oriented civil engineering courses. The introductory civil engineering courses include field trips and introduction to various disciplines of civil engineering. The CAD lab course, using the latest CAD software, provides knowledge that is applied in the rest of the curriculum, as do the engineering materials and construction measurement courses.

During the second and third years, emphasis is on courses in the main disciplines of civil engineering (construction, environmental/water resources, geotechnical, structures and transportation) that further develop analytical skills in preparation for design courses in the last two years. The emphasis in the third and fourth years is on design. The curriculum provides flexibility in the form of restricted electives and a technical/business elective that allow further depth in a discipline of choice, or further breadth.

Altogether, students are required to take five civil engineering laboratory courses to understand concepts and to learn, firsthand, what works and what does not. Each student is also required to be part of a multidisciplinary design project team that identifies, formulates and designs a real-world project. In this course, students must assemble information from previous courses. To enhance the application of their engineering skills to accomplish societal goals, technical courses in the third and fourth years incorporate leadership, teamwork, oral and written communication and ethics. Mandatory electives in the humanities and social sciences provide a broader understanding of the professional work environment, human history and culture.

Note: Restricted electives may be selected, with approval, from other upper-division courses in civil engineering or related fields.

*Approved Science Electives include Meteorology (OCN 2407), Environmental Geology (OCN 2602) and Atmospheric Environments (ENS 3101).

Environmental Engineering Emphasis

Students selecting the environmental engineering emphasis should select three of the following five courses as their restricted electives: CVE 3050, CVE 4035, CVE 4050, ENS 3101, OCN 3201.

GRADUATE DEGREE PROGRAMS

Civil Engineering, M.S.

Major Code: 3045
Age Restriction: N
Delivery Mode: classroom only
Admission Status: Master of Science
Location: main campus
Admission Materials: 2 letters of recommendation, objectives

The master of science program in civil engineering allows the engineer the opportunity to apply recent technological developments to the solution of current civil engineering problems. The objective of the program is to provide opportunities for the student's development of professional engineering competence and scholarly achievement. Construction management, environmental, geo-environmental, geotechnical, structures and water resources are the areas of major emphasis for graduate study. The program is structured so that the student will attain an academic mastery in one of the areas of study within civil engineering.

The Master of Science in Civil Engineering may be earned on either a full-time or part-time basis. A student may begin graduate studies in any semester except summer. Fewer scheduling problems will occur for those who begin in the fall semester. International students who wish to improve their English proficiency may choose to enroll in English language classes during the summer before beginning their graduate studies. Some graduate courses are offered in the evening to allow part-time students to complete the degree requirements.

Admission Requirements

An applicant should have a bachelor's degree in civil engineering. An applicant whose degree is in another field of engineering, or mathematics or the physical sciences, may be accepted but will be required to remedy any deficiencies by satisfactorily completing undergraduate courses in preparation for graduate study in civil engineering. Applicants must submit two letters of recommendation from academic references and a “statement of purpose” addressing reasons for graduate study in civil engineering. General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements

Civil engineering offers the master of science program with areas of specialization in construction, environmental, geo-environmental, geotechnical, structures and water resources. The master of science degree is conferred on students who have successfully completed a minimum of 30 credit hours in either a thesis or nonthesis program consisting of required and elective coursework. All graduate students on full or part assistantships (either teaching or research) are required to enroll in the thesis program. Students in the thesis program must successfully defend their theses, while students in the nonthesis program are required to pass final program examinations.

Curriculum

Thesis students enroll in 12 credit hours of required civil engineering courses (any of the following combinations of four specialization courses), six credit hours of thesis and 12 credit hours of elective courses. Nonthesis students enroll in 12 credit hours of required courses and 18 credit hours of elective courses. Three to six credit hours of elective courses should be in the areas of mathematics and/or operations research.
Construction Management
CVE 5035 Design Concepts in Urban Hydrology or

Water Resources
CVE 5035 Design Concepts in Urban Hydrology
CVE 5037 Numerical Groundwater Modeling
CVE 5039 Groundwater Hydrology and Contaminant Transport
ENS 5700 Introduction to Water Resources

Graduate elective courses in civil engineering and in other engineering disciplines are listed in the Course Descriptions section of the catalog and should be chosen in concert with the student’s adviser. Numerous elective courses for each area of specialization are available, as posted on our Web site at www.fit.edu.

Civil Engineering, Ph.D.

Major Code: 9043
Degree Awarded: Doctor of Philosophy
Age Restriction: N
Admission Materials: 3 letters of recommendation, résumé, objectives
Location/s: main campus

Admission Requirements
Admission to doctoral study is granted to a limited number of qualified applicants. The applicant will normally have received a bachelor’s or master’s degree from an accredited institution in a program that provides suitable preparation for doctoral-level studies in civil engineering. The applicant should have at least a 3.2 out of a possible 4.0 GPA for the most recently completed degree.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
The doctor of philosophy degree is awarded in recognition of scientific accomplishment and the ability to investigate engineering problems independently. The program consists of advanced studies to prepare the student for research and completion of a research project that leads to a significant contribution to the knowledge of a particular problem. Each student should pass the preliminary written and/or oral examination, complete an approved program of study, pass the comprehensive written and oral examination, complete a program of significant research, present the results of the research, and prepare and defend a dissertation concerning the research. A minimum of 24 credit hours of coursework, including a minimum of 12 credit hours of formal (graded) coursework and a minimum of 18 credit hours of dissertation beyond a master’s degree are required.

General degree requirements are presented in the Academic Overview section.

Curriculum
The doctoral program of study must be approved by the student’s advisory committee and the program chair. Considerable latitude is allowed in course selection provided at least 12 credit hours (beyond the master’s level) are selected from courses in civil or environmental engineering. The remaining courses are selected, again in collaboration with the advisory committee, according to the interests and research objectives of the student. Academic courses for the selected areas of specialization can be selected from course offerings in various academic units as follows:

Environmental/Water Resources: Courses may be selected from academic programs in civil, chemical, mechanical or ocean engineering, environmental science, oceanography, mathematics, operations research and computer science.

Geotechnical/Structures: Courses may be selected from academic programs in civil, aerospace, mechanical or ocean engineering, environmental science, oceanography, mathematics and computer science.

RESEARCH

Research activities of the faculty encompass the major areas of civil engineering. Current research projects in structures are in the areas of wind and seismic engineering, catastrophe risk modeling and wireless instrumentation development. Geotechnical research is concentrated in the areas of stabilization of waste materials for beneficial uses, in situ testing of soils, fiber-optic sensors in soils and evaluation of pavements. Research investigations in hydrology and water resources are related to development of new models and usage of existing models in the areas of numerical groundwater modeling, and design and performance of stormwater management systems. Model development is sometimes supplemented by field and laboratory experiments. Research activities in the environmental area include water treatment using reverse osmosis and activated carbon, biomass production, degradation of consumer products, landfill and compost simulation and solid wastes management.

Laboratories for research and instructional activities are available in the areas of materials and structures, soil mechanics, solid waste, unit operations and interactive graphics. Other campus laboratories can be used by students conducting graduate research. The materials and structures laboratory is equipped with several universal testing machines for physical testing, and equipment and instrumentation for experimental stress analysis. The soil mechanics laboratory contains commercial equipment for evaluating the engineering properties of soils. The solid-waste analysis laboratory is equipped to analyze solid wastes, to degrade solid wastes under both aerobic and anaerobic conditions, and to process solid wastes by a variety of methods.
Mission Statement

The mission of Florida Tech’s computer sciences department is to prepare computing professionals for success and leadership in the conception, design, implementation and operation of complex real-world systems, and to expand knowledge and understanding of computing through research, scholarship and service.

UNDERGRADUATE DEGREE PROGRAMS

Computer Science, B.S.

Major Code: 7071
Degree Awarded: Bachelor of Science
Age Restriction: N
Admission Status: undergraduate
Delivery Mode(s): classroom only
Location(s): main campus

Computers have led to significant quality of life improvements, and yet their potential is still to be fully realized. Computing professionals design and develop computer systems that are, insofar as possible, free from defects and protected from misuse that would harm the health or welfare of society or the environment.

The educational objectives of the bachelor of science degree program are to prepare students so that within a few years after graduation they will be well-respected computational problem solvers and recognized as algorithmic specialists contributing to the development of new technology and software products; they will be actively engaged in continual professional development; and will be using their technical knowledge, interpersonal and personal skills and professional attitude to advance their careers, the careers of others and the organizations for which they work.

The computer science curriculum at Florida Tech is a unique and well-rounded program that provides a solid technical background for careers in the computing profession or for graduate studies. Undergraduate students study the structure of typical computer systems, the techniques and theories supporting software development and specialized areas such as computer graphics, artificial intelligence, networks and information management. After graduation, they are equipped to enter the work force as systems analysts, application and system developers, or software specialists and are provided with the background necessary for graduate study.

Because the subject matter of programming, algorithms and data structures forms a critically important foundation for all advanced computer science courses, the minimum grade for satisfying the prerequisite requirements is a grade of C for each of the following courses: CSE 1001, CSE 1002 and CSE 2010.

Students must complete the following minimum course requirements:
The software engineering program prepares students for careers as practicing professionals in software architecture, design, implementation, testing and evolution, or for graduate study. The engineering of software is multidisciplinary, spanning computer science, engineering economics, engineering problem solving, epistemology, human factors management, mathematics, quality control and safety.

The educational objectives of the bachelor of science degree program are to prepare students so that within a few years after graduation they will be leaders in the development of software where their primary role may be in requirements elicitation, software design, application development, software testing or software evolution; actively engaged in continual professional development; and will be using their technical knowledge, interpersonal and personal skills and professional attitude to advance their careers, the careers of others and the organizations for which they work.

Candidates for a Bachelor of Science in Software Engineering must complete the minimum course requirements outlined in the following curriculum. Because the subject matter of programming, algorithms and data structures form a critically important foundation for all advanced computer science and software engineering courses, the minimum grade for satisfying the prerequisite requirements for these advanced courses is a grade of C for each of the following courses: CSE 1001, CSE 1002 and CSE 2010.

Note: This minor is not available to Department of Computer Sciences majors. A list of recommended elective courses is available from the department office. At least 12 credit hours used in the minor must be earned in the Florida Tech Department of Computer Sciences.

**GRADUATE DEGREE PROGRAMS**

**Computer Science, M.S.**

- Major Code: 6071
- Age Restriction: N
- Delivery Mode/s: classroom only
- Admission Materials: 3 letters of recommendation, GRE
- Degree Awarded: Master of Science
- Admission Status: graduate
- Location/s: main campus, Extended Studies Division

This program offers a student the opportunity to pursue advanced studies in various areas of computer science. The program is designed for students with bachelor’s degrees in computer science and provides a solid preparation for those who may pursue a doctorate. Master’s students are encouraged to concentrate their studies in research areas of interest to faculty in the department.

**Admission Requirements**

Applicants must have taken courses in differential and integral calculus, discrete mathematics, statistics and data structures and algorithms, as well as at least 12 semester credit hours of advanced coursework in undergraduate computer science. Admission may be granted with the stipulation that deficiencies are made up by taking the necessary extra courses. GRE scores (General Test only) are required. Students with English language deficiencies are only permitted to enroll in a restricted set of academic courses.

**Degree Requirements**

The Master of Science in Computer Science requires a minimum of 30 credit hours of approved graduate study. Students are encouraged to complete and successfully defend a thesis. Students who decide not to write a thesis must pass a final program examination.

**Summary of Degree Requirements**

*Take twice in any combination

**Core Courses (select three)**

- CSE 5210 Formal Languages and Automata Theory
- CSE 5211 Analysis of Algorithms
- CSE 5231 Computer Networks
- CSE 5251 Compiler Theory and Design
- CSE 5290 Artificial Intelligence

Elective courses are computer science or software engineering courses (CSE or SWE) numbered 5000 or above. Advanced elective courses are computer science (CSE) numbered 5600 or above and pre-approved SWE courses. All students must successfully complete at least 24 semester credit hours in computer science (CSE) or software engineering (SWE) courses.

The department excels in several specializations of computer science (computer security, computational intelligence, software testing). Students are encouraged to concentrate in a specialization by careful selection of elective courses.
Software Engineering, M.S.

Degree Awarded: Master of Science
Admission Status: graduate, main campus, Extended Studies Division
Location/s: main campus, Spaceport

The master of science in software engineering serves students who have earned a bachelor's degree in software engineering, computer science or a related discipline, as well as working software engineers who want to broaden their perspective while deepening their skills in software development. The program also accepts students who are already competent programmers wanting to prepare for careers in software engineering. Courses in this program are taught at a level that assumes that all students have a technical undergraduate degree and significant programming experience.

Admission Requirements
Applicants must have taken courses in differential and integral calculus, discrete mathematics, statistics and data structures and algorithms, as well as at least 12 credit hours of advanced coursework in undergraduate computer science. Admission may be granted with the stipulation that deficiencies are made up by taking necessary extra courses. GRE scores (General Test only) are recommended.

Degree Requirements
The Master of Science in Software Engineering requires a minimum of 30 credit hours of approved graduate study. Students are required to complete and successfully defend a thesis or pass a final program examination. The curriculum includes four required courses:

- SWE 5001 Software Engineering 1
- SWE 5002 Software Engineering 2
- SWE 5411 Software Testing 1
- SWE 5621 Software Metrics and Modeling

All students are required to register for Computer Science Seminar (CSE 5500) or Computer Sciences Internship (CSE 5501) twice during the degree program. The internship is completed with an information technology business or industrial organization and is available only for students without prior experience in a practical information technology setting.

Each student selects elective courses to fulfill their credit hour requirements. One elective must be selected from courses that require significant programming and another must be a fundamental course in computer science. A list of courses fulfilling these requirements is available from the department.

The department excels in several specializations of software engineering and students are encouraged to concentrate in one of these areas by careful selection of elective courses.

Software Testing

Software testing is the process of technical investigation of a software product, usually to discover quality-related information (such as defects or product state data) about the product. This subfield of software engineering is undergoing rapid change, demanding more technical knowledge and more insight into the product and its risks. Florida Tech offers unusual breadth and depth of coursework and research opportunities in software testing. A specialization in software testing is best suited for those who have already worked in the field and want to become leaders in the testing community, perhaps as consultants, test automation architects or managers. Software engineering students who do not have significant experience should plan to take at least one, and preferably two, internships.

Additionally, the student must either complete a thesis on a software-testing-related topic or must take two optional courses that address software test related issues.

Computer Science, Ph.D.

Degree Awarded: Doctor of Philosophy
Admission Status: graduate
Location/s: main campus

The doctoral program is designed to provide the highest level of academic scholarship and research in the disciplines of computer science. The goal is to produce qualified professionals for research and teaching positions in the academic world, as well as equivalent positions in industry and government.

The doctoral program in computer science is designed to attract students who have the greatest potential for expanding the frontiers of knowledge and transferring this knowledge to others. The program requires a significant breadth of understanding in the fundamentals of computer science, the mastery of several specialized subjects and the creativity to extend the body of knowledge on a particular subject through significant original research.

Admission Requirements
Each potential candidate must meet the general admission requirements and follow the process for applying presented in the Academic Overview section.

To qualify for admission to the doctoral program in computer science, a candidate must demonstrate the potential for success in this program. A student may do so by one of the following means:

1. Successful completion of a bachelor of science degree in computer science from an accredited institution, with a GPA of at least 3.5.
2. Successful completion of a master of science degree in computer science or a related field from another accredited institution, with a GPA of at least 3.5.

Also required are three letters from individuals familiar with the applicant's academic and research ability recommending doctoral study. Applicants are strongly encouraged to be aware of the research interests of faculty in the department. Scores from the GRE General Test are required, and the Subject Test in Computer Science is recommended.

Degree Requirements

The degree of doctor of philosophy is conferred in recognition of both breadth of scientific competence in computer science and technical research capabilities, as demonstrated by producing an acceptable dissertation. The required work consists of advanced studies in preparation for specialized research, and completion of an original research program resulting in a significant contribution to the body of knowledge in the subject investigated. Each student must qualify for admission, complete an approved program of study, pass a comprehensive examination, complete a program of significant original research and defend a dissertation concerning the research.
Each candidate is expected to publish major portions of the dissertation in refereed conferences and journals, and is strongly encouraged to teach while pursuing the degree. General degree requirements are presented in the Academic Overview section.

Curriculum
The Ph.D. in computer science requires at least 72 semester credit hours beyond the bachelor's degree, or 42 hours beyond an applicable master's degree, including at least 12 semester credit hour in formal courses numbered CSE 5600 or higher, or advanced courses in other disciplines chosen in concert with the student's academic adviser. Additional coursework must conform to graduate policy (Ph.D. Course Requirements, Ph.D. Credit Hour Requirements) and be designed to provide a foundation for computer science research. The minimum research and dissertation requirement is 18 semester credit hours or 24 hours if the student did not complete a master's thesis. All students are required to successfully complete any combination of Computer Science Seminar (CSE 5500) or Computer Sciences Internship (CSE 5501) four times and must satisfy the general doctoral degree requirements presented in the Academic Overview section.

During the first or second term, a doctoral student must prepare a program of study to be approved by the student's faculty adviser and department head. The program of study should be designed to fit the student's professional goals, the department's resources and the breadth of general computer science knowledge expected of all doctoral candidates. Each student is required to pass comprehensive examinations that cover breadth and depth within computer science. The breadth examination is administered by computer science faculty and normally must be passed before the end of two years after admission into the doctoral program. This examination includes topics from the foundations of computer science, computer systems, computer software and applied software. After completion of all coursework contained in the approved program of study, the student is required to pass a depth examination administered by his or her doctoral committee. After passing the depth examination, the student prepares a dissertation proposal representing the research plan to be followed. The dissertation research is carried out under close supervision of the student's doctoral adviser and committee. After completion of the research project and with the approval of the adviser, the dissertation is submitted to the doctoral committee for critical evaluation, followed by an oral defense of the dissertation.

RESEARCH

Computer sciences faculty members and students are conducting research in the following areas:

**Computational intelligence:** computer vision, constraint reasoning, data mining, machine learning, speech recognition, swarm intelligence, spatio-temporal multidimensional reasoning.

**Computational science:** bioinformatics, statistical computing.

**Computer security engineering:** cryptology, cryptography and cryptanalysis; secure software development and testing; malicious code, network security and intrusion detection.

**Distributed computing:** agents and coordination, Internet computing, negotiations, peer-to-peer networks.

**Human centered design:** cognitive engineering, advanced interaction media, complexity analysis in human-centered design, life-critical system, human-centered organization design and management, modeling and simulation.

**Languages:** functional language, internationalization, type systems.

**Software engineering:** software documentation, maintenance and evolution, reliability and testing.

Research facilities provide open access to a wide range of computing hardware, operating systems, software development applications and general purpose computing applications. Several research centers and laboratories support specialized research interests of faculty and students.

**Center for Computation and Intelligence (CCI):** The center studies how to make computers more intelligent as well as how intelligence can change the way we compute. Specifically, CCI investigates algorithms that can help computers learn (machine learning), listen (speech recognition), reason (constraint reasoning, spatio-temporal reasoning) and see (computer vision). Moreover, the center examines how distributed intelligent agents can interact (coordination, distributed constraint reasoning, cryptography). CCI also studies how simple animal behavior can provide a novel way to solve problems (swarm intelligence). Applications of techniques include computational biology, computer security, device monitoring, digital government, surveillance and Web personalization.

**Harris Institute for Assured Information:** The center is funded by both industry and government sponsors and concentrates on all aspects of computer hardware and software security. Faculty participants are internationally recognized for their technical contributions, especially in the areas of hardware and software security testing. License agreements in place with a number of industry leaders enable the implementation of research results in commercial quality hardware and software products, focusing on assuring the integrity of computer hardware and software applications from malicious intrusion. The center performs funded hardware and software testing, vulnerability testing, security assessments and basic research in computer security and software development testing (see “Research” in the Institution Overview section).

**Center for Software Testing, Education and Research:** One of the key barriers to effective testing in industry is weak education in the practical methods of software testing. The mission of the center is to create effective, grounded, timely materials to support the teaching and self-study of software testing, software reliability and quality-related software metrics. Examples of recent work can be found on the center's Web site at www.testingeducation.org (see “Research” in the Institution Overview section).

**Software Evolution Laboratory (SEL):** The primary mission of this laboratory is to advance the state-of-the-art in evolving complex software systems in a disciplined manner. This includes research related to legacy system re-engineering, reverse engineering, program understanding and software maintenance. The systems in question can be traditional software applications or Web-based applications. The secondary mission of the SEL is to advance the state-of-the-practice in software evolution by transitioning results
from the laboratory into widespread use through evidence-based arguments (such as empirical studies) that objectively support the efficacy of the techniques in question. Issues related to technology adoption are necessarily a part of this effort. An example of recent work is the investigation of the impact of test-driven development (TDD) techniques, such as Extreme Programming (XP), on long-term software maintenance costs.

DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

Samuel P. Kozaitis, Ph.D., Head

Degree Programs

Computer Engineering, B.S.
Computer Engineering, M.S.

Area of Specialization:
Biomedical Engineering
Computer Engineering, Ph.D.
Electrical Engineering, B.S.
Electrical Engineering, M.S.

Areas of Specialization:
Biomedical Engineering
Electromagnetics
Photonics
Systems and Information Processing
Wireless Systems and Technology

Electrical Engineering, Ph.D.

Professors

Barry G. Grossman, Ph.D., fiber-optic sensor systems and smart structures, fiber-optic communications.
John Hadjilogiou, Ph.D., P.E., switching theory, computer organization.
Fredric M. Ham, Ph.D., Harris Professor, digital signal processing, neural networks.
Samuel P. Kozaitis, Ph.D., automated feature extraction, image fusion.
Syed H. Murshid, Ph.D., photonics, fiber-optic sensors, acoustic and fiber-optic communications, power electronics, instrumentation.
Robert L. Sullivan, Ph.D., University Professor, power systems, power electronics.

Lynn E. Weaver, Ph.D., nuclear energy, control systems.

Associate Professors

Georgios C. Anagnostopoulos, Ph.D., machine learning, pattern recognition.
Susan K. Earles, Ph.D., semiconductor modeling, processing and fabrication, microelectronics, solid-state device physics.
Veton Z. Kepuska, Ph.D., human-machine interaction and communication, speech recognition.
Ivica Kostanic, Ph.D., telecommunications, wireless telecommunications.
Brian A. Lail, Ph.D., antenna-coupled sensors, computational and applied electromagnetics, EMI, EMC.

Assistant Professor

Stéphane Bucaille, Ph.D., free space optical communications, human-machine interfaces.

Adjunct Faculty

T.L. Crandell, Ph.D.; B.A. Myers, Ph.D.; T. Young, Ph.D.

Professors Emeriti

Student Coordinator

Cheryl Mitrovich

Mission Statement

The mission of the Department of Electrical and Computer Engineering is to prepare students to become successful professionals in a dynamic global environment. By fostering a desire for lifelong learning through a broad-based interdisciplinary core education, both electrical and computer engineering programs provide opportunities for undergraduate research that reflects the expanding world around us, and gives students the tools to advance the state-of-the-art in a chosen specialization area.

UNDERGRADUATE DEGREE PROGRAMS

Computer Engineering, B.S.

Major Code: 7042
Degree Awarded: Bachelor of Science
Age Restriction: N
Admission Status: undergraduate
Delivery Mode/s: classroom only
Location/s: main campus

The goal of the computer engineering program is to provide the student with a total learning experience. The program is designed to expose the entire spectrum of computer engineering concepts from the basic building blocks of transistors and gates, through the progression of embedded controllers, computer architectures and high-performance digital signal processors. Students develop an extensive knowledge of hardware, along with a strong education in programming techniques to provide them with a complete understanding of computer systems. In the senior year, they design, build and test computer systems as part of their senior design course.

The educational objectives for computer engineering are to create in our students the passion for engineering that will allow them to understand and correct the increasingly diverse problems facing modern society; to graduate quality engineers who are forward-thinking and equipped with the leadership skills needed to make tomorrow’s world a better place through their desire for lifelong learning; to provide our students with the broad-based interdisciplinary education that will allow them to excel in the global marketplace; to prepare our students for hands-on research for advancement and knowledge growth in their field; and to inculcate in our students the desire to better serve society’s needs, to search for better ways to solve the world’s problems and give them the tools to raise the standards of engineering worldwide.

A major component of the computer engineering program at Florida Tech involves hands-on learning. The computer engineering student begins taking computer engineering courses during the freshman year. The freshman-level courses include programming and interfacing an embedded microcontroller. Laboratory experience is integrated into most of our classes. In the junior year students are introduced to interfacing with a high-performance digital signal processor.

In computer engineering, a strong focus is on the mastery principle. It is assured that computer engineering students not only know the material critical to engineering, but also can demonstrate mastery of the material, which is the goal of everyone in the program.

During the freshman and sophomore years, students learn the basics of computer engineering along with college-level mathematics and physics. In addition, courses in computer design with hands-on laboratory experience are taken both terms of the freshman year. In these courses, students program and create an interface to an embedded microcontroller.
Throughout the sophomore and junior years, students learn basic analytical techniques of the engineer—ways in which the engineer views physical situations and uses mathematical techniques to design basic subsystems. Many of the courses taken by students at this level offer integrated laboratory experiences. In this way, students can visualize the practical aspects of the various theories they encounter.

During the senior year, students continue to build their knowledge base to develop a system approach to engineering design. Through electives that emphasize applications using digital signal processors, students may explore various topics within computer engineering for which they have developed specific interests.

**Degree Requirements**

Candidates for the Bachelor of Science in Computer Engineering must complete the minimum course requirements as outlined in the following full-time curriculum. Deviations from the recommended program may be made only with the approval of the student's adviser and concurrence of the department head, in accordance with the Accreditation Board for Engineering and Technology (ABET) criteria. Students may complete these requirements on a part-time basis.

Proficiency in certain key areas is of primary importance to success as computer engineers. For this reason, a student who receives a grade of D in any of the following courses is strongly urged to repeat the course to attain a grade of at least C: ECE 2111, ECE 2112, ECE 3111; MTH 1001, MTH 1002, MTH 2001, MTH 2201; PHY 1001, PHY 2002, PHY 2003.

Students must successfully complete a minimum of 90 percent of all the courses listed below under the freshman and sophomore years before they will be allowed to register for upper-level (3000/4000) courses.

Students who have completed 24 credit hours and have not passed COM 1101 will register for this course in the next available semester. Students who have completed 48 credit hours and have not passed COM 1102 will register for this course in the next available semester.

The engineering science elective is limited to courses that help develop an appreciation of other branches of engineering. Courses that are acceptable as humanities/social sciences electives are identified as such in the *Course Descriptions* section. Definitions of electives for engineering programs are presented in the *Academic Overview* section.

**TOTAL CREDITS REQUIRED** 132

*A list of approved Engineering Science Electives is available from the department.*

**Electrical Engineering, B.S.**

Major Code: 7041

Degree Awarded: Bachelor of Science

Age Restriction: N

Admission Status: undergraduate

Delivery Mode(s): classroom only

Location(s): main campus

The goal of the electrical engineering program is to provide the student with a total learning experience. It is designed to expose the entire spectrum of electrical engineering concepts from the basic building blocks of transistors and gates, through communications, control, electromagnetic, computer and photonic systems. Students develop an extensive knowledge of hardware, along with skills in software simulation and analysis. In the senior year, students design, build and test complete systems as part of their senior design course.
The educational objectives for electrical engineering are to create in our students the passion for engineering that will allow them to understand and correct the increasingly diverse problems facing modern society; to graduate quality engineers who are forward-thinking and equipped with the leadership skills needed to make tomorrow’s world a better place through their desire for lifelong learning; to provide our students with the broad-based interdisciplinary education that will allow them to excel in the global marketplace; to prepare our students for hands-on research for advancement and knowledge growth in their field; and to ingrain in our students the desire to better serve society’s needs, to search for better ways to solve the world’s problems and give them the tools to raise the standards of engineering worldwide.

A major component of the electrical engineering program at Florida Tech involves hands-on learning. The electrical engineering student begins taking electrical engineering courses during his/her freshman year. The freshman-level courses include programming and interfacing an embedded microcontroller. Laboratory experience and computer-based analysis are integrated into most classes and all laboratories.

In electrical engineering, a strong emphasis is on the mastery principle. It is assured that electrical engineering students not only know the material critical to engineering, but also can demonstrate mastery of the material, which is the goal of everyone in the program.

During the freshman and sophomore years, students learn the basics of electrical engineering along with college-level mathematics and physics. In addition, courses in computer design with hands-on lab experiences are taken both terms of the freshman year.

Throughout the sophomore and junior years, students learn the basic analytical techniques of engineering—ways in which the engineer views physical situations and uses mathematical techniques to design basic subsystems. Many of the courses taken by students at this level offer integrated lab experiences. In this way, students can visualize the practical aspects of various electronic theories they encounter.

During the senior year, students continue to build their knowledge base to develop a systems approach to engineering design. They gain a deeper knowledge in at least two specializations through combination lecture/lab courses, followed by advanced courses in related areas. Through electives, students may explore various topics within electrical engineering for which they have developed specific interests.

**Degree Requirements**

Candidates for the Bachelor of Science in Electrical Engineering must complete the minimum course requirements as outlined in the following full-time curriculum. Deviations from the recommended program may be made only with the approval of the student’s adviser and concurrence of the department head, in accordance with the Accreditation Board for Engineering and Technology (ABET) criteria. Students may complete these requirements on a part-time basis.

Proficiency in certain key areas is of primary importance to success as electrical engineers. For this reason, a student who receives a grade of D in any of the following courses is strongly urged to repeat the course to attain a grade of at least C: ECE 2111, ECE 2112, ECE 3111, ECE 3222, ECE 3442, MTH 1001, MTH 1002, MTH 2001, MTH 2201; PHY 1001, PHY 2002, PHY 2003.

Students must successfully complete a minimum of 90 percent of all the courses listed below under the freshman and sophomore years before being allowed to register for upper-level (3000/4000) courses.

Students who have completed 24 credit hours and have not passed COM 1101 will register for this course in the next available semester. Students who have completed 48 credit hours and have not passed COM 1102 will register for this course in the next available semester.

Courses that are acceptable as humanities/social science electives are identified as such in the Course Descriptions section. Definitions of electives for engineering programs are presented in the Academic Overview section.

Additional policies and procedures governing degree requirements may be found in the program’s student handbook and online in the learning management system (Angel).

The computer engineering program is committed to excellence in teaching, innovative and challenging research programs, and providing opportunities for the student's development of professional engineering competence and scholarly achievement. A commitment to innovative research stimuli an excellent teaching and research program that allows graduates to use imaginative solutions to engineering problems. The program offers opportunities for graduates to pursue positions in research, development and manufacturing for industry and government.

The curriculum is flexible to allow opportunities to design an education program that is suited to individual academic goals. Background is provided in a variety of topics, including computer architecture, signal and image processing, high-performance computing and telecommunications. Effective interaction between related topics is an important aspect of the program. Faculty are engaged in research of significance and regularly collaborate with prominent scientists and engineers from industry and government. The low student-faculty ratio fosters a close relationship between faculty and students.

The opportunities for graduate education and research in computer engineering are wide-ranging. Although specific research areas are listed in this section, there is a great deal of overlap in both technical content and faculty interest. As a result, there is considerable interaction among students and faculty across these areas, and a student may pursue studies that combine a variety of topics. Students with backgrounds in computer engineering may wish to inquire about study in the biomedical engineering option of the mechanical engineering master's degree program.

**Admission Requirements**

The applicant should have a bachelor of science degree from a computer or electrical engineering program accredited by ABET. In evaluating an international application, consideration is given to academic standards of the school attended and the type of undergraduate degree obtained. Applicants whose bachelor's degrees are in other engineering fields, mathematics or the physical sciences may be accepted, but they will be required to remedy any deficiencies by satisfactorily completing a number of undergraduate courses in preparation for graduate study in computer engineering.

**Degree Requirements**

The Master of Science in Computer Engineering requires a minimum of 30 approved credit hours chosen in accordance with a program plan arranged in consultation with the student's adviser and approved by the department head. Students who choose the thesis option may apply only six credit hours of research/thesis work toward their degree requirements. Students who choose the non-thesis option are encouraged to engage in faculty-supervised research through a special topics course and are required to pass the master's final program examination. The master's final program exam measures the student's understanding of the technical concentration area they have chosen and corresponds to the department's research areas.

**Curriculum**

To earn the master of science degree, the student must complete an approved program plan for a total of 30 credit hours. The program may follow the requirements below or the student may choose the biomedical engineering specialization.

At least five ECE 5000-level courses, including a minimum of three at the 55xx-level.

At least two, but not more than three, courses other than those with the ECE prefix, including one mathematics course at the 5000-level.

**Biomedical Engineering**

Biomedical engineering applies engineering and science methodologies to the analysis of biological and physiological problems and the delivery of healthcare. The biomedical engineer serves as an interface between traditional engineering disciplines and living systems, and may focus on either, applying the patterns of living organisms to engineering design or engineering new approaches to human health. A biomedical engineer may use his/her knowledge of engineering to create new equipment or environments for such purposes as maximizing human performance or providing non-invasive diagnostic tools. Students can choose elective courses in their area of interest offered by other engineering disciplines.

The minimum program requirements include six credit hours of thesis (ECE 5999) and the following:

**Required Courses**

BIO 5210 Applied Physiology
BME 5702 Biomedical Applications in Physiology

Three courses from the following:

BME 5103 Transport Processes in Bioengineering
BME 5259 Medical Imaging
BME 5569 Biomaterials and Tissue Regeneration
BME 5710 Orthopedic Biomechanics
BME 5720 Biomedical Instrumentation

Three additional courses selected in consultation with the student’s adviser.

**Program for Graduates from Other Fields**

A student admitted to this program is expected to have a bachelor's degree from a regionally accredited institution or the equivalent, with an undergraduate major in an engineering discipline, mathematics or the physical sciences, and an academic and/or professional record indicating a high probability of success in graduate work. Preparatory courses required to provide a student with the background necessary for successful graduate study in computer engineering.
engineering are listed below. Depending on the individual’s background, other courses (e.g., differential equations and linear algebra) may also be required. Proficiency in these areas may be demonstrated by either successful course completion or by passing an equivalency examination. When possible, a student will be notified of deficiencies at the time of acceptance. In addition to the preparatory work described, all degree requirements listed above for the master of science degree must be fulfilled.

ECE 1552 Computer Design
ECE 2112 Circuit Theory 2
ECE 2551 Software/Hardware Design
ECE 3111 Electronics
ECE 4112 Digital Electronics

**Electrical Engineering, M.S.**

The master of science program can be taken on either a full-time or part-time basis. A two-year projection of course offerings is available on request. Course offerings are arranged to permit the master’s program to be completed in three semesters for full-time students and in two calendar years for part-time students.

**Admission Requirements**

The undergraduate backgrounds of applicants for admission to the master’s degree programs vary considerably. An applicant from a U.S. school should have a bachelor of science or equivalent degree from an electrical engineering program accredited by ABET. In evaluating an international application, consideration is given to academic standards of the school attended and the content of the courses leading to the degree obtained.

Applicants whose bachelor’s degrees are in other engineering fields, mathematics or the physical sciences may be accepted, but will be required to remedy any deficiencies by satisfactorily completing a number of undergraduate courses in preparation for graduate study in electrical engineering. Students with backgrounds in electrical engineering may wish to inquire about study in the biomedical engineering option of the mechanical engineering master’s degree program.

**Degree Requirements**

The Master of Science in Electrical Engineering is offered with both thesis and nonthesis degree paths. Each requires a minimum of 30 credit hours of approved graduate study; however, course choices vary considerably depending on the student’s area of interest. Prior to the completion of nine credit hours, a student must submit for approval a master’s degree program plan to indicate the path chosen and the specific courses to be taken. Up to six credit hours of thesis may be included in the 30-credit-hour requirement. A nonthesis candidate must pass the master’s final program examination. The master’s final program exam measures the student’s understanding of the technical concentration area they have chosen and corresponds to the department research areas.

**Curriculum**

To earn the master of science degree, the student must complete an approved program plan for a total of 30 credit hours. The program may be tailored to a specific area of study or it may follow the requirements for one of the available specialization areas.

**Biomedical Engineering**

Biomedical engineering applies engineering and science methodologies to the analysis of biological and physiological problems and the delivery of healthcare. The biomedical engineer serves as an interface between traditional engineering disciplines and living systems, and may focus on either, applying the patterns of living organisms to engineering design or engineering new approaches to human health. A biomedical engineer may use his/her knowledge of engineering to create new equipment or environments for such purposes as maximizing human performance or providing non-invasive diagnostic tools. Students can choose elective courses in their area of interest offered by other engineering disciplines.

The minimum program requirements include six credit hours of thesis (ECE 5999) and the following:

**Required Courses**

| BIO 5210 Applied Physiology |
| BME 5702 Biomedical Applications in Physiology |

**Three courses from the following:**

| BME 5103 Transport Proccesses in Biengineering |
| BME 5259 Medical Imaging |
| BME 5569 Biomaterials and Tissue Regeneration |
| BME 5710 Orthopedic Biomechanics |
| BME 5720 Biomedical Instrumentation |

Three additional courses selected in consultation with the student’s adviser.

**Electromagnetics**

This area of specialization provides a background in applied and computational electromagnetics. Students develop analytical and computational tools needed to understand and solve complex field interactions including antennas and radiating structures, radar, field and wave propagation, scattering and interaction with materials. The curriculum requirements are provided as follows:

- ECE 5410 Electrodynamics 1................................. 3
- ECE 5425 Antennas 1.................................... 3
- ECE 5431 Computational Electromagnetics.................. 3

Approved electives (may include 6 credit hours of thesis) .................................................. 21

TOTAL CREDITS REQUIRED........................................... 30

**Photonics**

Recent advances in optical communications and sensing have been largely due to the development of photonic devices and systems. This specialization is oriented to both devices and systems encompassing a wide range of areas including fiber-optic communication and sensing, lasers and laser system applications, and optical computing and signal processing. The study and research of these advanced devices and systems comprise the direction of this program.

Students are highly recommended to take the following three introductory courses:

- ECE 5301 Semiconductor Device Theory........................ 3
- ECE 5350 Optical Electronics..................................... 3
- ECE 5351 Optical Communication Systems........................ 3

Approved electives (may include 6 credit hours of thesis) .................................................. 21

TOTAL CREDITS REQUIRED........................................... 30

**Recommended Electives**

- ECE 5311 Microelectronics Fabrication Laboratory
- ECE 5333 Analog IC Design
- ECE 5352 Fiber-optic Sensor Systems
- ECE 5354 Acoustooptics and Electromic Devices
- ECE 5355 Electrooptics Laboratory
- ECE 5356 Optical Waveguides and Devices
Systems and Information Processing

Within this area of specialization, courses are selected to allow concentrations in areas that include systems, digital signal and image processing, neural networks and controls. Each student plans a program of study with a member of faculty whose professional field is related to student’s interest.

The curriculum requirements for this area are provided as follows:

ECE 5201 Linear Systems 1 .................................................. 3
ECE 5234 Communication Theory or ECE 5223 Digital Communications .................................................. 3
ECE 5245 Digital Signal Processing 1 .................................. 3
MTH 5425 Theory of Stochastic Signals .................................. 3
Approved Electives (may include 6 credit hours of thesis) .................................................................................. 15
TOTAL CREDITS REQUIRED .................................................. 30

Wireless Systems and Technology

This area is focused on technologies surrounding wireless communication. It covers a wide range of topics both on the system level and the component level. On the system level, some of the studied areas include 2G and 3G cellular communication systems, wireless sensor networks, radars systems, smart antenna and MIMO communication systems, multimedia communication, radars, WLAN and WiMAX. On the component level, this specialization covers topics in electronics, electromagnetics and antenna design. Additionally, enabling signal processing, linear system theory and radio propagation topics are covered.

The curriculum requirements are separated into two parts as follows:

All courses from the core curriculum list .................................. 15
Approved electives (may include 6 credit hours of thesis) .......... 15
TOTAL CREDITS REQUIRED .................................................. 30

Core Curriculum

ECE 5111 Radio Frequency Propagation
ECE 5201 Linear Systems
ECE 5234 Communication Theory
ECE 5245 Digital Signal Processing 1
MTH 5425 Theory of Stochastic Signals

Recommended Electives

ECE 5113 Wireless Local Area Networks
ECE 5115 Modern Wireless System Design
ECE 5117 Multimedia Communications
ECE 5118 Wireless Sensor Systems
ECE 5221 Personal Communication Systems
ECE 5223 Digital Communications
ECE 5238 Error Control Coding
ECE 5246 Digital Signal Processing 2
ECE 5248 Advanced Filtering
ECE 5251 Radar Systems
ECE 5333 Analog IC design
ECE 5418 Field Theory of Guided Waves
ECE 5425 Antennas 1
ECE 5426 Antennas 2
ECE 5450 Automated RF Measurements
ECE 5451 Microwave Circuit Design

With the approval of the student's adviser, other 5000-level courses may be added to the list of the approved electives.

Program for Graduates from Other Fields

A student admitted to this program is expected to have a bachelor's degree from a regionally accredited institution or the equivalent, with an undergraduate major in an engineering discipline, mathematics or the physical sciences, and an academic and/or professional record indicating a high probability of success in graduate work. Preparatory courses may be required to provide a student with the background necessary for successful graduate study. Depending on the individual's background, other courses (e.g., differential equations and linear algebra) may also be required. Proficiency in these areas may be demonstrated by either successful course completion or by passing an equivalency examination. When possible, a student will be notified of deficiencies at the time of acceptance. In addition to the preparatory work described, all degree requirements listed above must be fulfilled.

Computer Engineering, Ph.D.

Major Code: 9040
Age Restriction: N
Delivery Mode(s): classroom only
Admission Materials: 3 letters of recommendation, résumé, objectives

Admission Requirements

Admission to doctoral study is granted to a limited number of applicants who have received master's degrees in computer engineering from accredited institutions or from international institutions that provide suitable preparation for doctoral-level studies.

The doctoral program in computer engineering can be completed with a minimum of 48 credit hours beyond the master's degree; however, typically 48 to 54 credit hours are necessary. A list of elective courses is available on request.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements

The Doctor of Philosophy in Computer Engineering is conferred primarily in recognition of creative accomplishment and ability to investigate engineering problems independently, rather than for completion of a definite course of study. The work should consist of advanced studies and research leading to new knowledge and significant contribution to a chosen research area. In addition, to demonstrate the achievement of new knowledge in the field, a publication in a professional journal of conference proceedings is required.

General degree requirements are presented under the Academic Overview section.

Course Work and Dissertation Summary

Doctoral coursework minimum beyond the master's degree ........... 24
Doctoral research and dissertation ........................................ 24
TOTAL MINIMUM BEYOND THE MASTER'S DEGREE ............... 48

Curriculum

A minimum of 24 credit hours of coursework beyond the master's degree and at least 24 credit hours of Dissertation Research (ECE 6999) are required.

The student's adviser and the department head must approve a program of study. A wide degree of latitude is allowed in course selection and research interest within the capability of the university and the student's academic background. This requirement is imposed at the discretion of the doctoral committee.
After admission to doctoral candidacy, a yearly seminar demonstrating progress must be presented to the graduate faculty.

**Electrical Engineering, Ph.D.**

**Major Code:** 9042  
**Degree Awarded:** Doctor of Philosophy  
**Age Restriction:** N  
**Delivery Mode/s:** classroom only  
**Location/s:** main campus  
**Admission Status:** graduate  
**Admission Materials:** 3 letters of recommendation, résumé, objectives

The doctor of philosophy degree is offered to students who want to pursue advanced research in an area of existing faculty expertise. The doctoral degree is granted in recognition of high achievement in a program of study, required examinations and original research in the field of electrical engineering.

**Admission Requirements**

Admission to doctoral study is granted to applicants who have received master’s degrees in electrical engineering or related fields from accredited institutions or from international institutions that provide suitable preparation for doctoral-level studies.

Included with the application should be a short, clear statement of the applicant’s interests and objectives. An on-campus interview is highly recommended, although not required for admission.

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**

The degree of doctor of philosophy is conferred primarily in recognition of creative accomplishment and ability to investigate scientific or engineering problems independently, rather than for completion of a definite course of study. The work will consist of advanced studies and research leading to a significant contribution to a chosen research area.

The doctoral program in electrical engineering may be completed with a minimum of 48 credit hours beyond the master’s degree. Each student must complete an approved program of study beyond that required for a master’s degree, pass a comprehensive written examination, complete a program of significant original research, and prepare and defend a dissertation concerning the research. In addition, to demonstrate the achievement of new knowledge in the field, a publication in a professional journal of conference proceedings is required.

General degree requirements are presented in the Academic Overview section.

**Course Work and Dissertation Summary**

- Doctoral coursework minimum beyond master’s degree: 24
- Doctoral research and dissertation: 24
- TOTAL MINIMUM BEYOND THE MASTER’S DEGREE: 48

**Curriculum**

A minimum of 24 credit hours of coursework and at least 24 credit hours of Dissertation Research (ECE 6999) beyond a master’s degree are required. Up to nine credit hours outside of electrical and computer engineering can be counted toward the degree.

The student's adviser and the department head must approve a program of study. A wide degree of latitude is allowed in course selection and research interest within the capability of the university and the student’s academic background. This requirement is imposed at the discretion of the doctoral committee.

After admission to doctoral candidacy, a yearly seminar demonstrating progress must be presented to the graduate faculty.

**RESEARCH**

Current areas of research include image processing, electromagnetics, computer vision, neural networks, speech processing, wireless communications and pattern recognition. These activities are being carried out in relation to the following general areas of research interest.

**Electromagnetics:** Applied and computational research is conducted in order to manipulate electromagnetic fields. Antennas, frequency selective surfaces, high impedance ground planes, and bandgap structures are designed and analyzed using computational tools, then tested for validation. The ability to model electromagnetic properties of complex structures requires full-wave analysis with finite element, method of moments or finite difference techniques. RF measurements are conducted in the antenna laboratory that houses an anechoic chamber and screen room.

**Image processing:** Much of the research is directed at basic problems and contributes to the solution of major national problems in vision and image processing. These include automated object detection and perception, computer imaging, modeling and other areas of image analysis. Techniques being used include traditional techniques and others that include wavelets, fractals, higher-order statistics and morphology. Application areas include autonomous inspection in manufacturing and other commercial uses. Projects include the fusion of infrared and visible imagery, and denoising of imagery using advanced methods. In addition, many of the techniques in image processing are being applied to speech processing.

**Lightwave and Optronics Laboratory:** Research includes unique fiber-optic devices and techniques using modal multiplexing, allowing communications channels to operate with expanded bit rates and optical encryption and switching devices. Fiber-optic sensors are developed for 2-D and 3-D structural health monitoring of strain and material failure; environmental parameters such as temperature, pressure, magnetic field, ammonia, pH and salinity; and other sensors, such as level sensors for cryogenic, combustible and corrosive liquids, hydrogen leak detection and intrusion detection sensors for homeland security applications. Instrumentation includes tunable lasers, optical spectrum analyzers, optical power meters, bit error rate test sets, fiber amplifiers and digitally controlled attenuators, fiber-optic transmitters and receivers, optical time domain reflectometers, fiber splicers and customized data processing systems for data acquisition and signal processing. The work is also used for the design, development and analysis of nano-junction-based electronic and photonic devices.

**Microelectronics Laboratory:** See the Institution Overview section.

**Signal processing:** Research is performed in neural networks, image processing, pattern recognition and speech processing. Algorithms have been developed for near-real-time detection and classification for several applications such as communications, noise reduction, and speaker identification. Techniques being used include traditional techniques and others that include wavelets, fractals, higher-order statistics and morphology. Projects include the analysis and classification of infrasound signals, development of pattern recognizers, denoising of imagery and speech identification.
Curriculum

The master of science degree program includes all courses in the required course list and five elective courses as outlined below. Students should not register for any course outside the College of Engineering or main campus before submitting an approved program plan signed by both their adviser and department head. Newly admitted students in the program should have program plans approved by their designated adviser and department head before registering for any course to be applied toward graduation requirements. Students applying for a second graduate degree should submit their complete change of major form and program plan at least two semesters before graduation and no later than four weeks after starting their program. Only graduate courses in engineering, physical science or mathematics may be counted as transfer credit from the first degree.

Required Courses
ENM 5100 Quality Engineering ......................................................... 3
ENM 5200 Project Engineering .......................................................... 3
ENM 5310 Topics in Systems Engineering ....................................... 3
ENM 5350 Topics in Engineering Modeling and Design ................. 3
SYS 5385 System Life Cycle Cost Estimation .................................. 3

Elective Courses
Five elective courses are required, including at least three graduate-level courses that are purely technical in nature and taken from any program within the College of Aeronautics, College of Engineering or College of Science. Non-technical courses will not be accepted. A maximum of two courses may be taken from other colleges with the approval of the adviser and department head.

Systems Engineering, M.S.

Major Code: 8097 Degree Awarded: Master of Science
Age Restriction: N Admission Status: graduate
Delivery Mode/s: blended online, classroom Location/s: main campus
Required Admission Materials: 2 letters of recommendation, résumé, objectives, GRE

Today, an engineer or scientist who joins the workforce in the public or private sector, especially in the high-tech realm, is faced with the challenge of integrating design and development work with the work of other inter-company or intra-company groups. Courses taught in the systems engineering curriculum prepare the engineer to meet this system design and integration challenge with emphasis on technical as well as cost and schedule requirements.

The master of science program in systems engineering meets the systems engineering and system integration needs of a student who has an undergraduate degree in engineering, physical science, computing or mathematics. It draws on expertise and experience in these multidisciplinary areas, preparing the engineering or science graduate in such key advanced subjects as modeling and analysis, systems engineering principles, computer networks, digital communications, software testing, decision and risk analysis, human-machine interface and operations research.

A key aspect of the program, and an alternative to completing a thesis, is the team-oriented capstone design project course (SYS 5380), in which the team formulates and solves an industry problem and submits a project team paper. All nonthesis students are required to take this course in the graduating semester.

An applicant for admission must have earned a bachelor's degree in engineering, physical science, computing or mathematics. An applicant whose undergraduate GPA is less than 3.0 on a 4.0 scale may be asked to submit two letters of recommendation, a statement of objectives, a résumé and GRE results.

General admission requirements and the process of applying are discussed in the Academic Overview section.

Curriculum

The Master of Science in System Engineering degree program consists of taking courses consistent with the criteria as outlined under degree requirements. Students should not register for any course outside the College of Engineering or main campus before submitting an approved program plan signed by both their adviser and department head. Newly admitted students in the program should have program plans approved by their designated adviser and department head before registering for any course to be applied toward graduation requirements. Students applying for a second graduate degree should submit their completed change of major form and program plan at least two semesters before graduation and no later than four weeks after starting their program. Only graduate courses in engineering, physical science or mathematics may be counted as transfer credit from the first degree.

Degree Requirements

A minimum of 30 credit hours is required for graduation, including all courses on the following list of required courses and at least three courses from the list of elective courses. Thesis students must also earn six credit hours of thesis (SYS 5999). Nonthesis students must take two additional courses from the electives list, including SYS 5380. Thesis topics may be selected from the fields of computer science, electrical engineering, systems engineering or other suitable areas. The electives list below is partial, as courses from other disciplines continue to be added. The student should check with his or her adviser about additional elective courses.

Today, an engineer or scientist who joins the workforce in the public or private sector, especially in the high-tech realm, is faced with the challenge of integrating design and development work with the work of other inter-company or intra-company groups. Courses taught in the systems engineering curriculum prepare the engineer to meet this system design and integration challenge with emphasis on technical as well as cost and schedule requirements.

The master of science program in systems engineering meets the systems engineering and system integration needs of a student who has an undergraduate degree in engineering, physical science, computing or mathematics. SYS 5460 Systems Requirements Analysis .................................. 3

*Required for nonthesis students during the graduating semester.
Graduate Certificate in Enterprise Architecture

The emerging field of enterprise architecture (EA) has become an important area of learning for corporations and high-technology corporations. EA deals not only with product performance and application, but also information technology, information processing, customers and suppliers, and financial aspects within a corporation.

Applicants must have a bachelor’s degree in engineering, physical science, computing or mathematics from an accredited university. Applicants with degrees in other fields will be considered on a case-by-case basis.

To receive the certificate, students must complete four graduate-level courses as listed below. Students who successfully complete the four-course sequence to receive the certificate will be able to move seamlessly into the Florida Tech master’s degree program in either systems engineering or engineering management, if desired.

Required Courses
- SYS 5420 System Architecture Fundamentals
- SYS 5430 Enterprise Architecture Integration and Implementation
- SYS 5440 Enterprise Architecture Project Planning, Management and Documentation
- SYS 5450 Service-oriented Architecture Concepts and Theory

The Ph.D. program in systems engineering is designed to provide advanced education and research opportunities to qualified students with master’s degrees. On completion, the program prepares students to conduct independent scholarly work, teach in academia or pursue advanced research careers in government, commercial or private sectors.

Admission Requirements

Admission to doctoral study is granted to applicants who have received master’s degrees in systems engineering, engineering, physical science, computer science or mathematics from an accredited institution or from an international institution that provides suitable preparation for doctoral-level studies.

The applicant must have a master’s degree GPA of at least 3.50 on a 4.0 scale. International applicants must submit TOEFL scores of 600 or higher in addition to the GPA requirement. All students are required to have a GRE score of 1100 or higher.

Included with the application should be undergraduate and graduate transcripts, TOEFL scores (if required), GRE scores, three letters of recommendation, objectives, GRE consent of the major adviser. The adviser may require the student to take additional courses (beyond the total of eight courses) if it is felt these courses are needed for research preparation.

Core Courses
- SYS 5310 Systems Engineering Principles
- SYS 5350 Systems Modeling and Analysis
- SYS 5365 Decisions and Risk Analysis
- SYS 5370 Research Methods in Systems Engineering
- SYS 5385 System Life Cycle Cost Estimation

Degree Requirements

The Ph.D. in systems engineering requires a minimum of 48 semester credit hours beyond the master’s degree including 24 semester credit hours of doctoral-level coursework and 24 semester credit hours of dissertation research.

Course Work and Dissertation Summary

Doctoral coursework minimum beyond master’s degree ...................... 24
Doctoral research and dissertation ..................................................... 24
TOTAL MINIMUM BEYOND THE MASTER’S DEGREE ................... 48

In addition to the 24 semester credit hours of coursework, the major adviser may require additional courses to better prepare the student for conducting research in the selected topic.

Each student must have a completed and approved program plan within one month of acceptance into the program. Following successful completion of the courses in the plan, the student must pass the comprehensive examination, prepare a written dissertation proposal and defend that proposal to a committee formed according to graduate policy. Finally, the student must conduct the necessary research to prepare a written dissertation satisfying the elements agreed to by the student’s doctoral committee and defend that dissertation before the committee.

A candidate should have at least one journal paper in review before the dissertation defense, and have completed one conference paper and presented their results at a recognized conference.

General degree requirements are presented in the Academic Overview section.

Curriculum

The program of study must be approved by the student’s doctoral committee and the department head. All prerequisite coursework must be completed before beginning doctoral coursework. There are no exceptions to this policy.

Required Courses
- SYS 6010 Advanced Topics in Decision and Risk Analysis
- SYS 6020 Advanced Topics in Systems Modeling and Analysis
- SYS 6030 Advanced Topics in Process Engineering
- SYS 6040 Seminar in Systems Engineering

Elective Courses

In consultation with the major adviser, the student selects four courses applicable to the program from within the College of Engineering or College of Science. Latitude is permitted with the consent of the major adviser. The adviser may require the student to take additional courses (beyond the total of eight courses) if it is felt these courses are needed for research preparation.

Research

Research topics in systems engineering are interdisciplinary in nature. The student may select a topic from his/her engineering field with the acceptance of the major adviser and the committee. Topics include, but are not limited to, system design and modeling; simulation and analytical modeling; decision and risk modeling; design of experiments; statistical modeling; and systems life cycle cost estimation.
Wireless Center of Excellence (WiCE): See the Institution Overview section. Research within WiCE focuses on areas related to wireless communication, wireless multimedia communications and wireless sensor systems. Students are involved in research projects evaluating propagation of radio waves, planning and optimization of voice and data services in cellular systems, various aspects associated with wireless sensor networks and topics addressing challenges in providing multimedia communication over wireless links. WiCE is well connected with several industry partners that help in selection of relevant research topics and provide the center with state-of-the-art design tools and CAD software. In recent years the center has been involved in the hurricane research program sponsored by the National Science Foundation.

DEPARTMENT OF ENGINEERING SYSTEMS
Muzaffar A. Shaikh, Ph.D., Head

Degree Programs
Engineering Management, M.S.
Systems Engineering, M.S., Ph.D.
Graduate Certificate in Enterprise Architecture

Professors
William W. Arrasmith, Ph.D., systems engineering, signal processing
Muzaffar A. Shaikh, Ph.D., management science, decision modeling, mathematical programming, management information systems, systems engineering, operations research.

Assistant Professors
Luis D. Otero, Ph.D., systems design and analysis, industrial systems engineering
Adrian M. Peter, Ph.D., systems engineering, statistical data analysis, machine learning, image analysis.
Barry Webster, Ph.D., systems engineering, software engineering.

Adjunct Faculty
James G. Collins, Ph.D., systems engineering, computer security technology.
Kenneth Gibbs, Ph.D., computer networks.
R.W. Welch, Ph.D., statistics.

Mission Statement
The mission of the department of engineering systems is to prepare engineers and scientists for leadership roles in business organizations. Our educational objectives are to achieve steady enrollment growth and pursue practical funded research; to provide engineers and scientists the skills to expand their areas of responsibility in the workplace; and to update the skills of engineers and scientists in their fields of specialization.

Undergraduate Area of Emphasis in Systems Engineering
This area of emphasis is designed to expose interested undergraduate engineering students to core aspects of systems engineering. Juniors and seniors within the College of Engineering can select any three from the four courses listed below and have them applied as electives:
SYS 4100 Quality Engineering
SYS 4200 Project Engineering
SYS 4310 Systems Engineering Principles
SYS 4460 Systems Requirements Analysis

Undergraduate students in the Fast Track Master’s Program for College of Engineering Honors Students can take up to two of the courses under the graduate-level number (listed below). In this case, requirements for the fast track program apply. As a general rule, fast track students may apply up to six credits to both the undergraduate and graduate degree.

ENM 5100 Quality Engineering
SYS 5200 Project Engineering
SYS 5310 Systems Engineering Principles
SYS 5460 Systems Requirements Analysis

If a student who is not in the fast track program applies the credit to the undergraduate degree, the credit may not be applied to the graduate degree as well. Nor may students take the same course as both an undergraduate and a graduate. If the student later enters a systems engineering or engineering master’s degree program and has already taken the undergraduate version of the course, the department will grant a waiver and substitute another course in its place.

GRADUATE DEGREE PROGRAMS

Engineering Management, M.S.

Major Code: 8075
Age Restriction: N
Degree Awarded: Master of Science
Admission Status: graduate,
Delivery Mode/s: blended online, classroom
Location/s: main campus, Extended Studies Division
Admission Materials: 2 letters of recommendation, résumé, objectives, GRE

The Master of Science in Engineering Management meets the professional needs of the engineer who, although working in a technical field, finds it necessary to update his or her skills in engineering, as well as acquire knowledge in the management of engineering. Typically, the technical person finds that as he or she advances in the chosen field, the challenges of management increase as part of the overall responsibilities of the position. Many find that their careers would best be served by a program addressing both areas of their job responsibilities. This interdisciplinary program is designed for those individuals.

Admission Requirements
An applicant for the master’s program in engineering management should have a bachelor’s degree from an ABET-accredited engineering program. Applicants with bachelor’s degrees in physical sciences, computer science and mathematics will also be considered. In evaluating an international application, consideration is given to the academic standards of the school attended and the content of the courses. Letters of recommendation and a statement of educational objectives reflecting the applicant’s professional experience and career goals are encouraged. Applicants should also take the GRE.

General admission requirements and the process for applying are discussed in the Academic Overview section.

Degree Requirements
The Master of Science in Engineering Management requires a minimum of 30 credits hours. Courses taken to satisfy admission prerequisites cannot be counted towards the degree requirements. Students without adequate undergraduate courses in calculus, statistics, linear algebra, differential equations and physics will be required to make up these deficiencies. Applicants whose bachelor’s degrees are not in engineering will also be required to remedy any additional deficiencies by satisfactorily completing a number of undergraduate courses selected to meet the prerequisites for graduate study in their engineering area of specialization. GRE scores are required for these applicants.
The student must demonstrate originality and a significant, unique and meaningful contribution to the field of systems engineering. The research must be accurately and completely documented, explained and thoroughly supported in the dissertation and must be defended successfully to the committee as part of the degree requirement.

DEPARTMENT OF MARINE AND ENVIRONMENTAL SYSTEMS
George A. Maul, Ph.D., Head

Associate Head
John G. Windsor Jr., Ph.D.

Degree Programs
Earth Remote Sensing, M.S.
Environmental Resource Management, M.S.
Environmental Science, B.S., M.S., Ph.D.
Meteorology, B.S., M.S.
Ocean Engineering, B.S.
Ocean Engineering, M.S.

Areas of Specialization:
\begin{itemize}
  \item Aquaculture Engineering
  \item Coastal Engineering and Processes
  \item Hydrographic Engineering
  \item Materials and Structures
  \item Naval Architecture
  \item Ocean Energy
  \item Ocean Instrumentation
  \item Ocean Systems/Underwater Technology
\end{itemize}

Ocean Engineering, Ph.D.
Oceanography, B.S.
Oceanography
  \begin{itemize}
    \item Biological Oceanography, M.S.
    \item Chemical Oceanography, M.S.
    \item Coastal Zone Management, M.S.
    \item Geological Oceanography, M.S.
    \item Physical Oceanography, M.S.
  \end{itemize}
Oceanography, Ph.D.

Undergraduate Minor Programs
Environmental Science
Meteorology
Oceanography

Professors
Thomas V. Belanger, Ph.D., environmental planning, freshwater ecology, chemistry and biology of natural waters, wastewater treatment, water resources.
George A. Maul, Ph.D., marine meteorology, climate and sea level change, maritime natural hazards, physical oceanography, remote sensing
Geoffrey W.J. Swain, Ph.D., materials, corrosion, biofouling, offshore technology, ship operations.
John H. Trefry, Ph.D., trace metal geochemistry and pollution, geochemistry of rivers, global chemical cycles.
John G. Windsor Jr., Ph.D., environmental chemistry, pollution, trace organic analysis of air, water, soil, sediment and tissue, gas chromatography, mass spectrometry, environmental education.
Gary A. Zarillo, Ph.D., sediment transport technology, coastal and estuarine sedimentation, barrier island and tidal inlet processes.

Associate Professors
Charles R. Bostater Jr., Ph.D., environmental modeling, remote sensing, estuarine particle dynamics, water quality instrumentation, environmental optics, environmental geophysical fluid dynamics, physical oceanography.
Sen Chiao, Ph.D., mesoscale dynamics and modeling, remote sensing, hurricanes, boundary layer and mountain meteorology, convective parameterization.
Kevin B. Johnson, Ph.D., water column ecology, planktonic grazing and distributions, predator-prey interactions.
Steven M. Lazarus, Ph.D., analysis of planetary boundary layer, development and testing of life cycle models, parameterization of thin mid-level stratus/stratocumulus clouds, atmospheric radiation measurement.
Prasanta K. Sahoo, Ph.D., naval architecture, numerical modeling, wave resistance.

Assistant Professors
Steven M. Jachec, Ph.D., P.E., environmental fluid mechanics, coastal processes and engineering, numerical simulations of environmental flows, turbulence modeling.
Stephen L. Wood, Ph.D., P.E., underwater robotics, underwater vehicles, advanced navigation, control systems and ocean energy systems.

Adjunct Faculty
A.M. Clark, Ph.D.; C.L. Combs, M.S.; D.E. De Freeze, Ph.D.;
M. Sillit, M.S.; E.D. Thosteson, Ph.D., P.E.; R.W. Virnstein, Ph.D.

Professors Emeriti
Iver W. Duedall, Ph.D.; Dean R. Norris, Ph.D.; John C. Sainsbury, Ph.D.;
Andrew Zborowski, Ph.D.

Mission Statement
The mission of the department of marine and environmental systems is to integrate oceanography, ocean engineering, environmental science, meteorology, earth remote sensing and related academic concentrations into interdisciplinary knowledge-based optimal solutions to vital contemporary issues through education, research and service.

Directions in the department tend to mirror the interdisciplinary nature of the interests and expertise of a closely related multidisciplinary faculty in oceanography, meteorology, earth remote sensing, ocean engineering and environmental sciences, with each program offering bachelor’s, master’s and doctoral degrees.

The spectrum of research in marine and environmental systems ranges from using the scientific method to understand particular phenomena to a more applied approach developing solutions to specific problems. The understanding of problems and a vision of alternative solutions are manifested in research and engineering design of systems or components with direct benefit to human quality of life.

UNDERGRADUATE DEGREE PROGRAMS

Environmental Science, B.S.

Major Code: 7222
Age Restriction: N
Delivery Mode/c: classroom only
Program Chair
John G. Windsor Jr., Ph.D.

The environmental sciences are those areas of applied science concerned with the relationship between human activities and the supporting environment; they provide the scientific framework for rational environmental decisions.
Environmental sciences offerings at Florida Tech include two programs, both solidly based on coursework in chemistry, mathematics and physics, combined with specialized environmental science courses and courses in either biology or meteorology, as well as the humanities. Technical electives during the junior and senior years allow flexibility to meet individual interests while building a strong foundation in the environmental sciences. Theoretical concepts are reinforced by laboratory programs and multidisciplinary field studies.

The undergraduate environmental science program is designed to provide graduates with opportunities to pursue careers and advanced academic studies in the use, control and preservation of environmental resources and the enhancement of the quality of life. Graduates have a strong background in biological, chemical and physical sciences, coupled with basic and applied environmental science field, laboratory and coursework to help develop solutions to current and future environmental problems. Needs exist throughout the private sector and in local, state and federal agencies for the talents and expertise developed by graduates of this program.

Candidates for a bachelor's degree in environmental science complete a minimum program of 132 credit hours as outlined below. Elective course options from other programs enable the student to either broaden the scope of coverage of the curriculum or to develop a concentration of courses in some specific area of interest. For example, the curriculum can be designed to emphasize biological, chemical or remote sensing studies. The curriculum was developed to give students the solid, well-rounded background necessary to meet the needs of the numerous career opportunities available to graduates.

Meteorology is a joint program between the College of Engineering, College of Science and College of Aeronautics, administered by the environmental sciences program. A related degree program in aviation meteorology is offered by the College of Aeronautics. Candidates for a bachelor's degree in meteorology complete a minimum of 132 credit hours as outlined below. A student completing at least 24 credit hours including MET 3401, MET 3402, MET 4233, MET 4305, MET 4306, MET 5036, MTH 4308, and six credit hours from among AVS 3201, ENS 3101, MET 4310 and OCN 3401, is eligible to be certified as a professional meteorologist by the American Meteorological Society and the U.S. Office of Personnel Management, and is thus qualified for entry into positions in NOAA National Weather Service, NASA and the U.S. Armed Forces.

**TOTAL CREDITS REQUIRED.......................... 132**

*Science (including aviation science), engineering or business courses, subject to the approval of the environmental sciences program chair before registering.
Graduates will be instilled with the knowledge of chemistry, calculus-based physics, advanced mathematics, engineering sciences, humanities, social sciences, information technology and experimental methodologies.

**Educational Objectives**

The ocean engineering program offers education that is unique among engineering disciplines in providing an intimate and practical knowledge of the environment in which the graduate will operate. The result is a diverse curriculum with a strong foundation in all relevant engineering fields as well as in oceanography. The educational objectives of the program are:

**Academic fundamentals:** Graduates will have sufficient mastery of the academic fundamentals that underpin a successful career related to ocean engineering. These fundamentals include knowledge of chemistry, calculus-based physics, advanced mathematics, engineering sciences, humanities, social sciences, information technology and experimental methodologies.

**Engineering practice:** Graduates will have sufficient competence in the application of engineering skills for the practical solution of problems related to the ocean engineering profession. These skills include systematic problem formulations, techniques for their solutions, and methodologies for designing systems in the main stems of Florida Tech ocean engineering: coastal processes, hydrographic surveying and corrosion in the marine environment. In addition to these studies, various scientific investigations in the bioenvironmental, chemical, physical and geological oceanographic fields incorporate ocean engineering expertise.

**Teamwork and communication:** Graduates will possess confidence and ability to work both independently and as productive members of a team. Graduates are to attain a mastery of technical communication, and practice the interpersonal and organizational skills required to work effectively in multidisciplinary teams.

**Professional development:** Graduates will be instilled with the desire to contribute to the profession and to society on a continuing basis. They are encouraged to pursue various options consistent with lifelong learning, maintain ethical professional conduct, have knowledge of contemporary issues, participate in professional organizations and contribute to diversity in the community.

The first two years of study are devoted to developing a foundation in mathematics, physics, chemistry, mechanics, computer programming and humanities. During the junior year, the student acquires knowledge of ocean science and the basics of engineering analysis. The fourth year is oriented toward the application of these basic techniques to ocean engineering problems. All students are
required to obtain firsthand field and sea experience during the marine field projects held during the summer between the junior and senior years. These projects encourage the student to learn to analyze, design, construct, install and operate equipment in the marine environment for a particular designated task. The university operates several small boats and charters a well-equipped vessel for offshore, estuarine and river work.

Degree Requirements

Candidates for a Bachelor of Science in Ocean Engineering must complete the minimum course requirements outlined in the following curriculum.

For definition of electives for engineering programs, see the Academic Overview section.

- OCE 4531 Instrumentation Design and Measurement Analysis
- OCE 4542 Ocean Engineering System Design
- OCE 4563 Port and Harbor Design
- OCE 4573 Ship Design
- OCE 4575 Design of High-Speed Small Craft

Note: Lists of recommended elective courses are available from the department office.

Oceanography, B.S.

*Major Code: 7080

**Degree Awarded:** Bachelor of Science
**Age Restriction:** N
**Admission Status:** undergraduate
**Delivery Mode/s:** classroom only
**Location/s:** main campus

**Program Chair**
John G. Windsor Jr., Ph.D.

The Department of Marine and Environmental Systems integrates the expertise and skills of ocean scientists, engineers and managers. The oceanography faculty includes highly qualified individuals devoted to research involving the study of ocean currents and waves, coastal processes, planktonic and benthic organisms, marine meteorology, hydroacoustic applications, and trace-metal pollution identification and distribution. How these research efforts impact the deep-sea, coastal and estuarine environment is the subject of numerous publications and technical reports, which have been prepared by both faculty and students.

Much of the instructional work on estuarine and coastal waters is conducted as part of applied research contracts that use the program’s small motor-powered skiffs and chartered vessels for river, estuarine and offshore work. Access to the ocean is through Port Canaveral and/or Sebastian Inlet; the Gulf Stream can be reached in about three hours. These routes to the sea also provide convenient access to the Bahamas and the Florida Keys.

The program leading to the Bachelor of Science in Oceanography combines classroom and laboratory work at the main campus in Melbourne with the analysis of oceanographic data collected by students using program research vessels and boats.

During the first two years, the student concentrates on building a strong foundation in biology, chemistry, mathematics, physics and the humanities. The student can then choose one of five concentrations: biological, chemical or physical oceanography, coastal zone management or marine environmental science. Transferring from
one concentration to another during the first two years will incur little or no loss of academic credits. In all concentrations, emphasis is placed on a strong scientific background for the student so that he or she is prepared for more advanced studies in graduate school or employment by industry or government. The program promotes the concept of applied research through a summer Marine Field Project. Both programs are conducted under the direction of faculty members and are designed to help the student use previous academic coursework in a relevant manner. The marine studies/oceanography undergraduate curricula are designed to prepare the graduate for a professional scientific career and graduate studies, exploring the scientific implications of human activities in and near the oceans.

Oceanography offers five program concentrations:

**Biological Oceanography:** Provides training in all areas of oceanography with emphasis on biological aspects. Advanced courses in biology supplement those in oceanography.

**Chemical Oceanography:** Includes practical training in marine and environmental chemistry. Advanced courses in chemistry supplement those in oceanography.

**Coastal Zone Management (CZM):** Provides training in all areas of oceanography, while providing knowledge of decision-making and management concepts.

**Marine Environmental Science:** Offers a flexible curriculum that can be tailored to meet specific educational/professional goals within the broad field of marine science.

**Physical Oceanography:** The most quantitative concentration, it includes advanced courses in mathematics and engineering as well as oceanography.

Students interested in environmental sciences should also see “Environmental Sciences” in this section.

**Degree Programs—College of Engineering**
Minors in environmental science, meteorology and oceanography are offered through the department. A minor in sustainability is available through the Department of Biological Sciences. A complete policy statement regarding minors can be found in the "Academic Overview" section. Information about current minor offerings is available through the individual colleges/departments.

**Environmental Science** (19 credit hours)

- Minor Code: 6222
- Degree Awarded: none
- Age Restriction: N
- Admission Status: undergraduate
- Delivery Mode/s: classroom only
- Location/s: main campus

  ENS 1001 The Whole Earth Course  3
  ENS 3101 Atmospheric Environments  3
  ENS 4004 Aquatic Environmental Toxicology  3
  ENS 4010 Geographical Information Systems  3
  ENS 4300 Renewable Energy and the Environment  3
  ENS 4700 Environmental Hydrology  3
  ENS 4800 Limnology  3
  ENS 4901 Special Topics in Environmental Science  3

Note: Students must choose 19 credit hours from the list above. All courses are three credit hours, with the exception of Special Topics in Environmental Science (ENS 4901), which is one credit hour.

**Meteorology** (19 credit hours)

- Minor Code: 6224
- Degree Awarded: none
- Age Restriction: N
- Admission Status: undergraduate
- Delivery Mode/s: classroom only
- Location/s: main campus

  ENS 1001 The Whole Earth Course  3
  MET 1999 Weather Briefing  3
  MET 3401 Synoptic Meteorology  1
  MET 3402 Synoptic Meteorology  2
  MET 4305 Dynamic Meteorology  1
  MET 4306 Dynamic Meteorology  2
  MET 4310 Climatology  3
  OCN 2407 Meteorology  3
  OCN 3430 Fundamentals of Geophysical Fluids  3
  OCN 4405 Dynamic Oceanography  3
  OCN 4996 Internship or Technical Elective  3

Note: Students must choose 19 credit hours from the list above. All courses are three credit hours, with the exception of Weather Briefing (MET 1999), which is one credit hour.

**Oceanography** (19 credit hours)

- Minor Code: 6080
- Degree Awarded: none
- Age Restriction: N
- Admission Status: undergraduate
- Delivery Mode/s: classroom only
- Location/s: main campus

  OCN 1010 Oceanography  3
  OCN 2602 Environmental Geology  3
  OCN 3401 Physical Oceanography  3
  OCN 3411 Physical Oceanography Lab  1

One or more of the following:

- OCN 3101 Biological Oceanography  3
- OCN 3201 Marine and Environmental Chemistry  3
- OCN 3301 Geological Oceanography  3

Remaining credit hours from the following:

- OCN 2407 Meteorology  3
- OCN 3111 Biological Oceanography Lab  1
- OCN 3211 Marine and Environmental Chemistry Lab  1
- OCN 3311 Geological Oceanography Lab  1
- OCN 3430 Fundamentals of Geophysical Fluids  3
- OCN 4102 Marine and Estuarine Phytoplankton  3
- OCN 4103 Marine and Estuarine Zooplankton  3
- OCN 4104 Marine and Estuarine Benthos  3
- OCN 4106 Mitigation and Restoration of Coastal Systems  3
- OCN 4204 Marine and Environmental Pollution  3
- OCN 4704 Remote Sensing for Oceanography  3

Note: All courses listed are three credit hours with the exception of lab courses, which are one credit hour.

**GRADUATE DEGREE PROGRAMS**

**Earth Remote Sensing, M.S.**

- Major Code: 8089
- Degree Awarded: Master of Science
- Age Restriction: N
- Admission Status: graduate
- Location/s: main campus
- Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

**Program Chair**

George A. Maul, Ph.D.

Earth remote sensing is the science, engineering and art of quantitative measurement from satellites, aircraft, marine vehicles, buoys and moorings, radar and other platforms removed from the target. It includes understanding the instrumentation, software, radiative transfer, hydroacoustics and principles of systems designed to acquire, process and interpret information about Earth for application to vital contemporary problems in agriculture, coastal zone management, ecology, engineering, environmental science and resource management, forestry, land use, meteorology, natural hazards, oceanography, urban planning and other issues.

**Admission Requirements**

Students applying for admission to the Earth remote sensing program should have undergraduate majors in the physical or life sciences with strong backgrounds in computer science. Students with bachelor's degrees in other scientific or engineering fields may need to complete certain preparatory coursework before starting the master of science program, and completion of such courses may require additional time. Any such requirements will be determined by the program chair and graduate faculty before admission. The prospective student will be advised of these requirements prior to acceptance. Applicants must submit GRE General Test scores for evaluation, a statement of interests, a résumé and three letters of recommendation.

General admission requirements and the process for applying are presented in the "Academic Overview" section.
Degree Requirements
The Master of Science in Earth Remote Sensing is offered with thesis and nonthesis options. The thesis option requires the satisfactory completion of a minimum of 30 credit hours of required and elective credits (includes six credit hours of thesis) and the nonthesis option requires a minimum of 33 credits hours (includes a written final program examination), based on an approved program plan developed in conjunction with the faculty adviser. Included in the total are at least nine credit hours of core remote sensing courses as listed below.

Core Courses
ENS 5000 Environmental Science Seminar (each semester) 0
ENS 5010 Environmental Optics and Remote Sensing 3
MET 5233 Atmospheric Remote Sensing 3
OCE 5550 Bathymetry 3
OCN 5704 Oceanic Remote Sensing 3

Electives
A list of restricted electives is available from the department.

The curriculum is modified to meet the student’s needs, background and area emphasis, which may be atmospheric, land, submarine or oceanic remote sensing. Students are required to attend the graduate seminar.

Environmental Resource Management, M.S.

Major Code: 8135
Degree Awarded: Master of Science

Age Restriction: N
Admission Status: graduate

Delivery Mode/s: classroom only
Location/s: main campus

Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Program Chair
John G. Windsor Jr., Ph.D.

Environmental resource management has become an area of national and international significance. Resource managers, typically in the public and private developmental sectors, face increasingly complex technical problems that cut across several of the more traditional educational disciplines. In addition to the fundamentals of biological and chemical environmental processes, managers must be knowledgeable in local and global cause and effect relationships of human activities in the development and use of environmental resources. Resource managers must also understand the legal and regulatory aspects of resources management. Recognizing these multidisciplinary needs, the master’s degree program in environmental resource management is closely associated with the environmental science program at Florida Tech and includes both university coursework and an internship with a regulatory agency, NGO or private company that manages environmental resources. Graduates are well prepared to effectively interact with engineers, scientists, managers and politicians.

Admission Requirements
Students applying for admission to the environmental resources management program should have undergraduate majors in science or engineering, or sufficient coursework in the physical and life sciences and engineering to readily understand the fundamental biological, chemical and physical relationships important in environmental resource management. In some instances, additional preparatory work in some areas may be required at the beginning of the program. The prospective student is advised of such requirements before final acceptance. Each applicant is strongly encouraged to arrange for a conference regarding program content and qualifications with faculty and the program chair or other faculty member before arriving on campus to begin an academic program.

General admission requirements and application procedures are presented in the Academic Overview section.

Degree Requirements
The degree requires satisfactory completion of 30 credit hours of required and elective courses. Included in the total are 24 credit hours of required courses and internship, and six credit hours of selected elective topics as specified in a master’s program plan developed in conjunction with the student’s adviser. An internship document is required by the academic unit, and the student makes an oral presentation of the internship assignment to the graduate seminar or a professional society meeting and to the student’s internship advisory committee. Thesis or internship registration must be continuous from the initial registration until graduation.

Required Courses
BIO 5030 Conservation Biology 3
ENS 5000 Departmental Seminar (each semester) 0
ENS 5001 Global Environmental Problems and Solutions 3
ENS 5004 Aquatic Environmental Toxicology 3
ENS 5009 Internship 6
ENS 5700 Introduction to Water Resources 3
ENS 5701 Environmental Regulation and Impact Assessment 3
OCN 5210 Marine and Environmental Chemistry 3

Electives
BUS 4425 Environmental and Urban Planning 3
BUS 4426 Environmental and Resource Economics 3
CVE 4000 Engineering Economy and Planning 3
EDS 5430 Issue Investigation and Evaluation 3
ENS 4001 The Earth System 3
ENS 4010 Geographic Information Systems 3
ENS 5010 Environmental Optics and Remote Sensing 3
ENS 5101 Introduction to Air Pollution 3
ENS 5600 Radiation and Environmental Protection 3
OCN 5801 Coastal Systems Planning 3

Note: Electives listed above are accepted in both environmental resource management and coastal zone management master’s degree programs.

Environmental Science, M.S.

Major Code: 8128
Degree Awarded: Master of Science

Age Restriction: N
Admission Status: graduate

Delivery Mode/s: classroom only
Location/s: main campus

Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Program Chair
John G. Windsor Jr., Ph.D.

Today’s increasingly complex technological society has placed new demands on our understanding of human interaction with the environment. In fact, the need has never been greater for highly skilled scientists capable of developing basic data from which far-reaching decisions can be made regarding the intelligent use and protection of our natural environment. Recognizing these needs, the environmental science master’s program provides a thorough background in the biological and chemical fundamentals of natural environmental systems with specific areas of emphasis related to water and air resources, water and wastewater treatment, hazardous and toxic materials including nuclear wastes and basic processes governing the interaction of humans and the natural environment.

Admission Requirements
Students applying for admission to the environmental science program should have undergraduate majors in the physical or life sciences with strong backgrounds in chemistry and biology. Students
with bachelor's degrees in other scientific or engineering fields may need to complete certain preparatory coursework before starting the master of science program, and completion of such courses may require additional time. Any such requirements will be determined by the program chair and graduate faculty before admission. The prospective student will be advised of these requirements prior to acceptance. Applicants must submit Graduate Record Exam General Test scores for evaluation, a statement of interests, a résumé and three letters of recommendation.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements

A Master of Science in Environmental Science requires the satisfactory completion of 30 credit hours of required and elective credits based on an approved program plan developed in conjunction with the faculty adviser. Included in the total are 15 credit hours of core environmental courses as listed below and six credit hours of thesis research under the supervision of a member of the graduate faculty. Students are required to attend the graduate seminar. A student registers for graduate seminar each semester and makes an oral presentation of research results after completing thesis research. A nonthesis option is also available. In lieu of the thesis, the student completes an additional nine credit hours coursework and must pass a written master's final program examination.

Core Courses

ENS 5000 Environmental Science Seminar (each semester).............. 0
ENS 5010 Environmental Optics and Remote Sensing...................... 3
ENS 5101 Introduction to Air Pollution ...................................... 3
ENS 5700 Introduction to Water Resources .................................. 3
ENS 5800 Limnology I ............................................................. 3
OCN 5210 Marine and Environmental Chemistry.......................... 3

The remaining coursework in the master's program is normally developed by the degree candidate, his/her adviser and the program chair. A list of restricted electives is available from the department.

Meteorology, M.S.

Program Chair

George A. Maul, Ph.D.

Atmospheric science is focused on understanding Earth's gaseous envelope, predicting its evolution and mitigating human impacts. The M.S. program at Florida Tech is uniquely interdisciplinary, drawing on expertise from the College of Aeronautics, the College of Engineering and the College of Science. As such, the M.S. in meteorology can have special emphasis in areas such as marine meteorology, water resources, atmospheric chemistry, aviation meteorology or remote sensing. Collaborative research is conducted with specialists from the nearby NASA Kennedy Space Center, the USAF 45th Weather Squadron, the NOAA National Weather Service, the Harbor Branch Oceanographic Institution, Wind and Hurricane Impacts Research Laboratory (WHIRL) and local government agencies or corporations.

Admission Requirements

A student applying for admission to the graduate meteorology program should have an undergraduate major in the physical sciences or engineering. Preparatory coursework may need to be completed before starting the master of science program, and completion of such courses may require additional time. Any such requirements will be determined by the program chair and graduate faculty before admission. The prospective student will be advised of these requirements before acceptance. Applicants must submit GRE General Test Scores for evaluation.

Degree Requirements

The M.S. degree requires satisfactory completion of 30 credit hours of required and elective courses including thesis, based on an approved plan developed in conjunction with the faculty adviser. A nonthesis option is also available, where in lieu of a thesis the student completes an additional nine credit hours of coursework (for a total of 33 credit hours) and must pass a written master's final program examination. Students with bachelor's degrees in meteorology normally take the core courses plus electives emphasizing their areas of special interest. Students with bachelor's degrees in fields other than meteorology are required to complete the core and other graduate courses in addition to appropriate courses necessary for certification as a professional meteorologist by the American Meteorological Society (see undergraduate curriculum). Students are required to attend the graduate seminar. A student registers for graduate seminar each semester and makes an oral presentation of research results after completing thesis research.

Required Courses

ENS 5000 Environmental Sciences Seminar (each semester).............. 0
MET 5001 Principles of Atmospheric Science............................... 3
MET 5233 Atmospheric Remote Sensing ..................................... 3
MET 5305 Dynamic Meteorology 1 ..... ................................. 3
MET 5306 Dynamic Meteorology 2 ........................................... 3

Electives

AVS 5201 Aviation Meteorology Theory and Practice .................... 3

ENS 5101 Introduction to Air Pollution .................................... 3
ENS 5700 Introduction to Water Resources ................................ 3
ENS 5800 Limnology ............................................................. 3
MET 4310 Climatology .......................................................... 3
MET 4410 Mesoscale Meteorology ........................................... 3
MET 5310 Numerical Weather Prediction ................................... 3
OCE 5570 Marine Hydrodynamics and Wave Theory .................... 3
OCE 5586 Ocean Engineering Data Analysis ............................... 3
OCN 5001 Principles of Oceanography ....................................... 3
OCN 5210 Marine and Environmental Chemistry ......................... 3
OCN 5401 Principles of Physical Oceanography .......................... 3
OCN 5403 Ocean Wave Theory .............................................. 3
OCN 5405 Dynamic Oceanography ......................................... 3
OCN 5407 Marine Meteorology .............................................. 3
OCN 5409 Geophysical Fluid Dynamics ..................................... 3
OCN 5704 Oceanic Remote Sensing ......................................... 3
OCE 5080 Thermodynamics ................................................... 3
SPS 4030 Physics of the Atmosphere ....................................... 3
SPS 5031 Planetary Science 2: Atmospheres .............................. 3

Note: Electives listed above are accepted in the M.S. Meteorology degree program, but no more than six credit hours of 4000-level courses from the department (ENS, MET, OCE, OCN) may be used for the master's degree.
Ocean Engineering, M.S.

Major Code: 8084
Degree Awarded: Master of Science
Age Restriction: N
Admission Status: graduate
Delivery Mode/s: classroom only
Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Program Chair
Stephen L. Wood, Ph.D., P.E.

The curriculum is designed to allow the ocean engineer to broaden professional expertise in preparation for a challenging career in industry or for further graduate study. Although emphasis is placed on a core of required courses, the student is encouraged to concentrate efforts in one of several areas of interest through a choice of elective courses. Both thesis and nonthesis tracks are available.

The Master of Science in Ocean Engineering can be earned on either a full-time or part-time basis. Although a full-time student may complete coursework within two or three semesters, thesis activities normally involve a further one or two semesters of study. Graduate student assistants normally require additional time. A student can start graduate studies in either the fall or spring semester, but fall semester is recommended.

Admission Requirements
An applicant should normally have an undergraduate degree in some field of engineering or in one of the physical sciences. Every applicant should have a mathematics background through differential equations along with introductory courses in physics, chemistry, and computer programming. A student who has graduated from a nonengineering program will be required to complete additional coursework as part of the master's degree program. Although not required for admission, an on-campus interview is highly recommended. Applicants must submit GRE General Test Scores for evaluation.

Applications from international students are invited and will be evaluated with consideration given to academic standards in the country where baccalaureate studies were taken.

General admission requirements and application procedures are presented in the Academic Overview section.

Degree Requirements
The degree of Master of Science in Ocean Engineering is conferred on students who have successfully completed a minimum of 30 credit hours (including thesis) of required and elective coursework. Thesis work may be primarily analytical or experimental in nature, or a comprehensive design study, or a computational investigation involving state-of-the-art computer modeling techniques. The thesis may be replaced by three courses (nine credit hours) following approval of a written petition to the program chair. The nonthesis track requires a minimum of 33 credit hours, an oral final program examination and a technical paper. A thesis is usually required for any student receiving financial support through the Department of Marine and Environmental Systems.

*May be replaced by nine credit hours of coursework and a major paper.

Recommended Electives
An additional course to meet the minimum total requirements for the degree can be selected from the following list of recommended electives. Other courses can also be elected with approval of the student advisory committee.

Aquaculture Engineering
BIO 4620 Fish Aquaculture and Management
OCE 4531 Instrumentation Design and Measurement Analysis
OCE 5519 Corrosion Engineering
OCE 5526 Advanced Coastal Engineering Structures
OCE 5542 Ocean Engineering Systems
OCE 5575 Applied Marine Hydrodynamics
OCE 5586 Ocean Engineering Data Analysis

Coastal Engineering and Processes
OCE 4545 Hydroacoustics
OCE 5525 Coastal Processes and Engineering
OCE 5526 Advanced Coastal Engineering Structures
OCE 5542 Ocean Engineering Systems
OCE 5563 Port and Harbor Engineering
OCE 5586 Ocean Engineering Data Analysis
OCE 5704 Oceanic Remote Sensing

Hydrographic Engineering
ECE 5245 Digital Signal Processing I
ENS 4010 Geographic Information Systems
OCE 4545 Hydroacoustics
OCE 5550 Bathymetry
OCE 5571 Naval Architecture
OCE 5586 Ocean Engineering Data Analysis
OCE 5704 Oceanic Remote Sensing

Materials and Structures
MAE 5050 Finite Element Fundamentals
OCE 4574 Structural Mechanics of Marine Vehicles
OCE 5519 Corrosion Engineering
OCE 5526 Advanced Coastal Engineering Structures

Naval Architecture
OCE 4531 Instrumentation Design and Measurements Analysis
OCE 4572 Structural Design of Marine Vehicles
OCE 4573 Ship Design
OCE 5519 Corrosion Engineering
OCE 5542 Ocean Engineering Systems
OCE 5571 Naval Architecture
OCE 5573 Dynamics of Marine Vehicles
OCE 5575 Applied Marine Hydrodynamics
OCE 5586 Ocean Engineering Data Analysis
OCE 5590 Design of Marine Propulsion Systems

Ocean Energy
ECE 4681 Introduction to Electrical Power Systems
ECE 5683 Power Systems Operation and Control
ECE 5684 Power System Reliability and Planning
ENS 5300 Principles of Renewable Energy
OCE 4531 Instrumentation Design and Measurements Analysis
curriculum. The nonthesis track requires a minimum of 30 credit hours (including thesis) of required and elective coursework. The thesis track requires a minimum of 33 credit hours and an additional three credit hours can be granted in place of the three credit hours of elective, subject to approval by the program chair. Thesis or internship registration must be continuous from the initial registration until graduation.

Degree Requirements
- The Master of Science in Oceanography – Chemical Oceanography is conferred on students who have successfully completed a minimum of 30 credit hours (including thesis) of required and elective coursework. The nontesis track requires a minimum of 33 credit hours and a final program examination.

Curriculum
- To earn the master of science degree, the student must complete the following courses or their equivalents. Equivalent coursework can be substituted for required courses as recommended by the student's adviser and program chair. Representative electives for each option are available from advisers. At least six credit hours of thesis or internship is required, and an additional three credit hours can be granted in place of the three credit hours of elective, subject to approval by the program chair. Thesis or internship registration must be continuous from the initial registration until graduation.

Program Chair
- John G. Windsor Jr., Ph.D.

The master of science degree can be earned in one of five options: biological, chemical, geological or physical oceanography, or coastal zone management. The successful student is well prepared for a challenging professional career or for continuing with graduate studies.

Admission Requirements
- General admission requirements and the process for applying are presented in the Academic Overview section.

Students may be admitted during any semester, but for optimal scheduling, the fall term is recommended. Students with deficiencies in their undergraduate preparation (up to 12 credit hours) may take deficiencies and courses for graduate credit concurrently. GRE General Test scores and a statement of objectives are required and should be sent to the Office of Graduate Admissions. Although not required for admission, an on-campus interview is highly recommended.

The applicant should have an undergraduate major in one of the physical or life sciences with a background that includes computer science, mathematics through calculus and at least one year each of college biology, chemistry and physics. The biological background should include invertebrate zoology.

Degree Requirements
- The Master of Science in Oceanography – Biological Oceanography is conferred on students who have successfully completed a minimum of 30 credit hours (including thesis) of required and elective coursework. The nonthesis track requires a minimum of 33 credit hours and a final program examination.

Students may be admitted during any semester, but for optimal scheduling, the fall term is recommended. Students with deficiencies in their undergraduate preparation (up to 12 credit hours) may take deficiencies and courses for graduate credit concurrently. GRE General Test scores and a statement of objectives are required and should be sent to the Office of Graduate Admissions. Although not required for admission, an on-campus interview is highly recommended.

The applicant’s undergraduate major should be in chemistry, mathematics, physical science or engineering. The academic background should include computer science, mathematics through calculus, and organic, physical and analytical chemistry.

Degree Requirements
- The Master of Science in Oceanography – Chemical Oceanography is conferred on students who have successfully completed a minimum of 30 credit hours (including thesis) of required and elective coursework. The nonthesis track requires a minimum of 33 credit hours and a final program examination.

Curriculum
- To earn the master of science degree, the student must complete the following courses or their equivalents. Equivalent coursework can be substituted for required courses as recommended by the student's adviser and program chair. Representative electives for each option are available from advisers. At least six credit hours of thesis or internship is required, and an additional three credit hours can be granted in place of the three credit hours of elective, subject to approval by the program chair. Thesis or internship registration must be continuous from the initial registration until graduation.

### Environmental Science, Ph.D.

**Major Code:** 9128  
**Degree Awarded:** Doctor of Philosophy  
**Age Restriction:** N  
**Delivery Mode/s:** classroom only  
**Admission Status:** graduate  
**Location/s:** main campus  

**Admission Requirements**

An applicant for the doctoral program in environmental science must have a bachelor's or master's degree from an accredited institution in environmental science, biology, chemistry or other appropriate science curriculum. In some cases, certain undergraduate courses must be taken to remediate areas of deficiency before a student can start the doctoral program.

For admission, a student should have a superior academic record and at least three letters of recommendation, including one from the master's degree thesis adviser. Preference will be given to students with high scores on the Graduate Record Examination.

Included with the application should be a short but clear statement of the interest and objectives of the applicant. Although not absolutely required, an on-campus interview is highly recommended.

General admission requirements and the process for applying are presented in the Academic Overview section.

### Degree Requirements

The doctoral degree is primarily a research degree and is conferred in part in recognition of research accomplishments. Each student must complete an approved program of coursework; pass the comprehensive examinations; write an acceptable research proposal for admission to candidacy; complete a program of significant original research; prepare and defend a dissertation concerning the research; and present a seminar on the research. Each candidate is expected to publish a major portion of the dissertation in refereed national or international journals. A minimum of 24 credit hours of coursework and 24 credit hours of dissertation beyond a master's degree are required.

General degree requirements are presented in the Academic Overview section of this catalog and on the Florida Tech graduate programs Web site.

### Curriculum

A program of study must be approved by the student's adviser and the program chair. A wide degree of latitude is allowed in course selection and research interest within the capabilities of the university and the student's academic background.

Before admission to doctoral candidacy, the student may be required to demonstrate proficiency in a computer language or a reading proficiency of scientific literature in one foreign language. The chosen language should allow access to important literature in the student’s area of research. This requirement is imposed at the discretion of the doctoral committee.

After admission to doctoral candidacy, a yearly seminar demonstrating progress must be presented to the graduate faculty.
The doctoral degree is granted in recognition of high achievement and the ability to investigate scientific problems independently. The program consists of advanced studies to prepare the student for engineering research, and completion of a research project that leads to a significant contribution to the knowledge of a particular problem. Each student must pass the preliminary written examination, complete an approved program of study, pass the comprehensive written and oral examinations, complete a program of significant research, publish the results of the research, and prepare and defend a dissertation concerning the research.

Course Work and Dissertation Summary
Doctoral coursework minimum credit hours beyond the master’s degree ......................................................... 24
Doctoral dissertation minimum credit hours ................................................................. 24
MINIMUM CREDITS BEYOND MASTER’S DEGREE ................................................................. 48

Courses must be taken in several areas to assure that all graduates of the doctoral program possess the breadth of knowledge necessary to work in the field of ocean engineering. A minimum of nine credit hours of coursework must be taken in mathematics and computer science, and 21 credit hours must be taken in ocean engineering, as part of the student’s graduate coursework (including master’s courses). A minimum of 15 credit hours of coursework must be directly related to the dissertation research.

The dissertation research is normally conducted on a topic related to current faculty research. The ocean engineering program faculty currently have research interests in coastal engineering, corrosion, naval architecture, submersibles, ocean systems and instrumentation.

After admission to doctoral candidacy, a yearly seminar demonstrating progress must be presented to the graduate faculty.

Oceanography, Ph.D.

The doctoral of philosophy degree is offered to students who want to carry out advanced research in an area of existing faculty expertise. The doctoral degree is granted in recognition of high achievement and the ability to investigate scientific problems independently. The program consists of advanced studies to prepare the student for engineering research, and completion of a research project that leads to a significant contribution to the knowledge of a particular problem. Each student must pass the preliminary written examination, complete an approved program of study, pass the comprehensive written and oral examinations, complete a program of significant research, publish the results of the research, and prepare and defend a dissertation concerning the research.

Course Work and Dissertation Summary
Doctoral coursework minimum credit hours beyond the master’s degree ......................................................... 24
Doctoral dissertation minimum credit hours ................................................................. 24
MINIMUM CREDITS BEYOND MASTER’S DEGREE ................................................................. 48

Courses must be taken in several areas to assure that all graduates of the doctoral program possess the breadth of knowledge necessary to work in the field of ocean engineering. A minimum of nine credit hours of coursework must be taken in mathematics and computer science, and 21 credit hours must be taken in ocean engineering, as part of the student’s graduate coursework (including master’s courses). A minimum of 15 credit hours of coursework must be directly related to the dissertation research.

The dissertation research is normally conducted on a topic related to current faculty research. The ocean engineering program faculty currently have research interests in coastal engineering, corrosion, naval architecture, submersibles, ocean systems and instrumentation.

After admission to doctoral candidacy, a yearly seminar demonstrating progress must be presented to the graduate faculty.

Degree Programs—College of Engineering 129
biological, chemical, physical and geological oceanography, and instrumentation investigations.

**Environmental Sciences**

The environmental sciences program offers specialized facilities for instruction and research. The Marine and Environmental Chemistry Laboratory is equipped with standard water and wastewater sampling and analysis equipment. In addition, analytical instruments provided for advanced study include a total organic carbon analyzer, atomic absorption spectrophotometers and scintillation counters. Florida Tech maintains a variety of small and large boats for fieldwork. Analytical capabilities are extended by means of cooperative projects with the departments of biological sciences and chemistry.

Faculty and graduate students are actively engaged in a variety of environmental research projects, including effects of agricultural and urban stormwater runoff on river and estuarine water quality, measurement of quantities and quality of groundwater seepage in Florida lakes, dissolved oxygen budgets in aquatic systems, trace metal contamination of natural waters and sediments, acid deposition, lake trophic state classifications, trace organic contamination in coastal systems, hyperspectral remote sensing, decomposition and sedimentation of aquatic macrophytes.

**Ocean Engineering**

The ocean engineering program includes facilities for traditional design activities, several stations for computer-aided design techniques and a reference data collection. Ocean engineering provides facilities for structural testing and pressure testing and a Surf Mechanics Laboratory. The materials and corrosion laboratory specializes in design and testing of materials (concrete, composites and plastics) for marine applications.

Research interests of the faculty center on coastal engineering, corrosion and materials, ocean mineral exploitation, waste disposal, naval architecture and shipbuilding (including small craft), fluid dynamics, instrumentation engineering and development, and marine positioning.

Ocean engineering facilities support both traditional design activities and computer-aided design. The Underwater Technologies Laboratory has facilities for the design and construction of surface and underwater vehicles such as ROVs and AUVs. The Instrumentation Laboratory is equipped with testing and calibration equipment, machining and construction tools, and deployment facilities.

A close relationship is maintained with the engineering division of Harbor Branch Oceanographic Institute of Florida Atlantic University. Graduate students, especially those having interests in submersibles, exploratory equipment and instrumentation, may have the opportunity to conduct thesis research in conjunction with the Harbor Branch staff and use facilities at the institution.

Ship and marine facilities provide an excellent base for research activities involving all aspects of offshore and coastal ship operations, structures, erosion, and environmental control applications. The sheltered waters and geography of the Indian River Lagoon allow excellent conditions for undertaking control and propulsion research using large models or full-scale craft.

**Oceanography**

**Biological oceanography:** The major emphasis in this laboratory is directed toward pelagic and benthonic investigations. Available equipment for student and research needs include fluorometers, collection nets, trawls, grabs, and photographic and microscopic instruments. A controlled environmental room is operated within this laboratory.

**Chemical oceanography:** This laboratory is equipped to enable both routine and research-level analyses on open ocean and coastal lagoonal waters. Major and minor nutrients, heavy-metal contaminants and pollutants can be quantitatively determined. Analytical instruments include scintillation counters, organic carbon analyzers, fluorescence spectrometers, ultraviolet and visible light spectrophotometers, an atomic absorption spectrometer and field measurement equipment.

**Marine geology and geophysics:** This laboratory contains state-of-the-art equipment for the compositional and textual analysis of sediment and water samples, including a rapid sediment analyzer and computer-assisted sieve stations. High- and low-temperature ovens, PC-based computer workstations and suspended sediment filtration systems are also available. In addition, the laboratory houses vibracone and sediment grab sampling equipment.

**Physical oceanography:** Supports graduate research in ocean waves, coastal processes, tsunamis, climate change, circulation and pollutant transport. In addition, current meters, tide and wind recorders, salinometers, wave height gauges, a side-scan sonar, CTD system, ADCP and other oceanographic instruments are available.

**Evinrude Marine Operations Center and research vessels:** This facility houses small outboard-powered craft and medium-sized workboats. These vessels are available to students and faculty for teaching and research use in the freshwater tributaries and the lagoon. Chartered research vessels are the focal point of research in the Indian River Lagoon and coastal areas, as well as teaching in oceanography and marine meteorology.

**Vero Beach Marine Laboratory:** An oceanfront marine research facility, owned and operated by Florida Tech and located in Vero Beach, just 40 minutes from campus. Laboratory and office space total approximately 4,500 square feet. Flowing seawater allows research in such areas as aquaculture, biofouling and corrosion. See the Academic Overview section.

**Harbor Branch Oceanographic Institute of Florida Atlantic University (HBOI):** The department maintains a close working relationship with HBOI, located about an hour from campus between Vero Beach and Fort Pierce. Scientists and engineers from HBOI interact with Florida Tech’s students and faculty, and make their facilities and expertise available in directing student research.

**Surf Mechanics Laboratory:** The wave channel in the laboratory supports teaching and research in wave mechanics, marine hydrodynamics, ocean instrumentation, and coastal processes.
Department of Mechanical and Aerospace Engineering

Pei-feng Hsu, Ph.D., Head

Degree Programs

Aerospace Engineering, B.S.
Aerospace Engineering, M.S.

Areas of Specialization:
- Aerodynamics and Fluid Dynamics
- Aerospace Structures and Materials
- Combustion and Propulsion

Aerospace Engineering, Ph.D.
Mechanical Engineering, B.S.
Mechanical Engineering, M.S.

Areas of Specialization:
- Automotive Engineering
- Biomedical Engineering
- Dynamic Systems, Robotics and Controls
- Structures, Solid Mechanics and Materials
- Thermal-Fluid Sciences

Mechanical Engineering, Ph.D.

Professors

Guy A. Boy, Ph.D., University Professor, human-centered design, cognitive engineering, cockpit design and evaluation, air traffic management, human factors in aerospace engineering, advanced interaction media, life-critical systems, technological and organizational automation, knowledge management, complex systems, modeling and simulation, technical and operational documentation, information systems.

Pei-feng Hsu, Ph.D., micro/nanoscale radiation transfer, radiative and multimode heat transfer, premixed combustion in porous ceramics, numerical methods in heat transfer, pulsed laser applications in medical imaging and material property diagnostics, thermal systems designs (heat exchangers, HVAC).

Pierre M. Larochelle, Ph.D., P.E., synthesis and analysis of mechanisms and machines, design and control of robotic manipulators, theoretical kinematics, design of spherical and spatial mechanisms, computer-aided design.

T. Dwayne McCay, Ph.D., low-density gas dynamics, high-speed flows, propulsion systems, laser interaction with materials.

Kunal Mitra, Ph.D., thermal fluid sciences with emphasis on laser applications, thermal radiation, microscale heat transfer, material processing, bio-heat transfer modeling, biomedical imaging, short-pulse laser therapy, photovoltaic systems.

Chelakara S. Subramanian, Ph.D., P.Eng. (U.K.), experimental fluid mechanics, turbulence measurements, LDV, photoluminescence kubometry and thermometry, wind tunnel experimentation, wind engineering, structure of complex turbulent flows, turbulence modeling, boundary layer receptivity, energy efficient systems, film cooling.

Research Professors

Mary H. McCoy, Ph.D., P.E., metallurgy, crystal growth, laser interaction with materials.

Associate Professors

David C. Fleming, Ph.D., structural mechanics, advanced composite materials, crashworthy aerospace vehicle design, finite element analysis, fracture mechanics.

Hector Gutierrez, Ph.D., P.E., mechatronics, nonlinear control, electromechanical systems, electromechanical energy conversion, magnetic suspension systems, computer-based instrumentation, computer-aided engineering of control systems.

Daniel R. Kirk, Ph.D., fluid mechanics, heat transfer, combustion, air-breathing propulsion, chemical and nuclear thermal rocket propulsion, shock tube flow experimentation, high-speed aerodynamics, internal flows, superconductivity for launch assist, spacecraft shielding, energy storage and propulsion.

Paavo Sepri, Ph.D., fluid mechanics, turbulence, convective heat transfer, boundary layers, aerodynamics, wind tunnel testing, droplet combustion, computational fluid dynamics.

Yahya I. Sharaf-Eldeen, Ph.D., P.E., modeling, simulation, and design of dynamic systems, advanced dynamics, vibration, design of machinery, thermal-fluid sciences, energy/power systems.

Bo Yang, Ph.D., micro/nanomechanics, fracture mechanics, computational mechanics applying finite elements, boundary elements (Green's function-based mesh-reduction method), molecular dynamics, multiscale modeling.

Assistant Professors

Mark R. Archambault, Ph.D., rocket combustion and propulsion, rocket fuel injector modeling, computational fluid dynamics, multi-phase fluid flow, spray and particulate dynamics, hydrogen fuel cell modeling.

Youngsik Choi, Ph.D., nanomachining, biomanufacturing processes, precision engineering, mechanical design, superfinish hard machining, nanomechanics, fracture mechanics.

Taeyoung Lee, Ph.D., geometric mechanics and control, geometric numerical integration, nonlinear control, adaptive control, estimation, neural network, multiscale systems.

Razvan Rusovici, Ph.D., structural dynamics, smart material applications, damping modeling, vibration and acoustics, sensors and instrumentation, experimental modal analysis, turbomachinery, biomechanics.

Shengyuan Yang, Ph.D., cell and tissue mechanics and mechnobiology, micro- and nano-electromechanical systems (MEMS/NEMS), bio-MEMS/NEMS.

Adjunct Faculty

M. Guvendick, Ph.D.; T. Mashburn, Ph.D.; D. Tse, Ph.D.; B. Vu, Ph.D.; L. Weaver, Ph.D.; D. Willard, M.S.

Professors Emeriti

Thomas E. Bowman, Ph.D.; John J. Engblom, Ph.D., P.E.; L. Weaver, Ph.D.; D. Willard, M.S.

Mission Statement

The mission of the mechanical and aerospace engineering department is to prepare our students to be successful professionals in the global industrial, research and/or academic environment. This is achieved via developing curricula that enable students to achieve four education objectives: academic fundamentals, engineering practices, teamwork and communication, and professional development. Graduates of the mechanical and aerospace engineering department are equipped with the knowledge and capabilities to solve real-world engineering problems and to advance the state-of-the-art in their selected fields.

UNDERGRADUATE DEGREE PROGRAMS

Undergraduate Programs Chair
Chelakara S. Subramanian, Ph.D.

Aerospace Engineering, B.S.

Degree Programs—College of Engineering
Graduates have successfully applied in future moon-base and space station missions, as well as manned exploration of Mars. The many spin-offs from their involvement in these activities in space will surely benefit humanity here on Earth just as their previous space involvement has.

The aerospace engineering undergraduate curriculum at Florida Tech presents the fundamentals underlying modern aerospace engineering and prepares the student for a lifetime of continued learning. During the freshman and sophomore years, emphasis is placed on mathematics and physics, while aerospace engineering is introduced through a sequence of three courses. The sophomore and junior years direct the student toward the engineering sciences, including materials science, thermodynamics and fluid mechanics. During the junior and senior years, the study becomes progressively centered on the specific issues facing practicing aerospace engineers. The student uses the basic tools imparted during the first two years and applies them in studies of aerodynamics, propulsion systems, aerospace structures and design projects. Other courses taken during the last two years expand the student's knowledge in the fields of mechanics of solids, electric circuits, flight stability and control, and mission analysis. Technical electives taken during the junior and senior years allow the student to direct the program toward specific areas of personal interest, such as flight training and human factors engineering, space science, mathematics, computer science or other engineering disciplines.

Laboratory experiences are essential to the education of engineers, and these are provided in chemistry, physics, computers, materials, fluids, structures and experimental aerodynamics. The capstone of the educational process is embodied in the aerospace engineering design project, which synthesizes and focuses elements from the various disciplines into a design activity of current aerospace engineering interest. The faculty of the program serve jointly in the supervision and consultation for these projects.

Students are encouraged to define career objectives early in the program (preferably during the sophomore year), so that in consultation with faculty advisers, electives can be selected that are best suited to the achievement of specific goals.

Students may also choose to benefit from the experience gained through the cooperative education program. After graduation, the aerospace engineering student is prepared to pursue a career in either industry or government as a practicing engineer, or to enter graduate study in engineering, applied mechanics or mathematics.

**Educational Objectives**

The broad educational objectives of the aerospace engineering program at Florida Tech are:

**Academic fundamentals:** Graduates have successfully applied and integrated their knowledge of fundamental principles in their chosen career.  

**Engineering practice:** Graduates have used their engineering skills in the successful completion of an engineering project.  

**Teamwork and communication:** Graduates have demonstrated the ability to communicate their ideas and technical results verbally, in writing and via presentations, and are effective team members.  

**Professional development:** Graduates have advanced their knowledge and contributed to the profession and society.

### Degree Requirements

Candidates for a Bachelor of Science in Aerospace Engineering must complete the minimum course requirements outlined in the following curriculum.

#### Freshman Year

Graduates have successfully applied their knowledge and contributed to the profession and society. The nuclear technology curriculum is an interdisciplinary program.

After graduation, the mechanical engineering student is prepared to pursue a career either in industry or government as a practicing engineer, or to enter graduate work in engineering, applied mechanics or mathematics. In some cases, mechanical engineering graduates also enter professional schools of medicine, law or business.

Students are encouraged to define career objectives early in the program (preferably during the sophomore year) so that in consultation with faculty advisers, electives can be selected that are best suited to the achievement of specific goals.

Educational Objectives
The broad educational objectives of the mechanical engineering program at Florida Tech are:

Academic fundamentals: Graduates have successfully applied and integrated their knowledge of fundamental principles in their chosen career.

Engineering practice: Graduates have used their engineering skills in the successful completion of an engineering project.

Teamwork and communication: Graduates have demonstrated the ability to communicate their ideas and technical results verbally, in writing and via presentations, and are effective team members.

Professional development: Graduates have advanced their knowledge and contributed to the profession and society.

Degree Requirements
Candidates for a Bachelor of Science in Mechanical Engineering must complete the minimum course requirements as outlined in the following curriculum.

For definitions of electives for engineering programs, see the Academic Overview section.

Mechanical engineers are deeply involved in activities that are essential to our modern civilization. These activities include the research, development, design and testing of materials, structures and machines for the generation of power, for transportation and for the production of electricity by the conversion of energy from various sources including chemical, nuclear, solar and geothermal; conception and design of all types of machines that serve humans and their many needs; construction and operation of production machinery for the manufacture of materials and consumer products; and instrumentation, control and regulation of these and other types of manual and automatic mechanical systems.

The mechanical engineering undergraduate curriculum at Florida Tech presents the fundamentals underlying modern mechanical engineering and prepares the student for a lifetime of continued learning. During the freshman and sophomore years, the emphasis is placed on mathematics and physics. An introduction to engineering in the freshman year previews the field and gives the students their first experience in engineering design. The sophomore and junior years direct the student toward the engineering sciences, including mechanics of solids, thermodynamics and fluid mechanics. During the junior and senior years, the study becomes progressively centered on the specific issues facing practicing mechanical engineers. The student uses the basic tools imparted during the first two years and applies them in studies of machine systems, instrumentation, automatic controls, thermal systems and design projects. Other courses taken during the last two years expand the student’s knowledge in the fields of thermal energy systems, heat transfer, electronics, vibrations and mathematics. Technical electives taken during the senior year allow the student to direct the program toward specific areas of personal interest.

Laboratory experiences are essential to the education of engineers, and these are provided in chemistry, physics, computer-aided design, materials, fluids and heat transfer. The capstone of the educational process is the senior mechanical engineering design project, which synthesizes and focuses elements from the various disciplines into a design activity of current mechanical engineering interest. The faculty serve jointly in the supervision and consultation for these projects.

The nuclear technology area of emphasis curriculum consists of four courses, available as free and/or technical electives. The objective is to train students from a broad spectrum of engineering disciplines (i.e., mechanical, electrical, civil and chemical) that will be needed to construct, operate, maintain and regulate nuclear power plants and associated facilities. The nuclear technology curriculum is an interdisciplinary program.
The master of science degree can be earned in one of three major areas: aerodynamics and fluid dynamics, aerospace structures and materials, and combustion and propulsion. Because the purpose of each program is to prepare the student for either a challenging professional career in industry or for further graduate study, the programs do not permit narrow specialization. Emphasis is on required coursework in several disciplines in which an advanced-degree engineer in a typical industrial position is expected to have knowledge and problem-solving expertise beyond that normally obtained during an undergraduate engineering education.

The master of science degree can be earned on either a full-time or a part-time basis. Full-time students can complete the program in a minimum of three semesters (four in the case of graduate student teaching assistants). Students beginning their coursework during the spring semester will be able to register for full course loads, although the commencement of thesis work will normally be delayed.

Graduate student teaching assistants are required to successfully complete a three-day teaching assistant seminar offered in August and January of each year.

**Admission Requirements**

An applicant should have an undergraduate major in a field related to aerospace engineering. Applicants whose bachelor’s degrees are in other fields are normally required to take some undergraduate coursework in addition to the program described below, as determined by the department head. Applications are also invited from graduates with undergraduate majors in the physical sciences or mathematics. In these cases, at least one year of undergraduate coursework in aerospace engineering is normally required before starting the master of science program. In evaluating an international application, due consideration is given to academic standards in the country where the undergraduate studies have been performed.

Master’s applicants should take the GRE General Test. Applicants from foreign countries must meet the same requirements as applicants from the United States.

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**

The Master of Science in Aerospace Engineering is offered with both thesis and nonthesis options. Each option requires a minimum of 30 credit hours of coursework. Prior to the completion of nine credit hours, the student must submit for approval a master’s degree program plan to indicate the path chosen and the specific courses to be taken. For the thesis option, up to six credit hours of thesis work may be included in the 30 credit hours’ requirement. The thesis can be primarily analytical, computational or experimental; or it can be some combination of these. In each case, students must demonstrate the ability to read the appropriate engineering literature, to learn independently and to express themselves well technically, both orally and in writing. For the nonthesis option, a student may replace the thesis with additional elective courses and a final program examination, following approval of a written petition submitted to the department head. Generally, students wishing to pursue an academic career are encouraged to choose the thesis option.

**Curriculum**

The program of study leading to the master’s degree in aerospace engineering is offered in the three listed areas of specialization. The minimum program requirements consists of nine credit hours of core courses, six credit hours of mathematics and 15 credit hours (which may include six credit hours of thesis) of electives. Within the 15 credit hours of electives, six credit hours of coursework are restricted electives. The department maintains a list of restricted electives for each specialization.

The nine credit hours of core courses must be chosen in consultation with the student’s adviser from one of the lists below.

**Aerodynamics and Fluid Dynamics**

MAE 5110 Continuum Mechanics
MAE 5120 Aerodynamics of Wings and Bodies
MAE 5130 Viscous Flows
MAE 5140 Experimental Fluid Dynamics
MAE 5150 Computational Fluid Dynamics

All master of science options can be earned on either a full-time or a part-time basis. A two-year projection of course offerings is available on request. Course offerings are arranged to permit the master’s program to be completed by full-time students in a maximum of two calendar years.

**Admission Requirements**

The undergraduate backgrounds of applicants for admission to the master’s degree programs vary considerably. For this reason, a variety of master’s degree options are available. The applicant should have a bachelor of science or equivalent degree from a mechanical engineering program accredited by ABET. In evaluating an international application, consideration is given to academic standards of the school attended and the content of the courses leading to the degree obtained. Master’s applicants are required to take the GRE (General Test).

Applicants whose bachelor’s degrees are in other engineering fields, mathematics, or the physical sciences may be accepted, but will be required to remedy any deficiencies by satisfactorily completing a number of undergraduate courses in preparation for graduate study in mechanical engineering.

**Degree Requirements**

The Master of Science in Mechanical Engineering is offered with both thesis and nonthesis options. Each option requires a minimum of 30 credit hours of approved graduate study; however, within each option, course choices vary considerably. Prior to the completion of nine credit hours, the student must submit for approval a master’s degree program plan to indicate the path chosen and the specific courses to be taken.

The minimum program requirements consist, depending on the specialization, of a minimum of nine credit hours of core courses, six credit hours of mathematics and 15 credit hours of electives (which may include six credit hours of thesis). Within the 15 credit hours of electives, six credit hours of coursework are restricted electives. The department maintains a list of restricted electives for each specialization.

**Curriculum**

Regardless of which degree path the student chooses, the degree candidate must choose one of the following areas of specialization. Listed below are required and elective courses for the master of science specializations.

**Automotive Engineering**

Three courses selected in consultation with the student’s adviser from the list below:

- MAE 5130 Viscous Flows
- MAE 5220 Convection Heat Transfer
- MAE 5310 Combustion Fundamentals
- MAE 5316 Mechatronics
- MAE 5320 Internal Combustion Engines
- MAE 5460 Fracture Mechanics and Fatigue of Materials
- MAE 5486 Crashworthiness
- MAE 5610 Advanced Dynamics
- MAE 5630 Modeling and Simulation of Dynamic Systems

Specialization in this area is concerned with the application of fundamental engineering science concepts and basic mechanical and aerospace engineering methodologies to the design and analysis of modern vehicles for land, sea and air transportation, and their components and systems.

**Biomedical Engineering**

Three courses selected in consultation with the student’s adviser from the list below:

**Required Courses**

- BIO 5210 Applied Physiology
- BME 5702 Biomedical Applications in Physiology

**One course from the following:**

- BME 5103 Transport Processes in Bioengineering
- BME 5259 Medical Imaging
- BME 5569 Orthopedic Biomaterials
- BME 5720 Biomedical Instrumentation
- BME 5740 Cellular Biomechanics

Biomedical engineering applies engineering and science methodologies to the analysis of biological and physiological problems and the delivery of healthcare. The biomedical engineer serves as an interface between traditional engineering disciplines and living systems, and may focus on either, applying the patterns of living organisms to engineering design or engineering new approaches to human health. A biomedical engineer may use his/her knowledge of engineering to create new equipment or environments for such purposes as maximizing human performance or providing non-invasive diagnostic tools. Students can choose elective courses in their area of interest offered by other engineering disciplines.

**Dynamic Systems, Robotics and Controls**

Three courses selected in consultation with the student’s adviser from the list below:

- MAE 5316 Mechatronics
- MAE 5318 Instrumentation and Measurement Systems
- MAE 5480 Structural Dynamics
- MAE 5610 Advanced Dynamics

---

**Degree Programs—College of Engineering**
MAE 5630  Modeling and Simulation of Dynamic Systems  
MAE 5650  Robotics  
MAE 5660  Robot Control

The student’s program of study in this area will be tailored to provide the background and training to pursue a career in a desired and related area of interest. Examples of related areas include design and control of dynamic systems, robotics, vibration, automotive engineering, energy and power systems, etc.

**Structures, Solid Mechanics and Materials**

Three courses selected in consultation with the student’s adviser from the list below:

- MAE 5050 Finite Element Fundamentals
- MAE 5060 Applications in Finite Element Methods
- MAE 5410 Elasticity
- MAE 5420 Advanced Mechanical Design
- MAE 5460 Fracture Mechanics and Fatigue of Materials
- MAE 5470 Principles of Composite Materials

Specialization in this area focuses on analytical and computational techniques as they apply in design. Each student plans a program of study in consultation with a member of the faculty whose professional field is related to the student’s interests.

**Thermal-Fluid Sciences**

Three courses selected in consultation with the student’s adviser from the list below:

- MAE 5130 Viscous Flows
- MAE 5210 Conduction Heat Transfer
- MAE 5220 Convection Heat Transfer
- MAE 5230 Radiation Heat Transfer
- MAE 5310 Combustion Fundamentals

Specialization in this area focuses on heat transfer, combustion and energy systems. Analytical, computational and experimental techniques are emphasized.

**Aerospace Engineering, Ph.D.**

The doctor of philosophy degree program is offered for students who wish to carry out advanced research in any of the three areas of specialization listed under the master of science program or in human-centered design described below. Other research areas within the field of aerospace engineering may be pursued depending on current faculty interests and available facilities.

**Admission Requirements**

A candidate for the doctoral program in aerospace engineering will normally have completed a master’s degree in aerospace or mechanical engineering, or a closely related area of engineering, and have adequate preparation in areas of fundamental science and mathematics.

Doctoral applicants should have strong academic records including a 3.2 cumulative GPA during master’s degree study, provide three letters of recommendation and take the Graduate Record Examination General Test.

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**

The degree of doctor of philosophy is conferred primarily in recognition of creative accomplishment and the ability to investigate scientific or engineering problems independently, rather than for completion of a definite curriculum. The program consists of advanced studies and research leading to a significant contribution to the knowledge of a particular problem. A student’s research may have analytical, computational or experimental components, or some combination of these. Each student is expected to complete an approved program of study beyond that required for a master’s degree as determined by the dissertation committee, pass the comprehensive examination (both written and oral parts), present a dissertation proposal acceptable to the student’s committee, complete a program of significant original research, and prepare and defend a dissertation detailing the research.

The program consists of a minimum of 42 credit hours of study beyond the master’s degree. Of the minimum 42 credit hour requirement, at least 24 shall be for dissertation registration.

The purpose of the comprehensive examination is to cover the student’s area of specialization and areas important to the major field. The examination is given when, in the judgment of the student’s advisory committee, the student has had sufficient preparation in his/her field of study by completing significant coursework in the major area, two related areas of specialization and mathematics, and by initiating doctoral research. The examination must normally be taken before the end of the student’s fourth academic semester after admission into the doctoral program. The written portion of the examination consists of individual parts given by each member of the advisory committee. These written examinations are intended to cover each of the student’s areas of specialization and mathematics. The written portion of the comprehensive examination is followed by an oral component that provides the advisory committee an opportunity for a more in-depth assessment of the student’s readiness for doctoral candidacy. Subsequent to completion of both written and oral components of the comprehensive examination, a dissertation proposal must be submitted to the student’s advisory committee for evaluation. Upon determining that the proposed research is of doctoral quality and that completion is feasible, the student is advanced to candidacy for the doctoral degree.

General degree requirements are presented in the Academic Overview section.

**Curriculum**

The doctoral program of study must be approved by the student’s advisory committee and the department head. Considerable latitude is allowable in course selection, although appropriate advanced courses are expected to form a part of the student’s program. A representative distribution of these courses taken beyond the master’s degree should include, as a minimum, six courses in any combination from the major area, the two related areas and mathematics. The following illustrates a minimum credit requirement for the doctoral program of study beyond the master’s degree.

**Major Area of Specialization, two related Areas of Specialization and Mathematics**

<table>
<thead>
<tr>
<th>Major Area of Specialization</th>
<th>Related Areas of Specialization</th>
<th>Mathematics</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dissertations and credits required</td>
<td>18</td>
<td>18</td>
</tr>
<tr>
<td>Total Credits Required</td>
<td>24</td>
<td>42</td>
</tr>
</tbody>
</table>

Selected course offerings from other engineering and science programs can be taken to fulfill the related area requirements. Each student takes mathematics courses from those offered each
semesters based on the areas of interest and in consultation with the student’s committee. Note that the dissertation credits are a minimum and the committee may require additional credits if they feel sufficient work has not been completed.

**Human-Centered Design**
The program in human-centered design (HCD) is offered for students who wish to carry out advanced research, innovation and leadership in the academic world, as well as fill equivalent positions in industry and government. The program may be completed through one of three areas: aerospace engineering, operations research or computer science. Other research areas within the field may be pursued depending on current trends in the Human-Centered Design Institute (HCDi) of Florida Tech.

The program is designed to attract students who have the greatest potential for expanding the frontiers of knowledge and art of HCD, and in transferring this knowledge and art to others. It is open to graduate students who have a strong interest in people and are ready to learn about applied human and social sciences. HCD requires significant breadth and depth of understanding in engineering, mathematics and science, the mastery of several specialized subjects and the creativity to extend the body of knowledge and art on a particular subject through significant original research.

Each candidate is expected to publish major portions of their dissertation in refereed conferences and journals, and is strongly encouraged to actively participate in research activities of the HCDi while pursuing the degree. The student’s advisory committee and the director of the HCDi must approve the doctoral program of study.

**Mechanical Engineering, Ph.D.**

- **Major Code:** 9131
- **Degree Awarded:** Doctor of Philosophy
- **Age Restriction:** N
- **Delivery Mode/s:** classroom only
- **Location/s:** main campus
- **Admission Materials:** GRE, 3 letters of recommendation, résumé, objectives

The doctor of philosophy degree is offered for students who wish to carry out advanced research in any of the four optional areas of specialization listed under the master of science program. Other research areas may or may not correlate well with current faculty interests and laboratory facilities. In such cases, the mechanical engineering department head should be consulted to determine the feasibility of pursuing advanced research topics that are outside of the four optional areas listed.

**Admission Requirements**
A candidate for the doctoral program will normally have completed a master's degree in mechanical engineering or a related field and have adequate preparation in areas of science and mathematics fundamental to his or her field of study. In addition, a student enrolled in the master's program may apply to work directly toward the doctoral degree after completing at least 18 credit hours of graduate coursework at Florida Tech with a cumulative grade point average of at least 3.5.

Doctoral applicants should have superior academic records, provide letters of recommendation and take the Graduate Record Examination (GRE) General Test.

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**
The degree of doctor of philosophy is conferred primarily in recognition of creative accomplishment and ability to investigate scientific or engineering problems independently, rather than for completion of a definite course of study. The work should consist of advanced studies and research leading to a significant contribution to the knowledge of a particular problem. A student’s research may have analytical, computational or experimental components, or some combination. Each student is expected to complete an approved program of study beyond that required for a master’s degree, pass the comprehensive written/oral examination, complete a program of significant original research, and prepare and defend a dissertation concerning the research.

The purpose of the comprehensive examination is to cover the student’s major field of study and related fields important to the major field. The examination is given when, in the judgment of the student’s advisory committee, the student has had sufficient preparation in his/her field of study by completing significant coursework in at least two areas of specialization and by initiating doctoral research. The examination is normally taken before the end of the student’s fourth academic semester, as counted from admission into the doctoral program. The written portion of the examination consists of individual examinations given by each member of the advisory committee. These written examinations are intended to cover each of the student’s areas of specialization. The written portion of the comprehensive examination is followed by an oral component administered by the student’s advisory committee. The oral examination provides the advisory committee an opportunity to complete the examinations in each of the student’s specialty areas. Subsequent to completion of both written and oral components of the examination, a dissertation proposal must be submitted to the student’s advisory committee for evaluation. Upon determining that the proposed research is of doctoral quality and that completion is feasible, the student is advanced to candidacy for the doctoral degree.

**Course Work and Dissertation Summary**
Doctoral coursework beyond master’s degree (minimum)......................... 18
Doctoral research and dissertation (minimum)................................. 18
TOTAL MINIMUM BEYOND THE MASTER’S DEGREE......................... 42

General degree requirements are presented in the Academic Overview section.

**Curriculum**
The student’s master’s and doctoral coursework combined should include a minimum of 24 credit hours in mechanical engineering and 9 credit hours in mathematics. The doctoral program of study must be approved by the student’s adviser and the department head. The distribution of these courses should include courses in each of the four areas of specialization, and as a minimum should have the credit distribution given below:

- Major Area of Specialization (including master’s courses) ...................... 18
- Related Areas of Specialization (including master’s courses) .................. 9
- Mathematics (including master’s courses) ........................................ 9

**RESEARCH**
Mechanical and aerospace engineering facilities include laboratories for energy research, fluid mechanics and aerodynamics, combustion and propulsion, metallurgy and solid mechanics, system dynamics and control, instrumentation and applied laser research, computer-aided design and computational research.
Other laboratories around the campus can also be used by mechanical engineering graduate students performing advanced research.

Funded research activities of mechanical and aerospace engineering faculty have recently included studies of efficient heat transfer/insulation mechanisms in building environments, advanced HVAC and fuel cell systems, integration of renewable energy sources into residential and utility applications, computation of radiative transport, computational mechanics with emphasis on nano-devices and damage mechanisms in laminated composite structures, development of experimental techniques for mechanical behavior of advanced materials systems, biomechanics, laser applications in bioengineering, turbulent boundary-layer structure, condition monitoring and fault diagnosis in rotating machinery and turbulent transport of moisture contained in air streams. Other studies have involved combustion in porous media, novel spatial and spherical mechanisms for part-orienting tasks, design and control of mobile robots, response of occupants in automobile collisions, smart composite structures with embedded sensors and optimization of composites. Research projects have been variously supported through grants from NASA, National Science Foundation, Defense Nuclear Agency, Air Force Office of Scientific Research, Edith Bush Charitable Foundation, Florida Solar Energy Center, Florida Space Grant Consortium, Department of Energy and a number of industrial affiliations.

Laboratories include the Robotics and Spatial Systems Laboratory (RASSL); Laser, Optics and Instrumentation Laboratory (LOIL); Fluid Dynamics Laboratory and the Aerospace Structures Laboratory. RASSL is equipped with several industrial robots as well as a state-of-the-art autonomous mobile robot. In LOIL, the current technologies in continuous wave and short-pulse lasers and optics are used to develop new techniques for measuring and characterizing material properties for biomedical and material processing applications. The Fluid Dynamics Laboratory features a low-speed, low-turbulence wind tunnel of open-return type, with a square test section 0.535 m on a side and 1.6 m long. The speed range is from zero to 42 m/s. The mean turbulence level is a few hundredths of one percent at the lowest tunnel speeds. The Aerospace Structures Laboratory features a drop-tower for impact testing of structures and materials. This laboratory also has a shaker table for the vibration testing of structures. There are also ovens, vacuum pumps and other paraphernalia needed for the custom preparation of material specimens from advanced composite materials.

The Human-Centered Design Institute (HCDI) members are faculty, permanent and visiting research scientists and graduate students conducting research in cognitive engineering, advanced interaction media, complexity analysis in human-centered design, life-critical systems, human-centered organization design and management, and modeling and simulation.

See the Institution Overview section of this catalog for further information regarding the Dynamic Systems and Controls Laboratory; the Laser, Optics and Instrumentation Laboratory; and the Robotics and Spatial Systems Laboratory.
College of Psychology and Liberal Arts
Dean Mary Beth Kenkel, Ph.D.

Degree Programs

Applied Behavior Analysis, M.S.
Applied Behavior Analysis and Organizational Behavior Management, M.S.
Applied Psychology, B.A.
Behavior Analysis, Ph.D.
Clinical Psychology, Psy.D.
Communication, B.S.

Military Science, B.S.
Criminal Justice, A.A., B.A.
Forensic Psychology, B.A.

Humanities, B.A.
Prelaw, B.A.

Industrial/Organizational Psychology, M.S., Ph.D.
Liberal Arts, A.A.
Organizational Behavior Management, M.S.
Psychology, B.A., B.S.

Technical and Professional Communication, M.S.

Communication
Forensic Psychology
History
Prelaw
Psychology

Organization

Department of Humanities and Communication

Division of Languages and Linguistics
Military Science Program
School of Psychology

Mission Statement and Overview

The College of Psychology and Liberal Arts includes the Department of Humanities and Communication, the division of languages and linguistics, military science (Army ROTC), and the School of Psychology. The college offers bachelor's degrees in communication, humanities, psychology and forensic psychology, and master's degrees in applied behavior analysis, industrial/organizational psychology, organizational behavior management, and technical and professional communication. Doctoral degrees are awarded in behavior analysis, clinical psychology and industrial/organizational psychology. In addition to these programs offered on campus, the college offers associate's degrees in liberal arts and criminal justice, and bachelor's degrees in applied psychology and criminal justice through Florida Tech University Online.

Courses in foreign languages and linguistics are offered through the department of humanities and communication's languages and linguistics program, as well as an intensive English as a Second Language program for students whose first language is not English.

Financial Assistance

General financial assistance information including assistantships and veterans' benefits is addressed in the Financial Overview section.

Merit scholarships for undergraduate students are dependent on available funding. Contact the College of Psychology and Liberal Arts.

Graduate Admission

For psychology program applicants, the School of Psychology endorses the following resolution of the Council of Graduate Departments of Psychology regarding the offering and accepting of financial aid after April 15:

An acceptance given or left in force after April 15 commits the student not to solicit or accept another offer. Offers made after April 15 must include the provision that the offer is void if acceptance of a previous offer from a department accepting this resolution is in force on that date. These rules are binding on all persons acting on the behalf of the offering institution.

NONDEGREE PROGRAMS

General Studies

Department of Humanities and Communication
Robert A. Taylor, Ph.D., Head

The general studies program provides a common freshman-year curriculum for students planning to major in communication, humanities, psychology or business, but are uncertain about which major to choose. Courses representative of these majors are taken during the freshman year, allowing students to obtain a general understanding of each area of study. All courses listed below are applicable toward degrees in all of these majors.

Students are encouraged to choose a degree program before registering for the third semester of full-time coursework, and must do so within the first 45 credit hours. These criteria are adjusted for transfer students. General studies students are advised by faculty in each of the programs noted above, and are assigned a new adviser in the appropriate academic unit when they choose a degree program. No degree is awarded in general studies.

Admission

Criteria for admission are based on those established for the majors listed above. Details are provided in the sections of this catalog that describe these majors. Transfer students with more than 45 credit hours are normally required to choose a degree program rather than general studies before admission.

Admission to the general studies curriculum allows selection of any of the participating degree programs at any time before completion of 45 credit hours, unless the student has been academically dismissed. No additional admission procedures are required to declare a degree program, except for processing a Change of Major form (available from the office of the registrar and online from www.fit.edu).

</table>
The four-year military science curriculum described below is designed to complement the student’s academic goals of acquiring management principles. Emphasis is placed on the development of leadership traits and skills that are essential to the student's success in the Army, or as a civilian in his or her chosen profession. As such, the ROTC program of instruction cuts across conventional subject boundaries and involves elements of various disciplines that are designed to encourage students to interrelate their learning and to apply that knowledge in reflective thinking, goal seeking and problem solving.

The program is divided into the basic course (Military Science 1 and 2) and the advanced course (Military Science 3 and 4). All military science course grades are included in the student’s grade point average. A student wishing to use a military science course to satisfy a degree requirement should consult “Course Substitutions Authorized for ROTC” at the end of this section.

Florida Tech offers both four-year and two-year ROTC programs. The two-year program is particularly beneficial for students who have transferred to Florida Tech from junior colleges where military science training was not available. Such students are required to complete a basic ROTC course at the five-week Army National Leaders Training Course at Fort Knox, Kentucky. Students may then be enrolled in the advanced course. While attending the Leader’s Training Course, a student receives approximately $700 plus travel expenses to and from camp.

The four-year military science curriculum described below is applicable to both male and female students who meet the required age and physical standards. Students with prior military service or students who were enrolled in a high school JROTC program may be eligible to receive credit for the basic course (MSC 1001 and MSC 1002) and directly enter the advanced program, as determined by the professor of military science.

**ROTC Training Credit**

The military science program chair grants credit for successful completion of Junior ROTC, Leadership Training, U.S. military basic training and in the case of students receiving an alternate entry-level program waiver from the professor of military science. Interested students should contact their adviser. The following credit may be awarded as determined by the program chair:

- **Junior ROTC (1 year), Leadership Training, Basic Training:** MSC 1001 (1), MSC 1002 (1), MSC 1003 (1), MSC 1004 (1)
- **Junior ROTC (2 years), Leadership Training, Basic Training, Alternate Entry-level Program Waiver:** MSC 2001(2), MSC 2002 (2)

*The professor of military science may grant qualified students alternate entry-level program waivers, that are comprised of a pre-set program to compress MSC 1001, MSC 1002, MSC 1003, MSC 1004, MSC 2001 and MSC 2002, and the leadership laboratories.

**ROTC Credits Used for Graduation**

A Florida Tech student who has been admitted to the ROTC program may elect to use one or more military science courses to partially fulfill requirements for graduation in the program in which the student is enrolled. The number of credit hours that can be substituted for other courses in a degree program depends on the particular program.

**Army ROTC Scholarships**

The Army ROTC program awards four-, three- and two-year merit-based scholarships to qualified applicants on a competitive basis. These scholarships provide for full tuition and medical fees annually. An additional scholarship benefit is a designated book allowance of $900. Army scholarship winners and all advanced course cadets receive a tax-free subsistence allowance ranging from $300–500 a month for up to ten months for each year the scholarship is in effect. Scholarships do not pay flight fees.

A student who enrolls at Florida Tech under contract with the U.S. Army as an ROTC scholarship student receives incentives from the university in addition to the benefits paid by the Army. Four-year scholarship winners receive a room and board scholarship from the university, and may qualify for a grant for tuition not covered by the Army. Three-year advanced designees receive 50 percent tuition assistance for the freshman year. Beginning in the sophomore year, three-year advanced designees receive a room and board scholarship, and may qualify for a grant to cover the tuition balance not covered by the ROTC scholarship from the university. Three- and two-year on-campus scholarship recipients will receive incentive packages similar to the above for all years the scholarship is in effect.

A student who transfers from another university to Florida Tech may be eligible for these incentive benefits as determined on a case-by-case basis by the professor of military science.

**Military Science Curriculum**

**Military Science 1:** Covers the history, mission and organization of ROTC and the U.S. Army; basic customs, marksmanship, navigation and small-unit infantry tactics; and leadership development through practical exercises. Academic classes meet one hour per week. Leadership laboratory meets 1.5 hours per week. ROTC credit, four hours (2 hr/sem). Optional activities: Ranger Company,
Color Guard, weekend field exercises and physical training (mandatory for scholarship winners).

**Military Science 2**: Offers a more advanced study of map reading and small-unit infantry tactics, and continued leadership development by placement in leader positions within the cadet organization. Academic classes meet two hours/week. Leadership laboratory meets 1.5 hours per week. ROTC credit, two hours/semester. Optional activities: Ranger Company, Color Guard, additional weekend field exercises and physical training (mandatory for scholarship winners).

**Military Science 3**: Covers operation orders and platoon tactics; weapons, land navigation, military skills, communications and instructional techniques; and the development of leadership through tactical exercises. Academic classes meet three hours per week. Leadership laboratory meets 1.5 hours per week. Physical training meets four hours per week (attendance required). ROTC credit, six hours (3 hrs/sem). Optional activity: Ranger Company.

**Military Science 4**: Covers the conduct of training, ethics, military law and history. Cadet leaders gain practical experience in staff organization and planning while executing the unit’s training program. Academic classes meet three hours per week. Leadership laboratory meets 1.5 hours per week and physical training meets four hours per week (attendance required). ROTC credit, two hours (3 hrs/sem). Optional activity: Ranger Company.

**Military Science 5**: Covers a detailed systems approach to studying and understanding military studies; the functions of military organizations and command structures; the functions of military decision-making; the characteristics, attributes and drivers of new telecommunications technologies and components that shape innovation and technological advancement in the military; the fundamentals of military leadership; and significant historical events and current topics.

**Course Substitutions Authorized for ROTC**
Academic credit is permitted for military science classes as follows.

**Aeronautical Science**

Communication, B.S.
Military Science, B.S.
Humanities, B.A.
Prelaw, B.A.
Technical and Professional Communication, M.S.

Undergraduate Minor Programs
Communication
History
Prelaw

Professors
Randall L. Allford, Ph.D., general linguistics, language education, German, English as a second language.
Gordon M. Patterson, Ph.D., 19th- and 20th-century intellectual history, American history, history of science and technology.
Edmund Skellings, Ph.D., University Professor of Humanities, English, poetry.
Judith B. Strother, Ph.D., business communication, scientific and technical communication, applied linguistics, psycholinguistics, intercultural communication, customer service communication.
Robert A. Taylor, Ph.D., modern American history, American Civil War, Florida history.

Associate Professors
Andrew J. Aberdein, Ph.D., logic and philosophy.
H. Hatfield Edwards, Ph.D., public relations, health communication, communication and social issues.
Lisa Perdigao, Ph.D., American literature, literary theory, cultural studies.
Robert L. Shearer, Ph.D., history of philosophy, existentialism, logic, music history and performance.

Assistant Professors
Gabriella I. Baika, Ph.D., foreign languages, humanities.
Marcia Denius, M.F.A., poetry, creative writing, scriptwriting, women writers.
Jason M. Harris, Ph.D., freshman composition, English literature, folklore.
Lars R. Jones, Ph.D., medieval and renaissance European art, photojournalism, iconography.
John F. Lavelle, Ph.D., freshman composition, American literature, creative writing.
Jo Ann Parla-Palumbo, Ph.D., languages and linguistics.
Theodore G. Petersen, Ph.D., popular culture, literary journalism, civil rights movement, journalism history.
Alan M. Rosiene, Ph.D., medieval rhetoric, science fiction film, literary theory, freshman composition.
Youngju Sohn, Ph.D., strategic communication, public relations.
Angela Tenga, Ph.D., scientific and technical communication, Old and Middle English literature, English, German.
Jamie A. Younkin, Ph.D., music and humanities.
Wanfa Zhang, Ph.D., political science, international relations, Asian studies.

Instructors
Penny Bernard, M.S., languages
Annie Caza, M.A., languages
Zohra Fazal, M.S., communication
Bill Leach, Ph.D., communication
Anna Montoya, M.A., Spanish
Matthew Ruane, M.A., history
Fontaine Wallace, M.Ed., communication

Adjunct Faculty

Professor Emerita
Jane E. Patrick, Ph.D.

Mission Statement
The department provides the foundation on which students build practical skills of writing and critical thinking, intellectual objectivity and analysis. These are preparations not only for a career but also for anyone who wants to write a book or start a corporation, pursue graduate studies or serve as a management consultant.

Florida Tech provides a work environment that is richly diverse, ethnically, linguistically and politically. The goal of the department is to provide a program that succeeds in its commitment to its students, and shows them how to wonder at the genius of great literature in the same way that it shows them how to write proposals or launch a public relations campaign. It must also convince students that careful thinking, meticulous writing and imaginative planning are essential not just for success but for corporate survival, and that all jobs in the 21st century will require solid writing and analytical skills, computer proficiency and intellectual openness.

Fast Track Master’s Program in Technical and Professional Communication
This program allows undergraduate students of any major to complete a master’s degree in technical and professional communication in one year by earning graduate-level credit hours during their senior year, and applying up to six credit hours to both the bachelor’s and master’s degrees. The program is available to undergraduates who have completed a minimum of 35 credit hours at Florida Tech with an earned GPA of at least 3.2, and who have completed at least 95 credit hours toward their undergraduate degree by the time the approved student begins taking graduate-level courses. The credit hours are treated as transfer credit (GPA does not apply) when applied toward the master’s degree. Interested students should consult their department head for more information about this program.

NONDEGREE PROGRAM

Languages and Linguistics

Program Chair
Alan Rosiene, Ph.D.

Organization
Florida Tech’s division of languages and linguistics is operated by the department of humanities and communication. It administers and teaches all foreign language courses offered by the university and provides training in English for students whose home language is not English and who have been admitted into a Florida Tech degree program.
**English Language Proficiency**

English language proficiency is required of all students whose home language is not English and who are taking academic courses at Florida Tech. Evidence of English proficiency in the form of test results from a Test of English as a Foreign Language (TOEFL) can either be submitted to the university before arrival on campus (an Internet-based TOEFL or IELTS) or demonstrated after arrival (paper-based TOEFL).

English proficiency is not required for admission or for the issuance of immigration documents. However, any student whose home language is not English and who enters Florida Tech without first establishing proof of English proficiency with either an Internet-based TOEFL (iBT) or the IELTS, is required to take an official Florida Tech TOEFL (paper-based) before the start of classes. Students whose home language is not English should register with the division of languages and linguistics at check-in for the TOEFL exam and report to the division of languages and linguistics for the examination results before meeting with their academic adviser.

For all academic students (both international and domestic) whose home language is not English and whose command of the English language does not meet the requirements of their academic programs, English language courses at two levels of proficiency are available each semester. These courses are listed in the [Course Descriptions](#) section of this catalog under “English as a Second Language (ESL).”

**Determining Proficiency**

A Florida Tech TOEFL (paper-based), given at the beginning of each semester as a placement instrument determines the incoming student’s competence in English and establishes the most beneficial program of study. Both undergraduate and graduate students whose home language is not English with scores below 550 on the Florida Tech TOEFL, below 79 on the iBT or below 6.5 on IELTS are required to take ESL courses as specified by the program chair. Students who score below 450 on the Florida Tech TOEFL (paper-based) before the start of classes. Students whose home language is not English and who enter Florida Tech without first establishing proof of English proficiency with either an Internet-based TOEFL (iBT) or the IELTS, is required to take an official Florida Tech TOEFL (paper-based) before the start of classes. Students whose home language is not English should register with the division of languages and linguistics at check-in for the TOEFL exam and report to the division of languages and linguistics for the examination results before meeting with their academic adviser.

Students whose home language is not English are considered to have demonstrated English language proficiency if they have done any of the following:

1. Taken an official Florida Tech TOEFL (paper-based) and earned a score of at least 550, or taken an Internet-based TOEFL (iBT) and earned a score of at least 79, or taken an IELTS and earned a score of at least 6.5, no more than two years before attendance at Florida Tech; or
2. Successfully completed ELS 109 taken at an ELS Language Center within two months of their report date at Florida Tech, and successfully completed appropriate ESL courses as determined by the TOEFL score; or
3. Successfully completed a total of 20 semester hours at an accredited, mainland U.S. university or college where English is the language of instruction, including three semester hours of English that qualify as transfer credit for Florida Tech’s Composition and Rhetoric (COM 1101) course; or
4. Earned a bachelor’s or higher degree from an accredited, mainland U.S. university or college where English is the language of instruction; or
5. Attended for three consecutive years, and graduated from, an accredited, mainland U.S. high school where English is the language of instruction; or
6. Obtained an official score of four or higher on either the International Baccalaureate Higher Level Language A examination in English, or the College Board Advanced Placement Program (AP) examination in English Language and Composition.

Students who score 550 or above on the Florida Tech TOEFL (paper-based) may still need to complete certain ESL courses if it is so deemed by their academic adviser. The program chair of languages and linguistics makes the final determination. For more information about the policies and requirements for English language proficiency at Florida Tech, contact the program chair of languages and linguistics in the department of humanities and communication.

**Registering for Academic and ESL Courses**

Students are permitted to begin their academic coursework in conjunction with ESL courses. However, ESL courses take precedence over academic courses. Although these courses are credit bearing (three credit hours per course, three to five days per week), they cannot be applied toward completion of a degree and are not included in GPA calculations. Any student who is taking an ESL course cannot take humanities (HUM), chemistry (CHM), flight (AVF) or introduction to engineering courses.

The program chair of languages and linguistics makes the final determination of what and when ESL courses are to be taken and enforces all English proficiency policies. Any student who accumulates four F’s in ESL courses may be academically dismissed at the direction of the program chair.

International students and students whose home language is not English must have documented proficiency in English (either through submitted writing samples, or TOEFL or placement examinations, or a combination of these) before making the transition from English as a Second Language (ESL) courses to Basic Writing for ESL Students (COM 0100), Basic Writing Skills (COM 0110) or Composition and Rhetoric (COM 1101).

**Applying for Graduate Assistantships**

International students are eligible for graduate assistantships in some academic units. In addition to specific academic unit requirements, any student whose home language is not English, whether or not the student has graduated from an English speaking, post-secondary institution, must submit a score of at least 600 on the Florida Tech TOEFL (at least 100 on the iBT) and a score of at least 45 on the Test of Spoken English (TSE) to be considered for a teaching assistantship. A TOEFL score of at least 550 must be submitted for a research assistantship.
UNDERGRADUATE DEGREE PROGRAMS

**Humanities, B.A.**

**Major Code:** 7185  
**Degree Awarded:** Bachelor of Arts  
**Age Restriction:** N  
**Admission status:** undergraduate  
**Delivery Mode/s:** classroom only  
**Location/s:** main campus

The Bachelor of Arts degree program in humanities is an interdisciplinary program of liberal studies with an emphasis on literature, history, philosophy and the fine arts. As a study of the thoughts, actions and values of human beings, along with a comprehensive background in science, mathematics and computers, the humanities major has broad applicability. As a result of the ample allotment of electives, students may adapt the program to individual needs and interests. The major prepares graduates for a wide variety of careers, including teaching, law, government service, the military and editing. Students wishing to pursue graduate study will be prepared to enter programs in their respective areas of concentration, such as history, literature, philosophy or law.

**Degree Requirements**

Candidates for a Bachelor of Arts in Humanities require a total of 121 credit hours for graduation as follows.

**FALL**

- COM 1101 Composition and Rhetoric ................................................................. 3
- COM 1102 Writing about Literature ................................................................. 3
- COM xxx Business and Professional Writing or Speech .......................... 3
- HUM 2051 Civilization 1 ................................................................................. 3
- HUM 2052 Civilization 2 ................................................................................. 3

**SPRING**

- Foreign Language (12 credit hours from four courses in the same language)
  - Concentration (12 credit hours)
    - 2000-level (and higher) courses from one of the following areas: literature, history or philosophy. The senior capstone project consists of original research resulting in a substantial written work about a significant issue in the humanities.
  - Humanities (27 credit hours)
    - Including at least three credit hours in each of the following areas:
      - art, music, history, literature and philosophy.
- Mathematics (6 credit hours)
- Physical or Life Sciences (6 credit hours)
- Computer Science (3 credit hours)
- Liberal Arts Electives (24 credit hours)
- Social Science Elective (3 credit hours)
- Free Electives (12 credit hours)

**Sophomore Year**

**FALL**

- Concentration ........................................................................................................... 3
- Free Elective ............................................................................................................ 3
- Humanities Electives ............................................................................................ 6
- Liberal Arts Elective .............................................................................................. 3

**SPRING**

- Concentration ........................................................................................................... 3

**Total Credits Required......................................................................................... 121

**Humanities – Prelaw, B.A.**

**Major Code:** 7186  
**Degree Awarded:** Bachelor of Arts  
**Age Restriction:** N  
**Admission status:** undergraduate  
**Delivery Mode/s:** classroom only  
**Location/s:** main campus

The Bachelor of Arts in Humanities – Prelaw offers the courses needed to meet the entrance requirements of law schools. Undergraduates selecting this degree program are able to gain a thorough grounding in a variety of academic disciplines applicable to graduate study in law. Students work with the prelaw adviser to select a course of study customized for their own needs and interests. A student contemplating admission to a law school should consult the prelaw adviser early in the program.

**Degree Requirements**

Candidates for the Bachelor of Arts in Humanities – Prelaw Option require a minimum of 122 credit hours as outlined in the following requirements and sample curriculum. Any program plan selected in consultation with the student’s adviser must include QEP-designated research in an agreed area to begin during the spring term of the junior year. Students must complete a minimum of 39 credit hours of advanced coursework (3xxx-level and above) chosen from upper-level courses in humanities or psychology.
### Core Requirements
- ASC 1000 University Experience ........................................ 1

- **Delivery Mode:** classroom only
- **Location:** main campus

### Program Chair
H. Hatfield Edwards, Ph.D.

The major in communication prepares graduates to meet today’s ever-growing demand for skilled communicators who have specialized backgrounds in strategic communication with a focus on business, or science and technology. Coursework emphasizing business, or science and engineering augments a strong foundation in applied and conceptual courses that emphasize written and oral communication, theoretical communication and visual communication. Graduates of this program are able to create effective communication analyses and campaigns, write for a broad range of audiences about science and technology, and use multiple media platforms to effectively and ethically communicate to diverse publics.

Graduates specializing in strategic communication—business typically find employment in public relations, marketing, publications research, advertising, copywriting, editing, training and development, public information or customer relations. Graduates specializing in strategic communication—science and technology are typically employed as writers and editors for technical or scientific publications or organizations, documentation designers, technical publications specialists, instructional designers or proposal writers.
Degree Requirements

Candidates for the Bachelor of Science in Communication require a total of 121 credit hours for graduation. On reaching the junior year, candidates must choose an area of concentration and include 21 credit hours of specialized coursework. The composition of the 121-credit program must correspond to the following distribution of required and elective courses.

ASC 1000 University Experience .......................................................... 1
BUS 2601 Legal and Social Environments of Business ................. 3

Communication—Military Science, B.S.

Major Code: 7184  Degree Awarded: Bachelor of Science
Age Restriction: N  Admission status: undergraduate
Delivery Mode: classroom only  Location: main campus

The military science option prepares Florida Tech Army ROTC cadets to serve as commissioned officers in the United States Army, Army Reserve and Army National Guard. Technical, scientific and military studies are incorporated into the curriculum with emphasis on applied leadership and problem-solving skills. Current freshmen and sophomores between their second and third years who have no prior military service and who seek an Army ROTC scholarship may attend the 32-day Leader's Training Course that provides basic military and problem-solving skills combined with physical training. Students incur no service commitment on completion of this course.

Degree Requirements

The bachelor's degree in communication, military science option, is earned by satisfying the degree requirements listed for the bachelor's degree in communication and completing the advanced military science program as described below and previously in this section under "Military Science." All military science (MSC) courses taken are applicable to this degree, with up to 18 credit hours applied toward degree requirements including 12 free elective credits and six humanities elective credit hours.

Students are strongly encouraged to take Special Topics in History (HUM 3385) as a humanities elective, which counts toward both the military science and humanities requirements.

On reaching the junior year, candidates must choose an area of concentration and include 21 credit hours of specialized coursework.

COM 3440 Public Relations
COM 3485 Special Topics in Theoretical Communication
COM 3585 Special Topics in Visual Communication
COM 4026 Publishing and the Internet
COM 4085 Communication Technology: Issues and Applications
COM 4424 Advanced Business and Professional Communication

Note: At least nine (9) credit hours of the communication minor must be taken in the Florida Tech Department of Humanities and Communication.

**History** (19 credit hours)

**Minor Code:** 6186 **Degree Awarded:** none
**Age Restriction:** N **Admission status:** undergraduate
**Delivery Mode/s:** classroom only **Location/s:** main campus

COM 2012 Research Sources and Systems *
HUM 3331 American History: Pre-Columbian to Civil War Era
HUM 3332 American History: From Reconstruction to the Present
HUM 3351 History of Science and Technology: Ancient and Medieval
HUM 3352 History of Science and Technology: Renaissance to Present

Six credit hours from the following:
HUM 1015 Mythology
HUM 2085 Critical Approaches to Humanities and Social Sciences
HUM 2141 World Art History 1: Pre-History to Early Global Awareness
HUM 2480 Introduction to Political Science
HUM 3026 The Civilization of Islam
HUM 3385 Special Topics in History
HUM 3521 World Religions

*Research Sources and Systems is a one credit-hour course.

**PreLaw** (19 credit hours)

**Minor Code:** 6187 **Degree Awarded:** none
**Age Restriction:** N **Admission status:** undergraduate
**Delivery Mode/s:** classroom only **Location/s:** main campus

COM 2012 Research Sources and Systems *
COM 2224 Business and Professional Writing
HUM 2401 Introduction to Law
HUM 2510 Logic
HUM 3401 Constitutional Law 1 or HUM 3402 Constitutional Law 2

Six credit hours from the following:
BUS 2601 Legal and Social Environments of Business
COM 2370 Speech
COM 3070 Professional Communication for Executives
HUM 2385 Special Topics in World History
HUM 2480 Introduction to Political Science
HUM 3385 Special Topics in History
HUM 3551 Survey of Ancient and Medieval Philosophy
HUM 3552 Survey of Modern and Contemporary Philosophy
HUM 3585 Special Topics in Philosophy
PSY 2551 Survey of Forensic Psychology

* Research Sources and Systems is a one credit-hour course.

**Note:** PreLaw minor not available to humanities majors. The Humanities–Prelaw degree program may be a more appropriate option.

**GRADUATE DEGREE PROGRAM**

**Technical and Professional Communication, M.S.**

**Major Code:** 5180 **Degree Awarded:** Master of Science
**Age Restriction:** N **Admission status:** graduate
**Delivery Mode/s:** classroom only **Location/s:** main campus
**Admission Materials:** 2 letters of recommendation, GRE

**Program Chair**
Judith B. Strother, Ph.D.

The master of science program in technical and professional communication stresses the development of practical, career-oriented written, oral and analytical skills necessary for success in business, industry and management, and in a wide variety of technical and professional contexts. The degree program...
combines theory and document analysis with practice in generating written documents in a wide variety of forms and styles, from research-based papers and academic articles to formal reports and proposals; revising and editing technical, scientific and managerial documents for a variety of professional purposes; designing and publishing professional-quality documents; and problem solving and communication-oriented decision making in collaborative team environments.

**Admission Requirements**

An applicant should have a bachelor's degree (B.A., B.S. or B.B.A.) prior to admission. Because of the interdisciplinary nature of this graduate program, students with undergraduate degrees in a wide variety of fields (e.g., biological sciences, business, communication, computer science, engineering, English, journalism, management, psychology, and physical and social sciences) are encouraged to apply.

Applicants should submit official transcripts of all undergraduate and graduate work undertaken previously; two letters of recommendation from academic or professional sources; GRE Verbal and Analytical test scores totaling at least 1,000; and a discursive writing sample (e.g., an academic research or critical paper, professional proposal, manual, or business or technical report).

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**

The program consists of 36 credit hours of approved graduate coursework, including both required courses and electives tailored to meet the student's professional needs. Students are required to enroll in 15 credit hours of core courses, 12 credit hours of advanced coursework in technical and professional communication, and six credit hours of elective courses to complement and broaden their professional skills. To complete the program, a student either produces and defends a design project or thesis, or takes an additional three credit hours of coursework and passes a final program examination.

**Curriculum**

The core curriculum includes coursework in theoretical and applied managerial, scientific and technical discourse; design and production of different communication products; research and methods of analysis; and communication.

The core curriculum is enriched with elective coursework. Master's students are encouraged to select elective sequences to pursue intercultural areas of particular research or professional interest.

**Core Courses** *(15 credit hours)*

</tr>
</tbody>
</table>

**Electives** *(6 credit hours)*

In addition, six credit hours of elective coursework must be selected by students in the master's program.

**Nonthesis Option**

A student may choose to complete 36 credit hours of coursework without completing a thesis or design project. In that case, the student must take a final program examination no earlier than the last full semester in which the student is registered for courses.

**Thesis/Design Project**

In lieu of three credit hours of coursework, the student may choose to complete either a traditional, research-based thesis or a design project (an extended problem-solving project exploring and resolving a designated situation in business, industry, government or education).

A thesis or design project proposal must be approved in advance by the student's committee. A defense of the thesis or the design project before the student's faculty committee is required. A unanimous vote of the student's committee is necessary for acceptance of the thesis or design project.

**Graduate Certificate in Marketing Communication**

The graduate certificate in marketing communication is a four-course program that gives the skills necessary to expand areas of responsibility and/or move into positions of strategic leadership. The program draws courses from the technical and professional communication program, including Seminar in Marketing Communication (COM 5252), Customer Service Communication (COM 5253), Public Relations (COM 5250) and Marketing Management (BUS 5470), or courses designed to build on students' backgrounds. Students who complete the certificate can choose to continue in the Technical and Professional Communication graduate program at Florida Tech; these courses can be transferred toward the master's degree.

Admission requirements include a bachelor's degree from an accredited institution with a 3.0 GPA and two letters of recommendation.

Psychology

Professors

William K. Gahreynia Jr., Ph.D., cross-cultural differences in group interaction, Chinese culture, social class and modernization, international student adjustment, indigenous psychologies, political psychology, sex.
Richard L. Griffith, Ph.D., response distortion on noncognitive selection procedures, advanced measurement issues, organizational innovation, cognitive processes of work teams.
Arthur Gutman, Ph.D., personnel law, program evaluation, applied statistics, personnel psychology, research design.
Thomas H. Harrell, Ph.D., psychometrics and computerized psychological assessment, use of MMPI-2 in clinical evaluation, cognitive-behavioral approaches to assessment and therapy, adaptation to agy.
Mary Beth Kenkel, Ph.D., clinical/community psychology, rural mental health, gender issues, telehealth, prevention, future of professional psychology.
Frank M. Webbe, Ph.D., sport psychology, neurobehavioral correlates of athletic head trauma, neuropsychology and aging.
David A. Wilder, Ph.D., BCBA, functional assessment and intervention with developmentally disabled children, organizational behavior management.

Associate Professors

Gisela S. Bahr, Ph.D., mental model and information visualization in distributed team environments and usability methodology.
Patrick D. Converse, Ph.D., self-regulation, cognitive ability, ability requirements of occupations, personality measurement.
Richard T. Elmore Jr., Ph.D., marital and sex therapy, clinical hypnosis, traumatology, occupational health psychology.
Philip D. Farber, Ph.D., psychological assessment, clinical training issues, psychopathology, existential/humanistic approaches to therapy.
Mark T. Harvey, Ph.D., BCBA, developmental disabilities, psychopathology, self-injurious behavior, behavior analysis in educational settings.
Maria J. Lavooy, Ph.D., diversity, confronting behavior, scholarship of teaching and learning.
José Martinez-Díaz, Ph.D., BCBA-D, professional/legal issues, practitioner training/supervision, management/administration, instructional technology, conceptual/philosophical issues, verbal behavior, behavioral treatment.

antecedent strategies, in-home behavioral programs for children, teaching language to children with autism and related disabilities, radical behaviorism.
Barbara Paulillo, Psy.D., community psychological services.
Lisa Steelman, Ph.D., job performance feedback processes, performance appraisal, multivariate feedback, organizational survey research, employee commitment and engagement.
Fran J. Warkomski, Ed.D., BCBA, school-based student improvement, special education, performance targets.

Assistant Professors

Alison Betz, Ph.D., BCBA, autism, severe problem behavior, verbal behavior, functional analysis.
Elbert Q. Blakely, Ph.D., BCBA, autism, verbal behavior, rule-governed behavior, self management, treatment of severe self-injurious and aggressive behaviors, database design, behavioral pharmacology.
Guy Bruce, Ed.D., design/testing of behavior analytic tools, instructional design, learning efficiency.
Felipa T. Chavez, Ph.D., racial/ethnic identity, substance abuse/addictions, child abuse and neglect.
Ivy Chong, Ph.D., BCBA-D, analysis and treatment of autism spectrum disorders.
Vanessa A. Edkins, Ph.D., juror decision-making, racism in the law, attitudes toward the legal system.
J. Chris Froncillo, Ph.D., English literature, online education.
Julie S. Gross, Ph.D., forensic psychology, sex offender treatment, personality, criminal behavior.
Celeste R. Harvey, Ph.D., BCBA, developmental disabilities, psychopathology, self-injurious behavior, intensive early behavioral intervention in autism and other developmental disabilities; behavior analysis in educational settings, applied behavior analysis.
Todd Poch, Psy.D., clinical forensic psychology, expert testimony, posttraumatic stress disorders.
Erin M. Richard, Ph.D., nature of emotional display rules, emotion regulation in the workplace, individual difference in workplace motivation.
Robyn E. Tapley, Psy.D., clinical issues in the student population, career counseling, psychological/psychoeducational assessment, clinical training/supervision, professional ethics.
Kristi S. Van Sickie, Psy.D., health psychology, psychologist early career issues.
Paula Wolfreich, Ph.D., child maltreatment investigations/treatment models, infant/preschool assessment, early intervention for behavior/developmental disorders, clinical training/supervision.

Instructors

Marshall A. Jones, M.S., Director, Forensic Psychology Program
Joshua Pritchard, M.S.
James K. Reynolds, M.P.A.

Adjunct Faculty

M. Stallo, M.A.; E. Vargas, Ph.D.

Professors Emerita

Juanita N. Baker, Ph.D.; Carol L. Philpot, Psy.D.

Professors Emeriti

Charles D. Corman, Ph.D.; Thomas H. Peake, Ph.D.

Overview

The psychology building, containing offices, classrooms, human research areas, observation and treatment rooms, computer facilities, a conference room, a faculty/staff/student lounge and a student reading room, is located on Florida Tech’s main campus, as are the Counseling and Psychological Services Center (CAPS) and
the Community Psychological Services of Florida Tech (CPS). The East Central Florida Memory Clinic (ECFMC) is also located in Melbourne, near Holmes Regional Medical Center.

The school staffs the CPS, the Center for Professional Services, Center for Traumatology Studies, ECFMC and the Family Learning Program (FLP). CPS provides psychological services to the local community. ECFMC provides memory screenings as well as neuropsychological assessment and counseling. The ECFMC and FLP programs are state supported.

The doctor of psychology (Psy.D.) program in clinical psychology is fully accredited by the American Psychological Association and is listed as a designated doctoral program in psychology by the National Register of Health Service Providers in Psychology. For information on APA accreditation please contact: Office of Program Consultation and Accreditation, 750 First Street NE, Washington, D.C. 20002-4212, phone (202) 336-5979.

The following statement is specific to the agreement assumed between a prospective psychology graduate student and the School of Psychology. A resolution adopted by the Council of Graduate Schools in the United States, and supported by 362 universities and colleges, reads as follows:

Acceptance of an offer of financial aid (such as graduate scholarship, fellowship, traineeship or assistantship) for the next academic year by an actual or prospective graduate student completes an agreement that both student and graduate school expect to honor. In those instances in which the student accepts the offer before April 15 and subsequently desires to withdraw, the student may submit in writing a resignation of the appointment at any time through April 15. However, an acceptance given or left in force after April 15 commits the student not to accept another offer without first obtaining a written release from the institution to which a commitment has been made. Similarly, an offer by an institution after April 15 is conditional on presentation by the student of the written release from any previously accepted offer. It is further agreed by the institutions and organizations subscribing to the above Resolution that a copy of this Resolution should accompany every scholarship, fellowship, traineeship and assistantship offer.

**Psychology Degree Programs and the Multicultural Commitment**

The School of Psychology is committed to providing students with information and training that is not restricted to one cultural or national tradition. Exposure to information on the theory and practice of psychology in different cultures and with different ethnic and cultural minorities make graduates sensitive to cultural, national and ethnic differences, whether encountered at home or abroad.

**Intensive Classroom Courses**

These courses are usually one credit hour and are taught by nationally known members of our visiting and adjunct faculty. The format of an intensive course is as follows. Each registered student is given a syllabus that includes reading and report assignments. Several weeks into the term, the class meets formally with the professor for one, two or three days. Papers or tests can be given during this time, and papers and projects are usually assigned for the remaining weeks of the term. All assignments are due by the end of the semester. This format allows our students to gain exposure to distinguished psychologists from throughout the world. Generally, one of these courses is available each semester.

**Academic Dismissal for Graduate Students**

Students will be dismissed from further graduate study under the following circumstances:

1. A grade point average below 3.0 at any stage of the doctoral program.
2. Two or more grades of D or F.
3. Unsatisfactory grades for nine credit hours of internship.
4. Nonadmission to doctoral candidacy as defined under “Degree Requirements.”
5. Failure to abide by the Ethical Principles of Psychologists and Code of Ethics of the American Psychological Association.
6. Hampering the academic efforts of other students.
7. Failure to maintain satisfactory progress in coursework and/or research, regardless of grade point average.
8. Violation of the legal and ethical standards of the university, including, but not limited to, cheating, plagiarism, knowingly furnishing false information to the university, or forging, altering or misusing university documents or academic credentials.
9. Failure to demonstrate adequately those personal and interpersonal skills and attributes deemed suitable for the profession, as delineated in the psychology graduate student handbook.

The Academic Overview section presents information concerning dismissal and the rights of the student to appeal dismissal decisions.

**Fast Track Master’s Program for School of Psychology Students**

This program allows undergraduate students currently enrolled in the School of Psychology to complete a master’s degree program in one year by earning graduate-level credit hours during their senior year, and applying up to six credit hours to both the bachelor’s and master’s degrees. The program is available to undergraduates who have completed a minimum of 31 credit hours at Florida Tech with an earned GPA of at least 3.4, and who have completed at least 84 credit hours toward their undergraduate degree by the time the approved student begins taking graduate-level courses. The credit hours are treated as transfer credit (GPA does not apply) when applied toward the master’s degree. Interested students should consult the School of Psychology for more information about this program.

**Psychology Honors Program**

Academically gifted, highly motivated students may participate in the department’s honors program. Students who plan to seek graduate degrees are strongly advised to consider this program.

The psychology honors program is available to juniors enrolled in all undergraduate psychology programs (B.A., B.S., psychology; B.A., forensic psychology). The honors program includes six credit hours of Psychology Honors Thesis (PSY 4515) taken in place of the internship (PSY 3999, PSY 4000, PSY 4001). Students must also complete a minimum of four credits of the Psychology Honors Seminar (PSY 4590), usually taken in place of lower-level courses in the concentration area or in place of free electives. Only honors students may write a thesis.
Admission Requirements

Prospective honors students must have reached their junior year. Applicants should have completed a minimum of 12 hours of psychology (PSY, PSF) courses with a GPA of 3.5 in those courses and a minimum overall GPA of 3.2. These courses may be taken at Florida Tech or transferred from another four-year university. Community college courses will not be included in the GPA calculation.

To earn the honors distinction, students must successfully complete the program with a graduating GPA of 3.5 in psychology and an overall GPA of 3.2. Only courses taken at Florida Tech will be included in this calculation. A minimum average GPA of 3.0 in PSY 4590 is required. Successful students will receive a certificate indicating completion of the requirements.

Required Courses

PSY 4515 Psychology Honors Thesis .................................................. 3
PSY 4590 Psychology Honors Seminar (4 credit hours required) ........ 1

Note: All honors seminars may be repeated for a total of four credits. The thesis may be repeated for a total of six credits. A maximum of 17 credit hours may be applied to the psychology honors program.

 Forensic Psychology, B.A. ............................................ 3

 Major Code: 7146 Degree Awarded: Bachelor of Arts
 Age Restriction: N Admission status: undergraduate
 Delivery Mode/s: classroom only Location/s: main campus

 Program Chair
 Marshall A. Jones, M.S.

 The Bachelor of Arts degree program in forensic psychology is a unique program designed to provide knowledge and skills in preparation for careers in several areas of criminal justice in the context of a firm foundation in basic psychology. Graduates of this program can pursue careers in criminal justice professions, such as crime analysts, police or probation officers and victim advocates, and in nonprofit and social service agencies that coordinate efforts with legal/judicial systems, such as domestic violence shelters and victim's rights groups. Some graduates may choose...
to pursue graduate study in criminal justice, forensic psychology, criminology or law.

The forensic psychology program emphasizes skills in crime analysis (tracking patterns and social correlates of criminal activity), crime prevention, and community liaison work among legal, law enforcement and social service agencies. Statistical analysis, program development and program evaluation are some of the competencies students are expected to acquire. Students in this program perform an internship in a criminal justice organization.

Degree Requirements
Candidates for a Bachelor of Arts in Forensic Psychology must successfully complete 120 credit hours as indicated in the suggested curriculum below.

Restricted Electives
The Restricted Elective in a foreign language requires two semesters of a foreign language other than a student’s home language. PSY and PSF courses other than PSY 2444 cannot be used as the Social Science Elective. PSF 3511, PSF 3512, PSF 4515 (if different topic is chosen), PSF 4551 and PSF 4511 may be used as restricted electives (PSF), if not used in the theory and practice, or research and applications categories. Communication Electives may be satisfied by any COM 2xx, 3xx or 4xx courses, foreign languages or linguistics.

Psychology, B.A.

Major Code: 7144 Degree Awarded: Bachelor of Arts
Age Restriction: N Admission status: undergraduate
Delivery Mode/s: classroom only Location/s: main campus

Program Chair
Marshall A. Jones, M.S.

The bachelor’s programs in psychology provide both a solid basis for graduate training in all areas of psychology, and a liberal arts and sciences education to students planning other careers or professions, such as law or business.

The B.A. degree is designed for students whose interests are primarily in the social sciences and humanities. Students consult with their faculty advisers to select the degree program most appropriate to their interests and goals.

Degree Requirements
Candidates for a Bachelor of Arts in Psychology must successfully complete 120 credit hours.

The undergraduate psychology degree programs are designed to allow students to customize their coursework to meet their specific interests and needs. Coursework within the psychology major includes a 29-hour psychology core and an additional 21-hour psychology concentration that includes courses in psychology and other areas that are deemed appropriate to the students’ intellec-
tual goals and interests in psychology. The concentration must be approved by the undergraduate program chair.

**Restricted Electives**
The Restricted Elective in a foreign language requires two semesters of a foreign language other than a student’s home language. No courses with the prefix PSY or PSF, other than PSY 2444, can be used as the Social Science Elective. Life Science Electives include biology, ecology and EDS 1032. Physical Science Electives include chemistry, geology, meteorology, physics, space sciences and EDS 1031. Communication Electives may be satisfied by any COM 2000-level or above courses, foreign languages or linguistics.

Psychology bases courses and a list of concentrations follow the undergraduate psychology program plans in this section.

Courses are offered in the department to facilitate several concentrations: animal learning and behavior, clinical/counseling psychology and applied behavior analysis, cognition–perception, industrial/organizational psychology, neuropsychology, social–cultural psychology and sport psychology. Students may also design their own concentrations appropriate to pursuing postgraduate education in law, medical fields, business and the experimental fields of psychology. Students are encouraged to pursue minors in other disciplines, such as business administration, communication or biology.

**Psychology, B.S.**

- **Major Code:** 7141
- **Degree Awarded:** Bachelor of Science
- **Age Restriction:** N
- **Delivery Mode:** Classroom only
- **Admission status:** Undergraduate
- **Location:** Main campus

**Program Chair**

Marshall A. Jones, M.S.

The B.S. degree is designed for students oriented toward the natural sciences and mathematics. Students consult with their faculty advisers to select the degree program most appropriate to their interests and goals.

**Degree Requirements**

Candidates for a Bachelor of Science in Psychology must successfully complete 120 credit hours as indicated in the suggested curriculum below. No courses with the prefix PSY or PSF, other than PSY 2444, can be used as the Social Science Elective. Technical Electives exclude mathematics courses below the 2000 level.

The undergraduate psychology degree programs are designed to allow students to customize their coursework to meet their specific interests and needs. Coursework within the psychology major includes a 29-hour psychology core and an additional 21-hour psychology concentration that includes courses in psychology and other areas that are deemed appropriate to the students' intellectual goals and interests in psychology. The concentration must be approved by the undergraduate program chair.

Psychology bases courses and a list of concentrations follow the undergraduate psychology program plans in this section.

Courses are offered in the department to facilitate several concentrations: animal learning and behavior, clinical/counseling psychology and applied behavior analysis, cognition–perception, industrial/organizational psychology, neuropsychology, social–cultural psychology and sport psychology. Students may also design their own concentrations appropriate to pursuing postgraduate education in law, medical fields, business and the experimental fields of psychology. Students are encouraged to pursue minors in other disciplines, such as business administration, communication or biology.

Concentrations and Suggested Courses

Students who are particularly interested in a specialized area of psychology have the option to choose one of the following concentrations:

Animal learning and behavior: Students interested in seeking postgraduate training at an appropriate facility to pursue a career in animal behavior, such as training marine mammals, should take Biological Discovery 1 and 2 (BIO 1010, BIO 1020), and a combination of psychology and biology courses in the areas of learning and behavior analysis, anatomy, zoology, ecology and the biology of marine mammals and other vertebrates. Scuba and CPR certifications are recommended. An internship in an animal training facility should be performed. Most students in this concentration also add a minor in biology.

Clinical/counseling psychology and applied behavior analysis: Students interested in pursuing postgraduate study in clinical, counseling or school psychology, or in obtaining employment in a mental health or social service agency after graduation should study in areas that will familiarize them with these occupations and build basic skills. Such areas of study include substance abuse, abnormal psychology, clinical psychology, professional ethics, assessment techniques and applied behavior analysis. Coursework in behavior analysis can lead to certification as a board-certified associate behavior analyst in the state of Florida after completion of other requirements and a certification examination.

Industrial/organizational psychology: Students who plan to enter business directly after graduation, apply to an MBA program or apply for graduate programs in personnel or industrial/organizational psychology should select courses in psychology and business that will help define their interests, prepare them for graduate school admission or develop skills. Some areas of study useful in this regard include industrial/organizational psychology, business law, management, human resource management, organizational behavior and substance abuse. Students who choose this concentration should consider adding a minor in business administration. A minor in business is encouraged.

Sport psychology: Students looking forward to graduate programs in sport psychology and related areas, or careers in coaching or training will take courses that are foundational to these pursuits, such as physiological psychology, leadership, group behavior and sport psychology. For those interested in working in secondary education, a minor in education is encouraged.

Self-designed concentrations: Students may develop their own concentration in consultation with their adviser. Common student-developed concentrations include neuropsychology, experimental cognition and social-cultural psychology.

MINOR PROGRAMS

Minors in psychology and forensic psychology are offered through the School of Psychology. A complete policy statement regarding minors can be found in the Academic Overview section. Information about current minor offerings is available through the individual colleges/departments.

Degree Programs—College of Psychology and Liberal Arts 155
The graduate program in applied behavior analysis is fully accredited by the Association for Behavior Analysis International. The Behavior Analyst Certification Board Inc.® (BACB®) is the only credentialing organization for the discipline. The BACB has approved the Florida Tech behavior analysis core course sequence, which is part of all our degree programs, as meeting the coursework requirements for eligibility to take the BCBA examination. In addition, The BACB has approved Intensive Practical Training in ABA (BEH 5250) as meeting the intensive practicum requirements for eligibility to take the BCBA examination when taken for a total of 12 credits over the course of three terms. Florida Tech’s degree programs in ABA, and ABA and OBM provide our students with all three requirements to sit for the BCBA examination immediately upon graduation.

Applied behavior analysis (ABA) is the design, implementation and evaluation of environmental modifications to produce socially significant improvements in behavior. ABA includes the use of direct observation, measurement and functional analysis of the relations between environment and behavior. Based on the findings of descriptive and functional analyses, ABA uses antecedents and consequences to produce practical change. ABA is based on sound scientific principles and has a solid research foundation that proves its effectiveness. ABA is based on the belief that an individual’s behavior is determined by past and current environmental events in conjunction with organic variables such as genetics. Thus, it focuses on explaining behavior in terms of external events (that can be manipulated) rather than internal constructs (that are beyond our control).

Applied behavior analysts may specialize in clinical applications (e.g., developmental disabilities, mental health and traumatic brain injury), educational applications (e.g., learning disabilities, and designing and evaluating instructional technology), health and fitness, and other areas. They typically spend more time in the problem environment than in their offices. Behavior plans are implemented in the settings where behavior problems occur, rather than the client attending sessions at an office.

Graduates are encouraged to apply for admission into the Ph.D. program in behavior analysis. They may apply and enroll in the APA-accredited Psy.D. clinical psychology program, combining both degrees. The ABA program is offered both on the main campus in Melbourne and in Orlando, Florida. Classes are primarily offered at the Orlando campus on Friday afternoons and weekends, while the main campus program offers most of its classes only on weekdays. Regardless of location, full-time students typically complete the program in four regular semesters plus the intervening summer. The organizational behavior management and the applied behavior analysis and organizational behavior management graduate degree programs are only offered at the main campus in Melbourne.

The ABA degree program provides coursework and practical experience for those who plan to work as behavior analytic practitioners or consultants in community-based and residential programs. Graduates will conduct functional assessments and functional analyses.
Admission Requirements

An applicant should hold a bachelor's degree in psychology, education or other related fields, although graduates from other fields are encouraged to apply. An applicant should have a grade point average of 3.0 (B) or higher. An applicant should submit an application form, the provided supplemental form and the graduate application fee. Applicants should submit a statement of career objectives, a résumé, three letters of recommendation and Graduate Record Examination General Test scores. In addition, official transcripts of all undergraduate and graduate courses attempted must be submitted. All applications should be submitted by February 15, but will be accepted throughout the year. Pre-admission visits to the campus and conferences with faculty and students are strongly encouraged.

A student without a bachelor's degree in psychology may be required to complete up to nine credit hours of psychology coursework at the undergraduate level before registering for graduate-level courses. A student who has not completed a course either in basic principles of learning (or conditioning), basic principles of behavior, or an introductory course in behavior analysis or the equivalent may not be able to register for ABA core classes until such a prerequisite is completed. A student who has not completed a physiological psychology course or the equivalent may not enroll in either PSY 5105 or PSY 5511. These courses are in addition to the credits required for a degree. A student with no previous behavior analysis-related experience may be required to obtain such experience prior to enrolling.

Degree Requirements

A minimum of 48 semester credit hours is required. Requirements include completing the behavior analysis core curriculum (16 credit hours) with a grade of B or better in each core course, additional coursework related to clinical and educational applications of ABA, intensive practical training (12 credit hours), either a capstone project or a thesis, and a final program examination. The final program examination for all students consists of a multiple-choice examination simulating the Behavior Analyst Certification Board Inc. certification examination at the behavior analyst (BCBA) level. Typically, the final program examination will be administered toward the end of the student's final semester of residency.

### Degree Programs—College of Psychology and Liberal Arts

---
Applied Behavior Analysis and Organizational Behavior Management, M.S.

Major Code: 8148  Degree Awarded: Master of Science
Age Restriction: N  Admission status: graduate
Delivery Mode/s: classroom only  Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Program Chair
Jose A. Martinez-Diaz, Ph.D., BCBA-D

The intensive double degree of ABA and OBM provides graduates with the skills and credentials to work in clinical or human service settings, and in business and industry. It also prepares graduates to work as consultants or in managerial or administrative positions. This degree program is only offered on the main campus in Melbourne.

Degree Requirements
A minimum of 57 credit hours is required for this program. Requirements include completing the behavior analysis core curriculum (16 credit hours) with a grade of B or better in each core course; additional coursework related to clinical and education applications of applied behavior analysis; additional coursework related to organizational behavior management; intensive practical training in both areas (16 credit hours); a capstone project in each of the areas; and a final program examination. The final program examination for all students consists of a multiple-choice examination simulating the Behavior Analyst Certification Board’s Certification Examination at the behavior analyst (BABA®) level. Typically, the final program examination will be administered toward the end of the student’s final semester or residency.

Curriculum
Behavior Analysis Core (16 credit hours)

Applied Behavior Analysis Clinical Core (16 credit hours)

Organizational Behavior Management Core (13 credit hours)

Business Management (3 credit hours)

Foundations of Bio-Psychology (6 credit hours)

Industrial/Organizational Psychology (3 credit hours)

Note: With adviser and program chair approval, six credit hours of thesis may be substituted for BEH 5290 and BEH 5490.

Typical Program Plan

Industrial/Organizational Psychology, M.S.

Major Code: 8145  Degree Awarded: Master of Science
Age Restriction: N  Admission status: graduate
Delivery Mode/s: classroom only  Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Program Chair
Lisa Steelman, Ph.D.

Industrial/organizational (I/O) psychology is concerned with applying professional skills and focusing scientific research on problems people encounter at work.

The goal of the master’s program is to offer a two-year terminal degree that prepares master’s-level professionals to work within the broad human resource function in organizations. In addition, the program serves as a preparatory sequence for those graduate students who wish to continue their education in a doctoral program. To accomplish this goal, the master’s program addresses the prediction and measurement systems necessary for making accurate personnel decisions with respect to the selection, placement, training and evaluation of employees. It covers the impact of group and other social influences on job-related behaviors, motivation, commitment and communication, and is also concerned with planned change within the organization.
The industrial/organizational master of science degree programs at Florida Tech follow the scientist-practitioner model of graduate training, emphasizing the development of research skills, knowledge of I/O theory and techniques, and applied experiences. Through extensive coursework, students receive great breadth in training, focusing on industrial psychology, organizational psychology and measurement/statistics. Florida Tech offers both M.S. and Ph.D. level training in industrial/organizational psychology. The goal of these programs is to train well-rounded I/O psychologists who have flexibility in their career paths and the skills to make a significant difference in society.

The primary culminating experience that prepares the I/O psychology student for a career is the practicum. Practicum experiences reflect a wide variety of career opportunities within the business environment. Ideal career placements for graduates would include positions in employee selection and placement, performance appraisal, training and evaluation, organizational development, compensation and benefits, and employee relations.

Students who plan to continue on a traditional academic track may opt to complete the master’s thesis. The thesis track allows a student to work with a faculty advisor on an independent research project. Students are mentored in areas such as research design, data collection, database management, statistical analysis and preparing a document for submission. Students are also encouraged to develop their computer literacy, critical evaluation and problem-solving skills.

Admission Requirements
A master’s applicant should hold a bachelor’s degree in psychology or business, although graduates from other fields are encouraged to apply. A student without a bachelor’s degree in psychology may be required to complete up to nine credit hours of psychology coursework at the undergraduate level before registering for graduate-level courses. These courses are in addition to the 45-credit degree requirement.

A master’s applicant should have a grade point average of 3.0 (B) or higher, and should submit three letters of recommendation, a statement of career objectives, supplement form and GRE General Test scores. Official transcripts of all undergraduate and graduate courses attempted must be submitted. All applications should be submitted by February 1. Preadmission visits to the campus and conferences with faculty and students are strongly encouraged.

Degree Requirements
The Master of Science in Industrial/Organizational Psychology requires the satisfactory completion of a minimum of 45 credit hours of approved coursework and the passing of a final program examination administered in the semester of graduation, or successful defense of a master’s thesis.

Curriculum

Foundations of Psychology (12 credit hours)
PSY 5101 Statistical Research Methods 1 ................................................. 3
PSY 5102 Statistical Research Methods 2 ................................................. 3

Organizational Behavior Management, M.S.

Major Code: 8149 Degree Awarded: Master of Science
Age Restriction: N Admission status: Graduate
Delivery Mode/s: classroom only Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives, GRE

Program Chair
Jose A. Martinez-Diaz, Ph.D., BCBA-D

Organizational behavior management (OBM) is applied like traditional industrial/organizational (I/O) psychology, but is behavioral rather than cognitive or eclectic. It is analytic in that it relies on the systematic manipulation of environmental events and on directly measuring and graphing behavior (rather than reliance on written tests and interviews for assessment and evaluation). It is technological in that it precisely describes procedures in such a way that others can replicate them. Graduates may apply and enroll in the Ph.D. program in I/O psychology, combining both degrees. Graduates may also choose to combine the OBM degree with an MBA, or seek a Ph.D. in behavior analysis.
The degree program provides coursework and experience for those who plan to work as performance management or OBM consultants in business, industry, government and human service organizations. Graduates will be prepared to work in a variety of organizations helping management with training and staff development, improving staff performance, staff productivity and behavioral safety; reducing absenteeism and staff turnover; personnel selection and placement; and direct-line supervision of employees.

This degree program is only offered on the main campus in Melbourne.

**Degree Requirements**

A minimum of 42 semester credit hours is required. Requirements include completing the behavior analysis core curriculum (16 credits) with a grade of B or better in each core course, additional coursework related to OBM, either a thesis or an intensive practical training and a capstone project, and a final program examination typically administered toward the end of the student’s final semester of residency.

**Curriculum**

**Behavior Analysis Core (16 credit hours)**

**Organizational Behavior Management Core (6 credit hours)**

BEH 5400 Introduction to Organizational Behavior Management

BEH 5401 Advanced Organizational Behavior Management

**Capstone Project Option (7 credit hours)**

BEH 5450 Intensive Practical Training in Organizational Behavior Management

BEH 5490 Capstone Project in Organizational Behavior Management

**Thesis Option (7 credit hours)**

BEH 5900 Thesis Preparation

BEH 5999 Thesis

**Business Management (3 credit hours)**

BUS 5430 Financial Accounting or BUS 5450 Organizational Behavior Management

**Industrial/Organizational Psychology (10 credit hours)**

PSY 5401 Introduction to Industrial/Organizational Psychology or PSY 5412 Performance Appraisal or PSY 5421 Industrial Training

**Program Chair**

Jose A. Martinez-Diaz, Ph.D., BCBA-D

The mission of the behavior analysis doctoral degree program is to produce competent behavior-analytic researchers, instructors and practitioners who are solidly grounded in basic principles derived from the experimental analysis of behavior (EAB), who approach the world from a radical behaviorist perspective, who will continue to contribute to behavioral research and inform their practice with current research findings, and who are prepared to obtain academic and professional positions. Graduates are well-prepared to pursue academic positions, to continue active research programs and to effectively manage behavior analysts under their supervision, both in research and practice.

**Admission Requirements**

Applicants to the program must have completed, or be close to completing, a master’s degree in behavior analysis or a master’s degree in a related field with an emphasis in behavior analysis, and/or be a board certified behavior analyst, with a graduate GPA of 3.6 (on a scale of 4.0) or higher, and an undergraduate GPA of 3.0.
Applicants must submit a statement of career objectives, a résumé and the School of Psychology supplemental form available from that office. The application must include three letters of reference and a GRE General Test score of 1000 or higher (based on a combined verbal and quantitative score, where neither score is below 500). Official transcripts of all previous coursework must be submitted. All applications should be submitted by January 15.

A master’s degree in behavior analysis and/or board certification, graduate GPA, and GRE scores will be used as initial acceptance criteria. Admission is considered provisional until certification as a board-certified behavior analyst is obtained. The admissions committee will then review the applicant’s potential for scholarship and leadership in behavior analysis by evaluating supplemental materials including clinical and research experience, the application package and participation in applicant interviews.

Degree Requirements
The doctoral program requires a minimum of 83 semester credit hours beyond the bachelor’s degree, of which at least 42 semester credit hours must be completed at Florida Tech with no grades lower than B. Students must demonstrate competency in research, teaching, supervision and consultation, and pass a comprehensive examination, before being admitted to candidacy. Candidates must present a completed dissertation manuscript and successfully defend the results to the dissertation committee.

If a doctoral student has completed a master’s degree but is not a board-certified behavior analyst (BCBA®) or does not meet the supervision requirements to sit for the BCBA examination, the student may be required to take up to 12 credit hours of Intensive Practical Training in Applied Behavior Analysis (BEH 5250).

In addition, students must complete at least 15 semester credit hours of graded coursework in program courses, six credits of supervised research and at least 18 credits of dissertation. Students with a master’s degree from another institution may be required to complete additional coursework if an equivalent course was not completed.

Admission to candidacy requires the successful completion of the following components.
1. A minimum of 18 semester credit hours beyond the master’s degree.
2. Certification as a board-certified behavior analyst.
3. Approval of either of the following by a committee that is identical to the dissertation committee:
   a. A literature review paper that is deemed acceptable for submission for publication in a peer-reviewed journal. Submission is required for admission to candidacy.
   b. Completion of a grant application that is deemed by the committee to be acceptable for submission to a granting agency.

**Program Chair**

Lisa Steelman, Ph.D.

Florida Tech’s doctoral degree in industrial/organizational (I/O) psychology provides training and research opportunities in the complex issues associated with the management of human resources in the international business community. It is designed to provide a more advanced level of education as well as the opportunity to continue independent research. The program encourages graduate students to partner with outside organizations to address applied research problems and collect data that advances the field. The I/O program offers students rigorous quantitative and qualitative
training, as well as advanced training in research design. Once the projects are completed, students are required to prepare the results for professional conferences and submission to academic journals. Throughout this process, graduate students work closely with their faculty advisers and other I/O faculty. The small class size of the Ph.D. program facilitates close interaction and augments the mentoring process. Although the Ph.D. degree is primarily a research degree, the skills acquired by graduates of the I/O psychology program are designed to translate to both external and internal consulting environments. Students are encouraged to pursue a practicum in the field. The I/O psychology program produces qualified professionals for teaching and research in academic settings, as well as internal and external consulting positions.

**Admission Requirements**

A doctoral applicant should hold a bachelor's or master's degree, with a grade point average of 3.2 (on a scale of 4.0) or higher, and should submit three letters of recommendation, a statement of career objectives, supplement form and GRE General Test scores. Official transcripts of all previous coursework must be submitted. All applications should be submitted by February 1. Admission to the doctoral program is granted to a limited number of students. Preadmission contact with the faculty is highly encouraged.

**Degree Requirements**

The doctoral program requires 90 semester hours of credit beyond the bachelor's degree. Students entering with master's degrees in I/O psychology or related fields are evaluated on a case-by-case basis for possible award of transfer credit. Students are strongly encouraged to complete the requirements for the Ph.D. within four years.

The I/O doctoral program is designed to progress from general coursework to courses that are more specific in content. In the first year, students receive intensive training in quantitative methods and computer applications, and study the foundations of general psychology. A student who has not previously carried out a master's thesis is required to do so, and should start in the first year. In the second year, students begin to take more specialized courses in I/O psychology, finish their fundamental requirements and enroll in an advanced research methods course. Most students who are required to carry out master's theses should complete them by the conclusion of the second year. The third year offers more specialized courses. During the third year, students are encouraged to complete an internship assignment in a corporate, government or consulting environment. Comprehensive examinations take place at the end of the third year.

The doctoral degree in I/O psychology is a research degree. Dissertation research is begun immediately after successful completion of the comprehensive examination. Typically, the fourth year is devoted to the completion of the doctoral dissertation. Before the award of the doctoral degree, the candidate must present the completed dissertation manuscript and defend the research results to the Dissertation Committee. Students may continue to enroll in special courses and advanced seminars.

</table>
The degree of Doctor of Psychology (Psy.D.) is a service-oriented degree emphasizing clinical skills. The program leading to the Psy.D. is based on a practitioner/scientist model and is committed to the Vail model of training and the training conferences of the National Council of Schools and Programs of Professional Psychology (NCSPP). Florida Tech was the first university in the southeast to offer the Psy.D. and the model of training that it represents. In addition to classes and seminars, the training program in clinical psychology includes supervised experience in testing, diagnosis, counseling and therapy, and research projects related to special fields of interest. Before completing the doctorate, students complete one year of supervised internship training. Graduates are licensed throughout the United States and hold positions of responsibility in mental health clinics, hospitals, medical centers, HMOs, PPOs and independent practice.

Students are expected to be aware of various theories of human nature and of various treatment modalities. Students are encouraged to assess the problems of the clients, to select the procedures for behavioral change most appropriate to the problem, to assess the effectiveness of the procedure and, if necessary, to select alternate procedures. Every effort is made to emphasize the value and dignity of psychology as a profession. To this end, the importance of a problem-solving approach, as well as knowledge of the results of scientific investigations in psychology and the other behavioral sciences, is stressed.

The university’s program in clinical psychology subscribes to the American Psychological Association Code of Ethics and all students are bound by the principles enumerated in that code.

Students who accept admission into the program are subject to the ethics, professional standards and laws relating to psychologists and the practice of psychology. To engage in activities that are either unethical or inappropriate to their level of training will be cause for dismissal from the program.

Licensing/certification laws vary for the various states. Although the curriculum is based on recommendations of the Board of Educational Affairs of the American Psychological Association, and the clinical psychology program is fully accredited by the American Psychological Association’s Commission on Accreditation (750 First Street NE, Washington, D.C. 20002-4212; phone (202) 336-5979), completion of any program does not ensure admission to the licensing/certification examinations of any state. The applicant or admitted student should obtain and study the laws and regulations pertinent to licensing/certification in the state or states in which they plan to practice and should consider the educational demands on choosing both elective work and internship positions.

The program is designed with the view that the essence of professional psychology involves process and content. The process is the problem-solving approach and the content involves the knowledge of basic principles and professional skills. Both process and knowledge are in a continuous state of change but this state of change does not negate their significance. Because the model emphasizes the quality and quantity of professional skills, the practicum and internship experiences are of special importance in our program.

Program Goals and Objectives

The overarching goal of the Psy.D. program is to prepare qualified students for postdoctoral entry into the field of clinical psychology.

To accomplish this, the program has three sub-goals with corresponding specific objectives, including 1) the preparation of graduates with strong and continually developing clinical competencies, with an objective of the development of clinical competencies in relationship, assessment, intervention, research and evaluation, supervision, consultation, and administration; 2) the preparation of graduates whose clinical competencies are informed by, and in turn inform, the scientific and theoretical knowledge base of the discipline of psychology, with an objective of the development of knowledge bases in biological bases of behavior, cognitive/affective bases of behavior, social and cultural bases of behavior, individual differences, history and systems of psychology; and 3) the preparation of graduates who will respect and value cultural and individual differences and whose work will be guided by the highest of ethical and professional principles and standards, with an objective of development of a strong knowledge base and sensitivity to cultural and individual differences, and the attainment of the knowledge, skills and attitudes necessary to become ethical and professional clinical psychologists.

Admission Requirements

An applicant must possess a bachelor’s degree from an accredited institution of higher learning. Although it is not necessary for the major area to have been psychology, it is expected that those entering without a previous degree in psychology will have completed at least 18 credit hours of psychology coursework at the time of application. These courses must have been taken in a department of psychology, and should include statistics, personality theory, abnormal psychology, learning, physiological psychology and social psychology.

All application materials must be received by January 15. The application and application fee should be received by the university before receipt of reference letters and transcripts, so the applicant’s file can be established. Applications cannot be acted on until all required materials have been received. Applicants may apply online at www.fit.edu.

All applicants are required to submit the completed graduate school application form with the application fee and the psychology supplemental form (forms are available from the College of Psychology and Liberal Arts); a résumé of professional experience; a statement of professional career objectives; three letters of recommendation from psychologists familiar with the applicant’s academic and/or clinical work, to be mailed directly by the recommenders (forms are available from the College of Psychology and Liberal Arts); official undergraduate and graduate record transcripts, mailed directly from the degree-granting institutions; and Graduate Record

Clinical Psychology, Psy.D.

Major Code: 9144
Degree Awarded: Doctor of Psychology
Age Restriction: N
Admission status: graduate
Delivery Mode/s: classroom only
Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives, GRE
Program Chair
Kevin P. Mulligan, Psy.D.
1. Requirements for the Psy.D. degree include:

Grades will enter into the grade point average, but only credit hours required to repeat the course and attain a grade of B or better. All A student receiving a grade of C in a required course may be is not granted for the core clinical specialization courses listed in

Requests are evaluated by the program chair. Transfers to another university can petition for transfer of a maximum of 18 semester credits. Such requests are evaluated by the program chair. Transfers are not granted for the core clinical specialization courses listed in the curriculum description.

A student receiving a grade of C in a required course may be required to repeat the course and attain a grade of B or better. All grades will enter into the grade point average, but only credit hours from the final repeat will be credited toward the minimum credit hour requirement.

Requirements for the Psy.D. degree include:

1. A minimum of 121 semester hours of credit beyond the bachelor’s degree, including the required courses described in the curriculum section below.

2. A minimum of four years of full-time residency: eight semesters and three summer terms. Full-time status is defined as nine or more credit hours.

3. Admission to candidacy requires the successful completion of the following three components:

   a. Clinical proficiency examination (CPE). At the completion of nine practicum-related credit hours, the clinical faculty of the School of Psychology makes an assessment of student progress in clinical skill development. This CPE contains numerous components, including a written conceptualization and treatment plan of the videotaped case and an oral presentation and defense of the case.

   b. Second year student review. At the end of the second year, the clinical faculty reviews all students across a number of personal and interpersonal dimensions, which are directly tied to their ability to function as professional psychologists.

   c. Satisfactory academic progress. A 3.2 grade point average, computed on the basis of all university coursework applied to the doctoral program, is required for admission to candidacy.

4. Written comprehensive examination. At the end of the third year of study, all students are required to take and pass a written comprehensive examination. The examination includes both in-class and take-home components, and covers the core academic and clinical areas of psychology.

5. Completion of the doctoral research project.

6. An internship consisting of 2,000 clock hours of supervised experience in an internship facility accredited by the American Psychological Association to offer clinical training. This placement provides the trainee with the opportunity to take substantial responsibility for carrying out the major professional functions with appropriate supervisory support. Liaison between the Office of Clinical Training and the internship facility is maintained.

 Curriculum

The curriculum for the doctor of psychology program consists of four levels of training, as summarized below.

Level I (Beginning): This level corresponds to the first-year of training following the bachelor’s degree. It consists of basic science courses designed to develop a broad conceptual understanding of the theoretical foundations for clinical practice and entry-level relationship, assessment and intervention skills. Basic relationship building and assessment skills are developed and the student is introduced to one of a number of different models of intervention. All students will begin their practicum work by shadowing faculty and advanced students.

Level II (Intermediate): This level corresponds to the second residence year in the program. Didactic work consists of more advanced examinations of broad-based conceptual foundations, further development of assessment and intervention strategies, and beginning and intermediate practicum placements. Students begin to formulate research ideas for the doctoral research project (DRP). Areas of concentration are begun. Most students will complete their Clinical Proficiency Examination.

Level III (Advanced): This level corresponds to the third residence year in the program. Assessment, intervention and evaluation skills are fine-tuned during this year and are put into practical use in advanced practicum assignments. Systems of case
conceptualization are reviewed and related to assessment and intervention strategies. Coursework in the competency area of administration is taken, comprehensive examinations are completed and students continue with their areas of concentration or add elective courses.

**Level IV (Advanced Specialty):** This level corresponds to the fourth year in the program. During this year, students complete coursework in the competency areas of supervision and consultation, finish their areas of concentration with specialized practica, obtain more field experience in advance practica and/or take more electives. Students also complete their DRP and work toward securing internships for their last year.

Each semester has a 13-credit limit, and tuition is paid on a flat rate basis. After the first semester of enrollment, students may exceed the 13-credit limit in any semester by taking only a one- or two-credit non-required course. The course may either be taken for credit (and paid at the graduate-level credit rate) or audited (and paid at the audit rate).

**Elective Concentration Areas**
The program offers three elective concentration areas. Each area includes 12 credit hours of coursework and practica and is designed to prepare the student for advanced study during the internship and postdoctoral years.

**Family/Child Psychology**
PSY 5567 Psychotherapy Models: Family Approaches
PSY 5565 Child Disorders and Psychotherapy
PSY 5595 Practicum
PSY 6550 Marital and Sex Therapy

**Neuropsychology/Clincial Health Psychology**
PSY 5108 Health Psychology
PSY 5595 Practicum
PSY 6522 Neuropsychology and Neuropsychological Assessment
PSY 6527 Fundamentals of Clinical Neuropsychology

**Forensic Psychology**
PSY 5192 Seminar in Psychology
PSY 5595 Practicum
PSY 6102 Forensic Psychology
PSY 6104 Fundamentals of Forensic Psychology
PSY 6105 Clinical Forensic Assessment
*Students are required to take two different seminars.*

The Doctor of Psychology program includes the following required courses:

**Foundations of Psychology**

**Biological Bases of Behavior (6 credit hours)**
PSY 5105 Biological Foundations of Behavior
PSY 5511 Clinical Psychopharmacology

**Cognitive/Affective Bases of Behavior (3 credit hours)**
PSY 5116 Cognitive and Affective Bases of Behavior

**Social Bases of Behavior (6 credit hours)**
PSY 5121 Cultural and Social Psychology
PSY 5570 Multicultural Psychotherapy

**Individual Differences (6 credit hours)**
PSY 5106 Life-span Development
PSY 5502 Psychopathology

**Research Methods (15 credit hours)**
PSY 5101 Statistical Research Methods 1
PSY 5102 Statistical Research Methods 2
PSY 6998 Doctoral Research Project

**History and Systems (2 credit hours)**
PSY 5115 History and Systems of Psychology

---

**Clinical Specialization**

**Psychological Assessment (14 credit hours)**
PSY 5521 Assessment of Intelligence
PSY 5522 Laboratory in Assessment of Intelligence
PSY 5524 Laboratory in Assessment of Personality
PSY 5527 Objective Personality Assessment
PSY 5528 Projective Personality Assessment
PSY 6521 Psychodiagnosics

**Relationship and Interpersonal Skills (6 credit hours)**
PSY 5541 Clinical Skills and Techniques 1
PSY 5542 Clinical Skills and Techniques 2

**Intervention (15 credit hours)**
PSY 5501 Personality and Psychotherapy
PSY 555x Psychotherapy Models

Two of the following four courses
PSY 5553 Psychotherapy Models: Cognitive Behavioral
PSY 5554 Psychotherapy Models: Psychodynamic
PSY 5555 Psychotherapy Models: Humanistic/Existential
PSY 5556 Psychotherapy Models: Family Approaches

**Professional Standards and Ethics (3 credit hours)**
PSY 5591 Seminar in Professional Standards and Ethical Principles in Psychology 1
PSY 5592 Seminar in Professional Standards and Ethical Principles in Psychology 2
PSY 5593 Seminar in Professional Standards and Ethical Principles in Psychology 3

**Professional Issues (6 credit hours)**
PSY 6560 Supervision in Clinical Training
PSY 6561 Consultation
PSY 6562 Administration of Mental Health Services

**Supervised Practical Experience (27–33 credit hours)**
PSY 5000 Clinical Colloquium
PSY 5002 Pre-practicum
PSY 5595 Practicum (24–30 credit hours)

*A list of approved intervention courses is available on request.*

**Internship (2,000 clock hours)**
Students register for nine credits hours of internship credit (PSY 6595) in each of three semesters. Grading is on a satisfactory/unsatisfactory basis, and credits do not count toward the minimum 121 credit hours of coursework necessary for the doctor of psychology degree.

---

*May be taken during Fall or Spring Semester of year two.

---

Industrial Organizational Psychology: Faculty and graduate students are actively engaged in a variety of research topics, including the use of personality measures in selection, structural equation modeling, cognitive processes of work teams, employment law, training evaluation, the role of feedback in organizational survey topics and differences in work attitudes across cultures.

Doctor of Psychology: Faculty and doctoral students in the Psy.D. program are engaged in a number of research topics including personality assessment, self-knowledge, gender and multicultural issues, traumatology, child maltreatment, parent-child interactions, adaptation to aging, forensic issues and neuropsychological assessment.

Cognition Applied Research Lab (CARL): The Cognition Applied Research Laboratory (CARL) is an interdisciplinary group dedicated to the investigation of human–computer interaction (HCI) with focus on perception afforded cognition and cognitive tools. CARL includes faculty, and graduate and undergraduate students from all science disciplines who are interested in interdisciplinary experimental and applied research.

The mission of CARL is to enhance the qualities of life, learning and work by making people think smarter. Current and future research projects include knowledge visualizations, animation, complexity-shock, aging and HCI, brain–computer interfaces and HCI security. More information may be found at http://research.fit.edu/carl.

Department of Science and Mathematics Education

Overview
The College of Science consists of five degree-granting departments: biological sciences, chemistry, mathematical sciences, physics and space sciences, and science and mathematics education. An interdisciplinary science program administered by the physics and space sciences department allows students to enroll in a wide variety of science and engineering courses, supplemented by certain core courses and several carefully chosen humanities electives. An undergraduate program in biochemistry is administered jointly by the biological sciences and chemistry departments. In addition, a graduate-only program in computer education is offered by the science education department, in cooperation with the computer science program in the College of Engineering; and a graduate-only program in operations research is offered by the mathematical sciences department.

A student who wishes to postpone the selection of a major can enroll for up to two semesters under either a “General Science” or “General Studies” (see College of Psychology and Liberal Arts section) curriculum. These curricula are designed to be somewhat less intense than the normal freshman curriculum to allow students more time for acclimation to college life.

The normal course load taken by students in the College of Science is 16 or 17 credit hours. Students can enroll for lighter loads and are strongly encouraged to do so if difficulty is experienced in keeping up with all coursework when a full load is attempted, even though the duration of the program would, of necessity, be extended from eight to nine or more semesters. A student registered for 12 or more credit hours is considered full time. Students with cumulative GPAs below 2.0 are not allowed to register for more than 15 credit hours in a semester.

Fast Track Master’s Program for College of Science

Honors Students
This program allows undergraduate students with the honor student profile (i.e., high school GPA of 4.0, SAT score of at least 1300 and a class rank in the top five percent) to complete a master’s degree from any department within the College of Science in one year by earning graduate-level credit hours during their senior year, and applying up to six credit hours to both the bachelor’s and master’s degrees. The program is available to undergraduates who have completed a minimum of 35 credit hours at Florida Tech with an earned GPA of at least 3.4, and who have completed at least 95 credit hours toward their undergraduate degree by the time the approved student begins taking graduate-level courses. The credit hours are treated as transfer credit (GPA does not apply) when applied toward the master’s degree. Interested students should consult the dean’s office or the department heads in the College of Science for more information about this program.

Cooperative Education
Students in some curricula in the College of Science are encouraged to participate in the cooperative education program, although the availability of co-op employment opportunities varies considerably from field to field. By alternating periods of work experience in their chosen fields with academic semesters spent on campus as full-time students, participants in this program are able to earn funds needed to further their education while gaining valuable practical experience and a knowledge base that is useful in better defining career goals. The length of time needed to earn the degree is extended by an amount comparable to the number of semesters spent away from the campus. Students in this program should pay special attention to scheduling their courses well in advance to avoid conflicts between off-campus periods and the semesters when required courses are offered.

Admission
General admission regulations and the process for applying are presented in the Academic Overview section.

NONDEGREE PROGRAM

General Science

Department of Chemistry
Michael W. Babich, Ph.D., Head

Students who wish to postpone the selection of a major may enroll for up to one year as a general science student, following the curriculum described below. This curriculum is designed to allow students more time to become familiar with programs in the life sciences and physical sciences offered by the College of Science. Students may need to make up some credit hours later on (eight or fewer in most cases), if they follow the general science curriculum and make the appropriate choice between biology and physics. Students are urged to transfer to degree programs as early as possible.
Students in this program are advised by the chemistry department head until a degree program is selected. Once 30 credit hours (not including remedial courses) have been successfully completed, continued registration is contingent on selection of a degree program. Acceptance into the desired degree program is automatic unless the student has been academically dismissed.

DEPARTMENT OF BIOLOGICAL SCIENCES
Richard B. Aronson, Ph.D., Head

Associate Department Head
Richard L. Turner, Ph.D., Director of Undergraduate Programs

Director of Graduate Programs
David J. Carroll, Ph.D.

Degree Programs
Biochemistry, B.S.
Biomathematics, B.S.
Biological Sciences
Aquaculture, B.S.
Conservation Biology and Ecology, B.S.
General Biology, B.S.
Marine Biology, B.S.
Molecular Biology, B.S.
Premedical Biology, B.S.

Biological Sciences
Biotechnology, M.S.

Ecology, M.S.
Marine Biology, M.S.

Biological Sciences, Ph.D.

Undergraduate Minor Programs
Biology
Sustainability

Professors
Richard B. Aronson, Ph.D., coral reefs, climate change, paleoecology, marine ecology, Antarctica.
Mark B. Bush, Ph.D., paleoecology, biogeography, Amazonian speciation, tropical conservation, wetland ecosystems.
Julia E. Grimwade, Ph.D., DNA replication, DNA-protein interaction, bacterial cell cycle control, antibiotic discovery.
Alan C. Leonard, Ph.D., molecular biology, microbial growth control, DNA replication, superhelicity and methylation as regulators of DNA bioreactivity, DNA-protein interactions.
Junda Lin, Ph.D., molluscan and crustacean aquaculture, marine ecology.
Richard R. Sinden, Ph.D., molecular biology, biochemistry, DNA structure and function.

Richard A. Tankersley, Ph.D., ecology, physiology and behavior of marine and freshwater invertebrates.
Ralph G. Turingan, Ph.D., vertebrate functional morphology, community structure of fishes, ecological morphology of feeding systems.
Robert Van Woesik, Ph.D., population and community ecology of coral reefs, emphasis on mechanisms underlying large scale patterns in coral community structure and diversity.

Associate Professors
David J. Carrol, Ph.D., molecular basis of signal transduction at fertilization.
Michael S. Grace, Ph.D., molecular control of photoreceptors in the retina and nonretinal photoreceptors of the brain, pineal and parietal organ.
Charles D. Polson, Ph.D., application and development of biotechnology in undergraduate education, nucleic acid analysis, electrophoretic separation.

Assistant Professors
Tristan J. Fiedler, Ph.D., university advancement and development, genomics, bioinformatics, molecular and cellular biology; genetics, marine biology, fisheries.
Christin L. Pruett, Ph.D., bird population genetics, endangered species, speciation, adaptation, bird conservation.

Research Faculty
David R. Breininger, Ph.D.; Lisa K. Moore, Ph.D.

Adjunct Faculty
Dolores R. Piperno, Ph.D.

Professor Emerita
Eleanor E. Storr, Ph.D.

Professors Emeriti
Arvind M. Dhople, Ph.D.; Charles E. Helmstetter, Ph.D.;
John G. Morris, Ph.D., Russell C. Weigel, Ph.D.; Gary N. Wells, Ph.D.

Overview
The biological sciences examine every aspect of living organisms, from the biochemical reactions involved in supporting cellular processes to the interaction of organisms with their environment. Research is an integral part of the study of biological sciences, and students are encouraged to participate in ongoing research directed by departmental faculty. Each option allows research courses to fulfill up to nine credit hours of restricted or free elective credit.

Between the sophomore–junior and junior–senior years, students can elect to participate in the summer field biology, and conservation biology and ecology programs. Field biology courses serve as required courses in the conservation biology and ecology option and can serve as restricted electives for various programs. Students wishing to participate are encouraged to consult with their advisors early during the academic year to reserve places in the classes. Courses in the summer field program are taught in Africa, Australia, the Bahamas, Costa Rica, Jamaica, Peru and Puerto Rico, and the Appalachian Mountains in the United States.
Biochemistry, B.S.

Major Code: 7028
Age Restriction: N
Delivery Mode/s: classroom only
Location/s: main campus

Degree Awarded: Bachelor of Science
Admission status: undergraduate

Program Cochairs
Michael W. Babich, Ph.D., Head, Department of Chemistry
Charles D. Polson, Ph.D., Associate Professor, Biological Sciences

Biochemists, in studying all kinds of living organisms including viruses, bacteria, fungi, plants and animals (including humans), have found that many of the fundamental biochemical properties of living systems are shared throughout the hierarchy of life forms. Because biochemists try to unravel the complex chemical reactions that occur in such a wide variety of life forms, biochemistry provides the basis for practical advances in medicine, veterinary medicine, agriculture and biotechnology. Biochemistry underlies and includes such exciting fields as molecular biology and bioengineering. As the broadest of the basic sciences, biochemistry includes many subspecialties, such as inorganic biochemistry, bioorganic chemistry, physical biochemistry, biochemical and molecular genetics, biomedical pharmacology and immunochemistry. Recent advances in many areas of biochemistry have created links among technology, chemical engineering and biochemistry. More than ever, this is the age of biochemistry because the techniques of so many different disciplines can now be applied in studying the chemistry of living systems.

Career opportunities for biochemists are rapidly expanding in the areas of agricultural research, biotechnology firms, governmental laboratories, industrial research, and development and research institutes, as well as university research and teaching. Far-reaching advances in many areas of basic and applied research are projected over the next few years. These areas include plant genetics; the biochemistry of cell receptors for hormones and neurotransmitters; the diagnosis and treatment of disease, particularly inherited diseases; and toxicology. All require an understanding of biochemistry and the use of biochemical techniques.

The course of study leading to a Bachelor of Science in Biochemistry is an interdisciplinary program jointly administered by the Department of Biological Sciences and the Department of Chemistry. The curriculum has flexibility in that technical electives can be selected to provide a strong emphasis in either biology or chemistry, and prepare the biochemistry major for a variety of careers. All students take a core curriculum of basic science and mathematics during the first two years. During the junior and senior years, students take many specialized courses that reflect their choice of emphasis between biology and chemistry.

Students entering the biochemistry program as freshmen will normally be assigned faculty advisers in the department of chemistry. A student selecting an upper-division curriculum with a biological emphasis should indicate this intention by the beginning of the second semester of the sophomore year, at which time a new faculty adviser in the department of biological sciences will be assigned. A student’s request for a change of advisers from chemistry to biology, or vice versa, will be honored at any time during the program.

Admission Requirements
Students intending to apply for admission to study for a Bachelor of Science in Biochemistry should complete at least one year each of high school biology, chemistry and physics. Prospective students should also have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transfer to Florida Tech should consult with their counselors to determine transferability of community college credits. If there is a question regarding specific courses needed, either of the biochemistry program chairs listed above should be contacted.

Degree Requirements
Candidates for a Bachelor of Science in Biochemistry must complete the minimum course requirements as outlined in the following curriculum that includes a strong biology emphasis. See the Department of Chemistry for the program plan with a strong chemistry emphasis. Electives are selected in consultation with the faculty adviser to reflect the knowledge a student needs either for employment or graduate school. Deviation from the stipulated program may occur only under unusual circumstances and requires approval of the chair. The bachelor’s degree in biochemistry requires 129 credit hours for graduation.

Degree Programs—College of Science 169
The Bachelor of Science in Biological Sciences – Aquaculture seeks to educate students in unifying themes in biology, while encouraging them to expand their knowledge in more specialized subject areas. The department offers six undergraduate programs in which a student may specialize: aquaculture, conservation biology and ecology, general biology, marine biology, molecular biology and premedical biology. The curriculum is organized so that in the first two years students learn concepts fundamental to all biological sciences, and in the last two years students follow their own interests in selecting courses that are more specialized.

Aquaculture studies the theory and practice of finfish and shellfish culture. Following a core curriculum of basic science and mathematics, students take specialized courses in culture techniques of salt and freshwater algae, crustaceans, finfish and molluscs.

Admission Requirements
Students intending to apply for admission to study in the department of biological sciences should complete at least one year each of high school biology, chemistry and physics. Prospective students should also have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transferring to Florida Tech should consult with the department to determine transferability of credits. If there is a question regarding specific courses needed, students should contact the department head for undergraduate studies.

Degree Requirements
Candidates for a Bachelor of Science in Biological Sciences – Aquaculture must complete the minimum course requirements outlined in the following curriculum. Electives are selected in consultation with the faculty adviser to reflect the knowledge a student needs either for employment or graduate school.

The biochemistry curriculum allows for significant undergraduate research experience, culminating in a senior thesis for those students who wish to pursue postgraduate studies and are maintaining a grade point average of 3.0 or better in all science and mathematics courses. A qualified student wishing to participate in the senior thesis program must notify the appropriate department (either biological sciences or chemistry, depending on the student’s research interests and curriculum emphasis) no later than the end of the fall semester of the junior year. A thesis committee, consisting of one or more faculty members from each department, will be formed to consider the thesis proposal, which must be submitted during the spring semester of the junior year. After the approval of the senior thesis committee and the appropriate department head, based on both the proposal and the student’s academic record, the student will be permitted to register for Senior Thesis in Biochemistry (BCM 4991 and BCM 4992) during the senior year. These courses and Research Sources and Systems (COM 2012) represent seven credit hours of restricted biological sciences electives toward meeting the degree requirements listed above. Senior Thesis in Biochemistry students are encouraged to include at least one year of foreign language (French or German) in their degree programs.
Students intending to apply for admission to study in the department of biological sciences should complete at least one year each of high school biology, chemistry and physics. Prospective students should also have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transfer to Florida Tech should consult with the department to determine transferability of credits. If there is a question regarding specific courses needed, students should contact the associate department head for undergraduate studies.

The Bachelor of Science in Biological Sciences – Conservation Biology and Ecology seeks to educate students in unifying themes in biology, while encouraging them to expand their knowledge in more specialized subject areas. The department offers six undergraduate programs in which a student may specialize: aquaculture, conservation biology and ecology, general biology, marine biology, molecular biology and premedical biology. The curriculum is organized so that in the first two years students learn concepts fundamental to all biological sciences, and in the last two years students follow their own interests in selecting courses that are more specialized.

Conservation biology and ecology provides a well-rounded background in the science underlying conservation. Emphasis is placed on ecological principles and student-led experimental design and implementation. Ample opportunity for fieldwork exists locally and via a required summer field course, choosing between programs in the Galapagos Islands, Jamaica, Puerto Rico, Peru or the Smoky Mountains. Graduates are fully prepared for conservation-related employment or graduate studies in ecology.

Biological Sciences – Conservation Biology and Ecology, B.S.

Major Code: 7029

Degree Awarded: Bachelor of Science

Age Restriction: N

Delivery Mode/s: Classroom only

Location/s: Main campus

TOTAL CREDITS REQUIRED: 129
The Bachelor of Science in Biological Sciences – General Biology seeks to educate students in unifying themes in biology, while encouraging them to expand their knowledge in more specialized subject areas. The department offers six undergraduate programs in which a student may specialize: aquaculture, conservation biology and ecology, general biology, marine biology, molecular biology and premedical biology. The curriculum is organized so that in the first two years students learn concepts fundamental to all biological sciences, and in the last two years students follow their own interests in selecting courses that are more specialized.

General Biology offers the greatest flexibility to satisfy a student’s specific interests.

**Admission Requirements**

Students intending to apply for admission to study in the department of biological sciences should complete at least one year each of high school biology, chemistry and physics. Prospective students should also have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transfer to Florida Tech should consult with the department to determine transferability of credits. If there is a question regarding specific courses needed, students should contact the associate department head for undergraduate studies.

**Degree Requirements**

Candidates for a Bachelor of Science in Biological Sciences – General Biology must complete the minimum course requirements outlined in the following curriculum. Electives are selected in consultation with the faculty adviser to reflect the knowledge a student needs either for employment or graduate school.

The Bachelor of Science in Biological Sciences – Molecular Biology seeks to educate students in unifying themes in biology, while encouraging them to expand their knowledge in more specialized subject areas. The department offers six undergraduate programs in which a student may specialize: aquaculture, conservation biology and ecology, general biology, marine biology, molecular biology and premedical biology. The curriculum is organized so that in the first two years students learn concepts fundamental to all biological sciences, and in the last two years students follow their own interests in selecting courses that are more specialized.

Molecular biology provides training in DNA and protein purification, recombinant DNA technology, gene manipulation, PCR, nucleic acid hybridization, DNA sequence analysis, gene expression assays and genomics. Students completing the program are qualified for employment in the rapidly growing biotechnology industry and for entry into graduate study in a wide variety of areas encompassed by molecular biology.

Admission Requirements
Students intending to apply for admission to study in the department of biological sciences should complete at least one year each of high school biology, chemistry and physics. Prospective students should also have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transfer to Florida Tech should consult with the department to determine transferability of credits. If there is a question regarding specific courses needed, students should contact the associate department head for undergraduate studies.

Degree Requirements
Candidates for a Bachelor of Science in Biological Sciences – Molecular Biology must complete the minimum course requirements outlined in the following curriculum. **TOTAL CREDITS REQUIRED** 129
The Bachelor of Science in Biological Sciences – Premedical Biology seeks to educate students in unifying themes in biology, while encouraging them to expand their knowledge in more specialized subject areas. The department offers six undergraduate programs in which a student may specialize: aquaculture, conservation biology and ecology, general biology, marine biology, molecular biology, and premedical biology. The curriculum is organized so that in the first two years students learn concepts fundamental to all biological sciences, and in the last two years students follow their own interests in selecting courses that are more specialized.

The premedical biology program is designed for students interested in becoming physicians. It is also appropriate for students interested in veterinary medicine and allied health professions (such as physician's assistant, physical therapy or pharmacy). The chair of this degree option serves as Florida Tech's premedical adviser, and also organizes a premedical evaluation committee to provide evaluation letters for students applying to medical school. Students graduating from this program have had an excellent acceptance rate into medical and professional schools.

**Admission Requirements**

Students intending to apply for admission to study in the department of biological sciences should complete at least one year each of high school biology, chemistry and physics. Prospective students should also have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transfer to Florida Tech should consult with the department to determine transferability of credits. If there is a question regarding specific courses needed, students should contact the associate department head for undergraduate studies.

**Degree Requirements**

Candidates for a Bachelor of Science in Biological Sciences – Premedical Biology must complete the minimum course requirements outlined in the following curriculum. Electives are selected in consultation with the faculty adviser to reflect the knowledge a student needs either for employment or graduate school.

### Biomathecics, B.S.

**Degree Code:** 7078
**Degree Awarded:** Bachelor of Science
**Age Restriction:** N
**Admission status:** undergraduate

Mathematical biology (biomathematics) is a highly interdisciplinary program at the intersection of mathematics, biology, and computer science. The program is offered through collaboration between the mathematics and biology departments. Primarily during the freshman and sophomore years biomathematics majors complete core courses, then specialize during the junior and senior years. Specialization is based on interest in computer science, mathematics or biology, while retaining interdisciplinary training.

The interdisciplinary nature of the program enables undergraduates who are interested in combining mathematics, computer science and biology to be more competitive for graduate programs and careers in bioinformatics, biostatistics, biomedical engineering, biomathematics or medicine.

### Degree Requirements

Candidates for the Bachelor of Science in Biomathematics must complete the minimum course requirements as outlined in the following curriculum.

### Elective Restrictions

Choices of restricted electives are subject to approval by the student’s adviser. At least 30 elective credit hours must be at the 3000-level (or higher).

### MINOR PROGRAMS

Minors in biology and sustainability are offered through the biological sciences department. The sustainability minor is interdisciplinary and available to all majors. A complete policy statement regarding minors can be found in the Academic Overview section. Information about current minor offerings is available through the individual colleges/departments.
Biology (19–21 credit hours)

Minor Code: 6021
Degree Awarded: none
Age Restriction: N
Admission status: undergraduate
Delivery Mode/s: classroom only
Location/s: main campus

BIO 1010 Biological Discovery 1
BIO 1020 Biological Discovery 2

*11–13 credit hours of BIO courses are required to complete the biology minor. The department offers many elective courses of either three or four credit hours each. Courses of four credit hours include a laboratory. At least one Restricted Elective must be a laboratory course (4 credit hour). The remaining 7–9 credit hours may consist of any combination of courses of three or four credit hours. Courses not allowed as electives include independent study, seminar and non-major biology courses.

Sustainability (18 credit hours)

Minor Code: 6040
Degree Awarded: none
Age Restriction: N
Admission status: undergraduate
Delivery Mode/s: classroom only
Location/s: main campus

ISC 1500 Introduction to Sustainability
ISC 4000 Applied Sustainability

*Requires four Restricted Electives (12 credit hours), including one introductory course in each of four areas: ecology and environmental science, economics, technology, and social sciences/humanities. An upper-level course may be substituted for any introductory course with the approval of the adviser.

A complete list of eligible courses is available from the department.

Note: Biology and Chemistry minors are not available to Biochemistry majors. At least nine (9) credit hours of the minor must be taken at Florida Tech.

GRADUATE DEGREE PROGRAMS

Biological Sciences – Biotechnology, M.S.

Major Code: 8024
Degree Awarded: Master of Science
Age Restriction: N
Admission status: graduate
Delivery Mode/s: classroom only
Location/s: main campus

Admission Materials: 3 letters of recommendation, objectives, GRE

The marine environment is a rich source of pharmaceuticals, polymers, diagnostic reagents and genetically diverse organisms. The biological processes of the majority of marine organisms are not well understood and the biotechnology industry lacks individuals trained to develop and practice biotechnology using marine animals, plants and microorganisms. The master's program in biotechnology is a nonthesis program that builds on Florida Tech's unique location on the Atlantic coast, and its established strengths in marine biology, marine ecology, natural products chemistry, molecular biology and biochemistry to provide a path for students who aspire to learn biotechnology and earn jobs in industry. The program is focused on those areas of biotechnology related to microbiology, natural products chemistry and molecular biology of marine organisms. Students are provided with a diverse combination of classroom experience, field studies, chemical and molecular biological laboratory techniques and development of communication skills most appropriate for an industrial or academic research career.

The goal of this training program is to produce individuals with a strong interdisciplinary background in biology and chemistry, who will be qualified to meet the needs of biotechnology in industrial or academic settings. To provide additional experience with state-of-the-art technology, students in this program have the opportunity to include summer internships in an industrial laboratory as part of their degree training. In most cases, these internships are related to collaboration between Florida Tech faculty and a particular laboratory in a biotechnology firm. Internship sites include Merck, Sharp and Dohme (Rahway, N.J.), Lederle Labs (Pearl River, N.Y.) and Zymogenetics (Seattle, Wash.). Those students wishing to receive internship training locally may substitute a research experience with Florida Tech faculty, subject to approval.

Admission Requirements

The applicant must have a bachelor of science degree in biology, chemistry, biochemistry or equivalent. Applicants deficient in organic chemistry, genetics, biochemistry or microbiology are required to take undergraduate courses before starting the master of science program. For this program, GRE scores (General Test only), three letters of recommendation and a statement of objectives are required. Admission decisions for fall semester enrollment are made by March 15, and for spring semester enrollment, by October 1.

Degree Requirements

The master's degree in biotechnology is a nonthesis option and requires the satisfactory completion of 33 credit hours, including a maximum of 27 credit hours formal coursework (six credit hours of research may substitute for six credit hours of formal coursework), seminars (BIO 5990), and up to 12 credit hours of industrial internship (BIO 5997) and/or summer laboratory experience (BIO 5537) at Florida Tech. A project report on the research experience is written, presented and defended before a committee. The committee, the composition of which is similar to that for the master's degree, may ask questions relating to previous coursework.

Curriculum

The adviser assists the student in devising a program of study that is approved by the Graduate Academic Steering Panel and department head. The student must complete courses appropriate for the option, chosen from any academic unit in the College of Science, College of Engineering, College of Psychology and Liberal Arts and Nathan M. Bisk College of Business.

Summary of Program Requirements

Formal coursework ................................................. 21–27
Biological Sciences Seminar ........................................ 0
Research* ............................................................ 0–6
Internship or summer laboratory experience ............... 6–12
TOTAL CREDIT HOURS REQUIRED ....................... 33

*Research may focus on biology, chemistry, computer sciences or another area approved by the student's adviser.

Biological Sciences – Cell and Molecular Biology

Biology, M.S.

Major Code: 8022
Degree Awarded: Master of Science
Age Restriction: N
Admission status: graduate
Delivery Mode/s: classroom only
Location/s: main campus

Admission Materials: 3 letters of recommendation, objectives, GRE

The Master of Science in Biology – Cell and Molecular Biology prepares the student either for a professional career or for further graduate study. This goal is achieved through a balance of coursework and research activities.

Admission Requirements

General admission requirements and the process for applying are presented in the Academic Overview section. For this program, GRE scores (General Test only), three letters of recommendation and a statement of objectives are required. Admission decisions...
for fall semester enrollment are made by March 15, and for spring semester enrollment by October 1.

Degree Requirements
The master of science degree requires the successful completion of 34 credit hours, including formal coursework, presentation of a graduate thesis seminar, and preparation and oral defense of a thesis. The thesis involves the completion of original research of publishable quality.

The student’s thesis research and program of study reflect the emphasis of the area chosen. All thesis research is conducted under the direction of an adviser and an advisory committee. The advisory committee is composed of at least three members: two from the department (including the adviser) and one from another academic unit.

Curriculum
The adviser assists the student in devising a program of study. The latter requires approval by the Graduate Academic Steering Panel and the department head. The student must complete courses appropriate for the option. These can be chosen from the offerings of any academic unit in the College of Science, College of Engineering and College of Psychology and Liberal Arts.

Students wanting to acquire special research skills should enroll in Biological Research Rotation (BIO 5998). A master’s student must elect the Biological Sciences Seminar (BIO 5990) every semester it is offered, except for the semester in which the student presents a thesis seminar. During this semester, the student will register for both Thesis (BIO 5999) and Biological Research Seminar (BIO 5991). Each student must present a departmental thesis seminar before graduation.

Summary of Program Requirements
Formal Course Work (minimum) ........................................... 18
Biological Research Seminar .............................................. 1
Biological Research or Biological Research Rotation .............. 0–9
Thesis (maximum) .......................................................... 6
TOTAL CREDITS REQUIRED ............................................ 34

The Master of Science in Biology– Ecology prepares the student either for a professional career or for further graduate study. This goal is achieved through a balance of coursework and research activities.

Admission Requirements
General admission requirements and the process for applying are presented in the Academic Overview section. For this program, GRE scores (General Test only), three letters of recommendation and a statement of objectives are required. Admission decisions for fall semester enrollment are made by March 15, and for spring semester enrollment by October 1.

Biological Sciences, Ph.D.

Major Code: 9021
Degree Awarded: Doctor of Philosophy
Age Restriction: N
Delivery Mode/s: classroom only
Admission Materials: 3 letters of recommendation, objectives, GRE
Admission status: graduate
Location/s: main campus

The doctor of philosophy degree is offered for students who want to carry out advanced research in the biological sciences. A student's research can encompass any area represented by a faculty member. The objective is to prepare the student at the highest academic level for a productive career in research, teaching and/or administration.

Admission Requirements
A doctoral applicant must have a bachelor’s or master’s degree. For admission, a student should have a superior academic record, with a minimum GPA of 3.0 (on a scale of 4.0) in undergraduate work or 3.2 in graduate work, three letters of recommendation and scores from the GRE (General Test).

General admission requirements and the process for applying are presented in the Academic Overview section. Admission decisions for fall semester enrollment are made by March 1, and for spring semester enrollment by October 1.

Degree Requirements
The doctor of philosophy degree is primarily a research degree and is conferred in recognition of research accomplishments as well as completion of a program of study. Each student must complete an approved program of study, pass a comprehensive written and/or oral examination, write an acceptable research proposal and file a petition for admission to candidacy, complete a program of significant original research, prepare and defend a dissertation concerning the research and present a dissertation seminar. Each candidate is expected to publish major portions of the dissertation in refereed national or international journals.

Each doctoral student must prepare a program of study within one year after entering the program. To assure that the student possesses a satisfactory knowledge of biological principles, the student might be required to take certain courses in biological sciences and related disciplines. The student has an advisory committee appointed by his or her adviser with the approval of the department head. The committee is composed of at least five members: four faculty members (including the adviser) from the department and one faculty member from another academic unit.

The proposal represents the research plan that the student will pursue for the dissertation. It should be written under the close supervision of the adviser, and the proposal must be presented to and approved by the advisory committee.

Doctoral research represents a significant contribution to the knowledge of a particular problem. A student must be prepared to devote considerable time and effort to research. With the adviser’s approval, the student presents the preliminary copies of the dissertation to the advisory committee for critical evaluation. Once the dissertation satisfies the advisory committee, the student then orally defends the work. If the defense is satisfactory, the advisory committee will approve the dissertation once the final revisions are completed.

Prior to graduation, the student must present a dissertation seminar to the faculty and graduate students. General degree requirements are presented in the Academic Overview section.

Curriculum

The adviser assists the student in devising a program of study, which requires approval by the program of study committee and the department head. The committee and department head must also approve any revision of the program of study.

In developing a program of study, considerable latitude is allowed for course selection and research interests. Appropriate courses can be selected from the offerings of any academic unit in the College of Science, College of Engineering or College of Psychology and Liberal Arts. The student may register for Biological Research Rotation (BIO 5998) to learn specific skills and techniques available from the faculty. All doctoral students must elect the Biological Sciences Seminar (BIO 5990) every semester it is offered, except for the semester the student presents a dissertation seminar (Biological Research Seminar, BIO 5991).

Summary of Program Requirements
Formal Course Work Beyond Bachelor's Degree (minimum) .................. 24
Biological Research Seminar ........................................................... 1
Biological Research* ..................................................................... 0–24
Doctoral Dissertation (maximum) ..................................................... 30

*Inclusion of Biological Research Rotation (BIO 5998) is recommended.

A minimum of 79 credit hours beyond the bachelor's degree is required. For students entering with a master’s degree, former coursework completed for the master's degree can fulfill a significant portion of the 24 credit hours of required doctoral coursework. Nonetheless, the student should be prepared to complete some additional coursework.

RESEARCH

Biochemistry, Molecular Biology and Molecular Genetics:
A variety of molecular and biochemical approaches are used in the department to answer questions related to regulation of cell duplication, signal transduction in early development, circadian rhythms and sensory systems, microbial pathogenesis, plant growth, and the assembly of subcellular structures. A major effort is underway to develop novel cell culture systems for production of synchronously growing populations of human cells. Intracellular complexes of DNA...
and protein are under study to elucidate the regulatory mechanisms that trigger DNA replication and cell division in bacteria. The role of signal transduction pathways induced by calcium in the fertilization step of embryogenesis is another active area of research. Drug discovery efforts are focused on the genetics of the polyketide synthesis pathway in a variety of uncharacterized microorganisms collected from extreme environments. Development and analysis of new bacterial growth inhibitors is also underway for Mycobacterium, Escherichia and other important bacterial pathogens. Another expanding research area is the neurophysiological and molecular analysis of photoreceptors, particularly the infrared receptors in snakes. The diversity of biochemical and molecular research conducted by members of the biological sciences department provides for a rich and interactive environment for graduate students.

**Marine Biology:** The marine biology faculty maintain active research programs in finfish, crustacean, molluscan, coral and echinoderm biology. The evolution and ecological physiology of organismal design are investigated using high-speed videography, electromyography, and biomechanical and ecomorphological analysis of feeding in field-caught and laboratory-reared fish. Fisheries research includes analyses of early-life history and recruitment patterns of estuarine-dependent sport fish species. Crustacean research centers on the ecology and physiology of adult and early-life history stages, especially the migratory behavior of spawning female crabs and the recruitment and habitat selection of post-larvae. Research on suspension-feeding invertebrates examines the mechanisms responsible for food capture, selection and processing. Remote sensing, as well as laboratory and field investigations of corals, explores the effects of global-climate change on coral reefs. Studies of echinoderms have concentrated on their reproduction, anatomy, systematics and ecology by using physiological, histological, morphological and field techniques. Aquaculture programs are investigating the reproductive and feeding biology of ornamental shellfish and finfish species.

**Molecular Marine Biology:** Collaborative research among diverse faculty and students enables the application of molecular biological techniques to marine biology topics such as genetic identification of fishery populations, biochemistry of molluscan shell growth, response of marine organisms to anthropogenic pollutants, genetic engineering in aquaculture and the relationship of enzymes to rates of calcification and skeletogenesis in commercially significant marine organisms.

**Ecology and Conservation Biology:** Research activities include studies of coral reef ecology, climate change, paleobotany, paleoecology, biogeography, biodiversity, macroevolution, freshwater and marine aquaculture, fisheries ecology, population ecology of birds, ecomorphology and the life history and ecology of selected crustaceans and echinoderm species. Study locations range from local to international, including the Indian River Lagoon, Alaska, the Yucatan Peninsula, Panama, the Galapagos Islands, Amazonia and Antarctica.

**DEPARTMENT OF CHEMISTRY**

**Michael W. Babich, Ph.D., Head**

**Degree Programs**

**Biochemistry, B.S., M.S.**

Chemistry
- Chemical Management, B.S.
- General Chemistry, B.S.
- Premedical Chemistry, B.S.
- Research Chemistry, B.S.
- Chemistry, M.S., Ph.D.

**Undergraduate Minor Program**

Chemistry

Professors
- Michael W. Babich, Ph.D., solid-state chemistry, including x-ray crystallographic structure determination, mechanisms of reactions in solids, kinetic investigations of coordination complexes, thermal analysis.
- J. Clayton Baum, Ph.D., photophysical and photochemical problems, optical sensors, molecular modeling.
- Gordon L. Nelson, Ph.D., polymers, polymer flammability and aging, C-13 NMR.
- Joshua Rokach, Ph.D., leukotrienes, lipoxins, synthetic organic chemistry, synthetic pharmaceuticals.
- Virender K. Sharma, Ph.D., analytical, geochemistry and environmental chemistry.
- Mary L. Sohn, Ph.D., nature of sedimentary humic acids in aquatic sediments, evaluation of humic acid-metal and humic acid-organometallic formation constants.

**Associate Professors**
- Boris B. Akhremitchev, Ph.D., single-molecule techniques, protein-ligand interactions, hydrophobic interactions, protein aggregation, atomic force microscopy, force spectroscopy, physical and biophysical chemistry.
- Monica H. Baloga, Ph.D., bioorganic chemistry, physical organic chemistry.
- Alan B. Brown, Ph.D., physical organic chemistry, stereochemistry, bioorganic chemistry.
- D. Andrew Knight, Ph.D., inorganic chemistry, catalysis, bioinorganic chemistry, biodefense applications, green chemistry.
- Nasri A. Nesnas, Ph.D., bioorganic chemistry.
- Mark J. Novak, Ph.D., biocatalysis, enzyme assisted synthesis, metabolic studies of chemical and biological warfare agents.
- Joel A. Olson, Ph.D., scanning tunneling microscopy.
- Rudolf J. Wehmschulte, Ph.D., materials and organometallic chemistry.
- Kurt Winkelmann, Ph.D., physical and materials chemistry including photochemistry, catalysis, surface chemistry.

**Program Cochairs**
- Michael W. Babich, Ph.D., Head, Department of Chemistry
- Charles D. Polson, Ph.D., Associate Professor, Biological Sciences

Biochemists, in studying all kinds of living organisms including viruses, bacteria, fungi, plants and animals (including humans), have found that many of the fundamental biochemical properties of living systems are shared throughout the hierarchy of life forms. Because biochemists try to unravel the complex chemical reactions...
that occur in such a wide variety of life forms, biochemistry provides the basis for practical advances in medicine, veterinary medicine, agriculture and biotechnology. Biochemistry underlies and includes such exciting fields as molecular biology and bioengineering. As the broadest of the basic sciences, biochemistry includes many subspecialties, such as inorganic biochemistry, biorganic chemistry, physical biochemistry, biochemical and molecular genetics, biomedical pharmacology and immunoochemistry. Recent advances in many areas of biochemistry have created links among technology, chemical engineering and biochemistry. More than ever, this is the age of biochemistry because the techniques of so many different disciplines can now be applied in studying the chemistry of living systems.

Career opportunities for biochemists are rapidly expanding in the areas of agricultural research, biotechnology firms, governmental laboratories, industrial research, and development and research institutes, as well as university research and teaching. Far-reaching advances in many basic and applied research are projected over the next few years. These areas include plant genetics; the biochemistry of cell receptors for hormones and neurotransmitters; the diagnosis and treatment of disease, particularly inherited diseases; and toxicology. All require an understanding of biochemistry and the use of biochemical techniques.

The course of study leading to a Bachelor of Science in Biochemistry is an interdisciplinary program jointly administered by the Department of Biological Sciences and the Department of Chemistry. The curriculum has flexibility in that technical electives can be selected to provide a strong emphasis in either biology or chemistry, and prepare the biochemistry major for a variety of careers. All students take a core curriculum of basic science and mathematics during the first two years. During the junior and senior years, students take many specialized courses that reflect their choice of emphasis between biology and chemistry.

Students entering the biochemistry program as freshmen will normally be assigned faculty advisers in the department of chemistry. A student selecting an upper-division curriculum with a biological emphasis should indicate this intention by the beginning of the second semester of the sophomore year, at which time a new faculty adviser in the department of biological sciences will be assigned. A student's request for a change of advisers from chemistry to biology, or vice versa, will be honored at any time during the program.

**Admission Requirements**

Students intending to apply for admission to study for a Bachelor of Science in Biochemistry should complete at least one year each of high school biology, chemistry and physics. Prospective students should have at least three years of high school mathematics, including second-year algebra and trigonometry.

Florida Tech has articulation agreements with many of the community colleges in Florida. Students contemplating transfer to Florida Tech should consult with their counselors to determine transferability of community college credits. If there is a question regarding specific courses needed, either of the biochemistry program chairs listed above should be contacted.

**Degree Requirements**

Candidates for a Bachelor of Science in Biochemistry must complete the minimum course requirements as outlined in the following curriculum that includes a strong chemistry emphasis. See the Department of Biological Sciences for the program plan with a strong biology emphasis. Electives are selected in consultation with the faculty adviser to reflect the knowledge a student needs either for employment or graduate school. Deviation from the stipulated program may occur only under unusual circumstances and requires approval of the chair. The bachelor's degree in biochemistry requires 129 credit hours for graduation.

180  Florida Tech
Chemistry – Chemical Management, B.S.

Major Code: 7032  Degree Awarded: Bachelor of Science
Age Restriction: N  Admission status: undergraduate
Delivery Mode: on-campus only  Location: main campus

The Bachelor of Science in Chemistry – Chemical Management is accredited by the American Chemical Society. This program prepares the graduate for the many diverse career opportunities available to the chemist in government, private industry and academia.

Chemical management is designed for the student interested in a business career in the chemical industry. Chemical management provides a complete program in chemistry, supplemented with selected business coursework.

Degree Requirements

Candidates for a Bachelor of Science in Chemistry – Chemical Management must complete the minimum course requirements as indicated. Deviation from the recommended program can be made only with the approval of the student’s adviser and the concurrence of the department head.

Because the subject matter in general chemistry forms a critically important foundation for all of the advanced chemistry courses, both CHM 1101 and CHM 1102 must be passed with grades of at least C before taking any other chemistry courses.

The Bachelor of Science in Chemistry – General Chemistry is accredited by the American Chemical Society. This program prepares the graduate for the many diverse career opportunities available to the chemist in government, private industry and academia.

General chemistry is similar to the research chemistry program but with greater flexibility for the addition of electives during the senior year. It also provides excellent preparation for professional or graduate schools, or for a career in industry.

### Degree Requirements

Candidates for a Bachelor of Science in Chemistry – General Chemistry must complete the minimum course requirements as indicated. Deviation from the recommended program can be made only with the approval of the student’s adviser and the concurrence of the department head.

Because the subject matter in general chemistry forms a critically important foundation for all of the advanced chemistry courses, both CHM 1101 and CHM 1102 must be passed with grades of at least C before taking any other chemistry courses.

The Bachelor of Science in Chemistry – Premedical Chemistry is accredited by the American Chemical Society. This program prepares the graduate for the many diverse career opportunities available to the chemist in government, private industry and academia.

Premedical chemistry is designed for the student interested in a solid background in chemistry in preparation for a career in medicine or a related professional field. The curriculum includes all required coursework to make the student competitive for admission to medical, dental or veterinary schools. The adviser to this program provides up-to-date information on admission requirements for most of those schools, as well as admission test information.

**Degree Requirements**

Candidates for a Bachelor of Science in Chemistry – Premedical Chemistry must complete the minimum course requirements as indicated. Deviation from the recommended program can be made only with the approval of the student’s adviser and the concurrence of the department head.

Because the subject matter in general chemistry forms a critically important foundation for all of the advanced chemistry courses, both CHM 1101 and CHM 1102 must be passed with grades of at least C before taking any other chemistry courses.

**Chemistry – Research Chemistry, B.S.**

**Major Code:** 7034  
**Degree Awarded:** Bachelor of Science  
**Age Restriction:** N  
**Admission status:** undergraduate  
**Delivery Mode/s:** classroom only  
**Location/s:** main campus  

The Bachelor of Science in Chemistry – Research Chemistry is accredited by the American Chemical Society. This program prepares the graduate for the many diverse career opportunities available to the chemist in government, private industry and academia.

Research chemistry students receive an ACS-certified degree by following this program plan. Research chemistry is the best choice for those who wish to pursue an advanced degree after graduation and are interested in a career in chemical research. This program features a full year of undergraduate research during the senior year.

**Degree Requirements**

Candidates for a Bachelor of Science in Chemistry – Research Chemistry must complete the minimum course requirements as indicated. Deviation from the recommended program can be made only with the approval of the student’s adviser and the concurrence of the department head.

Because the subject matter in general chemistry forms a critically important foundation for all of the advanced chemistry courses, both CHM 1101 and CHM 1102 must be passed with grades of at least C before taking any other chemistry courses.
To enter the senior year of the research chemistry option, a cumulative grade point average of 3.0 in all chemistry courses at the end of the fall semester of the junior year is required.

An applicant for admission to the master's program in biochemistry should have an undergraduate degree in chemistry or in a related area. Typically, a minimum of eight semester courses should have been taken in four of the five major areas of chemistry: organic, analytical, physical, inorganic, and biochemistry; as well as appropriate courses in mathematics and physics. Applicants may be admitted on a provisional basis with the requirement that undergraduate deficiencies be corrected during the first year of study. Proficiency examinations are administered to all new students the week before the beginning of classes as an aid in planning each program of study.

General admission requirements and the process for applying are presented in the Academic Overview section.

**Degree Requirements**

The Master of Science in Biochemistry is based on successful completion of a minimum of 34 graduate credit hours following an approved program plan. A research proposal, thesis and oral examination in defense of the thesis are required.
Degree Programs—College of Science

Thesis Research
A thesis based on research conducted in residence at Florida Tech under the direction of a member of the chemistry department graduate faculty is required. During the first academic semester, the student selects a faculty member to serve as research adviser. During the same semester and with the assistance of the adviser, the student selects an advisory committee, prepares a program plan, and defines a research topic. The student then progressively continues through the stages of research proposal, research, thesis and oral examination. Throughout this period, the advisory committee provides assistance and direction to the student and serves as the review board for the research proposal, thesis and oral examination.

Curriculum
The program plan has a minimum of 34 credit hours and includes four core chemistry courses, four additional chemistry/biology courses, and nine credit hours of thesis and one credit of seminar.

Core Courses (12 credit hours)
- CHM 5002 Advanced Inorganic Chemistry: 3
- CHM 5111 Advanced Physical Chemistry: 3
- CHM 5304 Advanced Analytical Chemistry: 3
- CHM 5500 Advanced Organic Chemistry: 3

Chemistry/Biology Electives (12 credit hours*)
- CHM 5018 Special Topics in Inorganic Chemistry or BIO 4101 Molecular Biology*: 3
- CHM 5501 Interpretation of Chemical Spectra: 3
- CHM 5507 Natural Products or CHM 5508 Bioorganic Chemistry: 3
- CHM 5520 Medicinal Chemistry or BIO 5585 Protein Structure and Function: 3

Thesis (10 credit hours)
- CHM 5901 Chemistry Thesis Seminar: 3
- CHM 5999 Thesis (taken for a total of 9 credit hours): 9

TOTAL CREDITS REQUIRED: 34

*Students who have not taken undergraduate biochemistry are required to take the 4-credit-hour Biochemistry 1 (BIO 4010) in place of the 3-credit-hour Molecular Biology before registering for any 5000-level elective courses. This requirement adds one credit hour to the total credits required.

Chemistry, M.S.

Major Code: 8031
Degree Awarded: Master of Science
Age Restriction: N
Delivery Mode/s: classroom only
Location/s: main campus
Admission Materials: none

An applicant for admission to the master’s program should have an undergraduate degree in chemistry or in a related area. Typically, a minimum of eight semester courses should have been taken in four of the five major fields of chemistry: organic, analytical, physical, inorganic and biochemistry; as well as appropriate courses in mathematics and physics. Applicants may be admitted on a provisional basis with the requirement that undergraduate deficiencies be corrected during the first year of study. Proficiency examinations are administered to all new students the week before the beginning of classes as an aid in planning each program of study.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
The Master of Science in Chemistry is based on successful completion of a minimum of 34 graduate credit hours following an approved program plan. A research proposal, thesis and oral examination in defense of the thesis are required.

Thesis Research
A thesis based on research conducted in residence at Florida Tech under the direction of a member of the chemistry department graduate faculty is required. During the first academic semester, the student selects a faculty member to serve as research adviser. During the same semester and with the assistance of the adviser, the student selects an advisory committee, prepares a program plan, and defines a research topic. The student then progressively continues through the stages of research proposal, research, thesis and oral examination. Throughout this period, the advisory committee provides assistance and direction to the student and serves as the review board for the research proposal, thesis and oral examination.

Curriculum
Each student follows an individual program plan. The program plan must have a minimum of 34 credit hours and include four core chemistry courses, three additional chemistry courses, one technical elective, nine credit hours of thesis and one credit of seminar.

The student must register for Graduate Seminar (CHM 5900) each semester offered, concluding with Thesis Seminar (CHM 5901) during the last semester of thesis research. All courses selected for inclusion on the program plan are subject to approval by the department head.

Core Courses
- CHM 5002 Advanced Inorganic Chemistry
- CHM 5111 Advanced Physical Chemistry
- CHM 5304 Advanced Analytical Chemistry
- CHM 5500 Advanced Organic Chemistry

Chemistry Electives
Three courses, chosen from different areas of specialization, must be taken from the following:
- CHM 5017 Physical Methods in Inorganic Chemistry
- CHM 5018 Special Topics in Inorganic Chemistry
- CHM 5095 Chemical Research Projects
- CHM 5112 Special Topics in Physical Chemistry
- CHM 5114 Applied Optical Spectroscopy
- CHM 5119 Chemical Dynamics
- CHM 5501 Interpretation of Chemical Spectra
- CHM 5503 Organic Synthesis
- CHM 5504 Theoretical Organic Chemistry
- CHM 5507 Natural Products
- CHM 5550 Polymer Chemistry

Technical Elective
The technical elective may be selected from other courses offered within the chemistry department or other departments of the university.

Chemistry, Ph.D.

Major Code: 9031
Degree Awarded: Doctor of Philosophy
Age Restriction: N
Delivery Mode/s: classroom only
Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives

A candidate for the doctoral program will typically have a bachelor’s or master’s degree in chemistry with outstanding performance. Students enrolled in the master’s program can apply to change their status to work directly toward the doctorate after completing 14 credit hours of graduate coursework at Florida Tech with a cumulative grade point average of at least 3.3.

General admission requirements and the process for applying are presented in the Academic Overview section.
Degree Requirements

The doctoral degree is primarily a research degree and is conferred in part in recognition of research accomplishments. Each student must complete an approved program of coursework, pass the cumulative written examinations, pass the comprehensive oral examination, write an acceptable research proposal and file a petition for admission to candidacy, complete a significant original research study, prepare and defend a dissertation concerning the research, and present a seminar on the dissertation research. The dissertation research is expected to be of publishable quality, according to the standards of peer-reviewed national or international journals.

Each new doctoral student is required to pass six cumulative examinations. At least four must be in the chosen area of concentration and up to two can be in an additional area. Students must begin these examinations in their second semester in residence. Four examinations are offered each semester. A maximum of 11 attempts is allowed.

A doctoral student must have a program of study approved by the department head by the end of the first semester in residence. This program is based on the student’s goals and background.

The proposal presents the research plan to be followed in the dissertation work. It is developed under close supervision of the adviser. Areas of specialization are included under research activities. The proposal is presented to and approved by the student’s committee and department head.

After the research project is completed and approved by the adviser, the dissertation is submitted to the advisory committee for critical evaluation. The student then orally defends the dissertation.

General degree requirements are presented in the Academic Overview section.

Curriculum

In developing a program of study for the doctoral degree, considerable latitude is allowed to accommodate research interests. The following guidelines apply to students entering with a bachelor’s degree:

Course Work and Dissertation Summary

Approved Chemistry Courses (minimum) ................................................. 24
Additional Course Work ................................................................. 9
Chemistry Research ........................................................................ 0–18
Dissertation (maximum) ............................................................... 30
MINIMUM REQUIRED BEYOND BACHELOR’S DEGREE .......... 81

For students entering with a master’s degree, coursework completed for the master’s degree can fulfill a significant proportion of the 33 credit hours of required doctoral coursework. The student should be prepared to complete some additional coursework.

RESEARCH

Research areas presently of interest to chemistry department faculty include bioorganic chemistry, chemical education, environmental chemistry, geochemistry, molecular spectroscopy, nanotechnology, natural products, organometallic chemistry, pharmaceutical chemistry, physical organic chemistry, polymer chemistry, molecular modeling, renewable energy applications, solid-phase reaction kinetics, synthetic organic chemistry, and thermal methods of analysis.

Degree Programs

Applied Mathematics, B.S., M.S., Ph.D.
Biomathematics, B.S.
Mathematical Sciences, B.S.
Operations Research, M.S., Ph.D.

Undergraduate Minor Program

Computational Mathematics

Professors

Ravi P. Agarwal, Ph.D., numerical analysis, differential and difference equations, differential inequalities, fixed point theorems.

Jewgeni H. Dshalalow, Dr. Sci., real analysis, stochastic processes, queuing theory, operations research.

Cecilia A. Knoll, Ph.D., calculus mastery, differential equations, integrating technology into the curriculum.

Semen Köksal, Ph.D., mathematical biology, neural networks, dynamical systems, mathematical modeling.

Kanishka Perera, Ph.D., variational and topological methods for nonlinear partial differential equations, semi- and quasi-linear elliptic boundary value problems, problems and singularities, critical point theory, infinite dimensional Morse theory.

Syamal K. Sen, Ph.D., computational error and complexity, computational mathematics, deterministic and stochastic operations research, error-free and finite-field computation, random sequences and generators, randomized algorithms, optimizations.

Gnana B. Tenali, Ph.D., wavelet analysis, differential operators, dynamical systems.

Associate Professors

Dennis E. Jackson, Ph.D., partial differential equations, finite element methods for partial differential equations, functional analysis, scattering theory.

Tariel I. Kiguradze, Ph.D., partial differential equations, hyperbolic equations and systems, boundary value problems, qualitative theory.

Jay J. Kovats, Ph.D., elliptic and parabolic partial differential equations, diffusion processes.

Michael D. Shaw, Ph.D., nonlinear differential equations, Lyapunov stability theory, variation of parameters methods, initial time difference.

Assistant Professor

Munevver M. Subasi, Ph.D., stochastic programming, mathematical modeling, bioinformatics, combinatorial data analysis, data mining.

Professors Emeriti

George E. Abdo, Ph.D.; Frederick B. Buoni, Ph.D.; Frank C. DeSua, Ph.D.; V. Lakshmikantham, Ph.D.
Mathematical biology (biomathematics) is a highly interdisciplinary program at the intersection of mathematics, biology and computer science. The program is offered through collaboration between the mathematics and biology departments. Primarily during the freshman and sophomore years biomathematics majors complete core courses, then specialize during the junior and senior years. Specialization is based on interest in computer science, mathematics or biology, while retaining interdisciplinary training.

The interdisciplinary nature of the program enables undergraduates who are interested in combining mathematics, computer science and biology to be more competitive for graduate programs and careers in bioinformatics, biostatistics, biomedical engineering, biomathematics or medicine.

**Degree Requirements**

Candidates for the Bachelor of Science in Biomathematics must complete the minimum course requirements as outlined in the following curriculum.

During the first two years, our majors share many courses with other students. The mathematical sciences program is interdisciplinary and designed to meet the needs of students in the 21st century. At this time, applications of mathematics across disciplines routinely occur in engineering, science and industry. The curriculum includes courses in mathematics as well as applied courses from related departments. Students can choose electives that will enable them to apply mathematics to engineering, the physical sciences, biological sciences, environmental studies, social sciences and business applications. Mathematics graduates are prepared to pursue graduate work or take their place in industry along with engineers and scientists.

* Mathematics students take MTH 4990 Undergraduate Research (Q).
Elective Restrictions
Positioning of electives is unrestricted. At least 30 elective credits must be at the 3000 level or above. Choices of electives are subject to approval by the student’s adviser. Mathematics electives must include at least one proof-based course in addition to the required courses in linear algebra and analysis.

Applied area electives must be taken from a single area of application. Typically, this means from a single department or program other than mathematics. Any science or engineering program can be chosen. Suitably chosen management courses (courses with mathematics prerequisites) can also be taken.

**TOTAL CREDITS REQUIRED** 123

Note: Upper-division mathematics courses may be offered in alternate years.

**Elective Restrictions**

Choices of electives are subject to approval by the student’s adviser. Mathematics electives must include at least one proof-based course in addition to the required courses in discrete mathematics and analysis. Examples of suitable courses include Abstract Algebra (MTH 4015) and Advanced Geometry (MTH 4801).

Applied area electives must be taken from a single area of application. Typically, this means from a single department or program other than mathematics. Any science or engineering program can be chosen. Suitably chosen management courses (courses with mathematics prerequisites) can also be taken. At least 30 elective credits must be at the 3000-level (or higher).

**MINOR PROGRAM**

A minor in computational mathematics is offered through the department. A complete policy statement regarding minors can be found in the Academic Overview section. Information about current minor offerings is available through the individual colleges/departments.

**Computational Mathematics** (21 credit hours)

*CSE 4082 may be substituted for MTH 4082.

MTH 2000-level (or higher) courses must be used to satisfy the remaining 21-credit hour total if more than nine credit hours of the courses for the minor are named courses in the student’s major.
The master's degree program in mathematics is designed to produce mathematicians with competence in analysis who have breadth and versatility in mathematics and its applications in related fields. To this end, students entering the master's program in mathematics are required to select an applied field in which they wish to develop some expertise and to complete six credit hours toward the degree from approved courses outside the mathematics curriculum. In addition, the master's program is organized so that students will have the freedom to select some of their mathematics electives to develop their own special interests and to complement their choice of applied field. The flexibility in the elective part of the curriculum allows some students the opportunity to achieve a breadth of experience in mathematics and its uses in physical and engineering sciences, computer science or operations research. At the same time, it will allow other students to achieve more knowledge in a particular area in which they may wish to develop expertise. In either case, the program is organized to help students obtain an appropriate background for industrial employment or to pursue further graduate studies toward the doctoral degree. In either case, students will benefit from the range of options that are available in the applied mathematics master's program.

Students are encouraged to consider which combination of elective mathematics courses are appropriate for their choice of applied specialization and to discuss the program with their advisers as soon as graduate study begins.

**Admission Requirements**

Applicants should have the equivalent of an undergraduate major in mathematics and must have completed undergraduate courses in differential equations and statistics, and have proficiency in a high-level programming language. (Programming languages are noncredit courses for graduate mathematics students.) Applications from graduates with undergraduate majors in the physical sciences or graduate students seeking a second master's degree are welcome. In such cases, however, it may be necessary for applicants to take courses in addition to the 30-credit degree requirement in those subjects where their backgrounds are deficient.

**Degree Requirements**

The master of science degree in mathematics requires a minimum of 30 credit hours of work beyond the bachelor's degree. For the thesis option, six credit hours of thesis are required. The thesis should demonstrate the candidate's abilities in the areas of reading and understanding mathematical literature, independent learning and written expression. Theses that combine mathematics with its applications in a related field are encouraged. A nonthesis option candidate must successfully complete a final program examination.

**Curriculum**

**Core Areas (18 credit hours)**

- Analysis ................................................................. 6
- Linear Algebra ...................................................... 3
- Numerical and Computational Mathematics ............... 3
- Probability and Statistics ....................................... 3
- Differential Equations ........................................... 3

**Electives (6 credit hours)**

Courses in mathematics or in other scientific or engineering courses with a high degree of mathematical content. Six credit hours of electives can be devoted to writing a thesis, except in the case of students pursuing a fast track or accelerated master's program. The selection of elective courses must have the approval of the department head.

**Applied Field (6 credit hours)**

This requirement consists of courses outside the mathematics program. The applied field courses must be at the 5000-level or above. The selection of applied field courses must have the approval of the department head. Normally, only those subjects involving an appropriate degree of mathematical content are approved as applied field courses in a mathematics program.

**Master's Thesis (6 credit hours)**

The thesis is expected to be completed in two terms. The master's thesis in mathematics is expected to be a thorough investigation of a well-defined problem.

**Operations Research, M.S.**

**Admission Requirements**

Applicants should have the equivalent of an undergraduate major in mathematics and must have completed undergraduate courses in differential equations and statistics, and have proficiency in a high-level programming language. (Programming languages are noncredit courses for graduate mathematics students.) Applications from graduates with undergraduate majors in the physical sciences or graduate students seeking a second master's degree are welcome. In such cases, however, it may be necessary for applicants to take courses in addition to the 30-credit degree requirement in those subjects where their backgrounds are deficient.

**Degree Requirements**

The master of science degree in mathematics requires a minimum of 30 credit hours of work beyond the bachelor's degree. For the thesis option, six credit hours of thesis are required. The selection of elective courses must have the approval of the department head.

**Applied Field (6 credit hours)**

This requirement consists of courses outside the mathematics program. The applied field courses must be at the 5000-level or above. The selection of applied field courses must have the approval of the department head. Normally, only those subjects involving an appropriate degree of mathematical content are approved as applied field courses in a mathematics program.

**Master's Thesis (6 credit hours)**

The thesis is expected to be completed in two terms. The master's thesis in mathematics is expected to be a thorough investigation of a well-defined problem.
algebra, and computer literacy must be demonstrated by testing or suitable coursework.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements

The master of science degree can be pursued with either a thesis or nonthesis option; each requires 30 credit hours. Under the thesis option, up to six credit hours of thesis may be granted in place of electives toward the required 30 credit hours and an oral defense is required. The nonthesis option requires a final program examination. Courses taken to satisfy admission prerequisites cannot be counted toward the degree requirements.

Curriculum

The program’s curriculum is designed to provide breadth with some flexibility to accommodate the diversity of backgrounds typically found in an operations research program. Greater flexibility is provided for the elective courses beyond the core. A student has the choice of developing greater depth in one area of specialization, aiming at eventual research in that area, or continuing to develop breadth across more than one area. By choosing courses in a related field of application, students can prepare for careers in specialty areas such as management science, actuarial science or economic modeling in addition to conventional areas of operations research.

Each student will complete a program plan that satisfies the requirements listed below, subject to approval of the department head. Substitutions are sometimes permitted.

Core Courses (12 credit hours)

MTH 5411 Mathematical Statistics I
ORP 5001 Deterministic Operations Research Models
ORP 5002 Stochastic Operations Research Models
ORP 5003 Operations Research Practice or ORP 5010 Mathematical Programming

Restricted Electives (9 credit hours from the following)

MTH 5051 Applied Discrete Mathematics
MTH 5102 Linear Algebra
MTH 5401 Applied Statistical Analysis
MTH 5412 Mathematical Statistics 2
ORP 5020 Theory of Stochastic Processes
ORP 5021 Queuing Theory

Computation Elective (3 credit hours from the following)

MTH 5301 Numerical Analysis
MTH 5305 Numerical Linear Algebra
MTH 5320 Neural Networks
ORP 5050 Discrete System Simulation

Free Electives (6 credit hours)

Nonthesis option: Three courses in areas of interest to the student as approved in the student's program plan.

Thesis option: At least one course plus up to six credit hours for a thesis. The thesis should be an in-depth study of some topic and/or problem in operations research, subject to the approval of the thesis committee.

The doctoral program in mathematics is designed to produce a mathematician with a broad background in analysis and a strong field of specialization in nonlinear analysis, applied analysis, or numerical analysis and scientific computing. This combination of training will prepare the student for a career in a variety of areas, such as government or industrial research, or academic research and teaching. Doctoral graduates have the necessary experience in areas of application to be able to work successfully with other members of multidisciplinary research teams. Graduates also have the critical ability to think independently and analytically. They are able to make significant contributions to knowledge in their chosen fields of inquiry.

A preliminary program of study should be prepared by the student and adviser during the first semester of graduate studies. The final doctoral program of study must be approved by the student’s advisory committee and program chair.

Admission Requirements

Applicants for the doctoral program in mathematics usually have a bachelor's or master’s degree in mathematics. However, applications are also invited from graduates in physical and engineering sciences. In these cases, necessary undergraduate courses have to be taken to remove deficiencies before the student enters the doctoral program. In evaluating international applicants, due consideration is given to academic standards in the country in which the graduate studies were performed. Graduate teaching assistants carry on a variety of teaching assignments and in view of this, evidence of good English-speaking skills is an important criterion in processing the applications. For admission, a student should have a superior academic record and letters of recommendation. Preference will be given to applicants who have good scores on the Graduate Record Examination.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements

The degree of doctor of philosophy (Ph.D.) is conferred primarily in recognition of the breadth of scientific accomplishment and the power to investigate scientific problems independently, rather than for the completion of a definite course of studies. Although demanding a strong mathematical orientation, the doctoral program in mathematics does not fall within the traditional boundaries of a single academic unit and the scope is quite broad. Consequently, every course in a student’s program of study is evaluated not only as to content, but also as to the way in which it complements other courses and furnishes breadth and depth to the program. The work should consist of advanced studies and scientific research that lead to a significant contribution and knowledge of a particular area.

Each student must pass a preliminary examination covering the core courses, complete an approved program of studies, pass the comprehensive examination (usually oral), complete a program of significant original research work and defend a dissertation concerning the research work completed.
General degree requirements are presented in the Academic Overview section.

Curriculum
After a bachelor's degree in mathematical sciences, a minimum of 75 credit hours is required for the doctoral program, including the courses listed below:

Core Areas (30 credit hours)
- Linear Algebra ............................................................... 3
- Real and Complex Variables ........................................... 9
- Numerical and Computational Mathematics .................. 6
- Probability and Statistics ................................................. 6
- Differential Equations .................................................... 6

Areas of Specialization (21–27 credit hours)
Areas of specialization include nonlinear analysis; stochastic analysis; optimization; numerical analysis and scientific computing; and statistics

Considerable flexibility is allowed in the selection of courses in core areas and areas of specialization. Selected course offerings from the mathematics department and other areas of science and engineering may be taken to fulfill the requirements.

Doctoral Dissertation
The dissertation consists of 24–30 credit hours of work and is expected to be completed within two years. The doctoral dissertation is expected to represent original research in mathematics. It may present new theoretical developments or new areas of application or both. The dissertation should contain results that constitute a significant contribution to the literature of the field of investigation. These results should be worthy of publication in an established technical journal.

Operations Research, Ph.D.

<td></td>
</tr>
</tbody>
</table>

The doctor of philosophy program provides a more advanced level of education, as well as demonstrated ability to perform independent research. These additional strengths should qualify the graduate for vital positions of leadership in industry, business, government and academia.

Admission Requirements
An applicant for the doctoral program will normally have completed a master’s degree in operations research or a related discipline. If the master’s degree is not in operations research, then the student will be required to take the core courses for Florida Tech’s master’s degree in operations research. These courses may be used toward fulfilling the credit requirements for the Ph.D. in operations research. Students also will be required to pass a written qualifying examination equivalent to Florida Tech’s master’s final program examination.

General admission requirements are discussed in the Academic Overview section.

Degree Requirements
A minimum of 48 credit hours beyond the requirements for the master’s degree is required to earn the doctoral degree. These credits include 24 credit hours of dissertation research in addition to normal coursework.

Each student must complete an approved program of study, pass a comprehensive examination, complete a program of significant original research, and defend a dissertation concerning the research. General degree requirements are presented in the Academic Overview section.

Curriculum
The individual doctoral program of study must be approved by the student’s doctoral committee and the program chair. Students who have not taken MTH 5051 and MTH 5102, or their equivalents, will be required to take them. Students are also required to take at least two courses from the Computation/Computer Science list.

The doctoral program in operations research does not fall within the traditional boundaries of a single discipline. The scope is broad and interdisciplinary. Consequently, every course in a student’s program of study is evaluated in terms of how it complements other courses and provides breadth and depth to the program.

Considerable latitude is permitted in course selection, provided the core requirements for operations research/mathematics/computation are met. The remaining courses are selected in collaboration with the doctoral committee according to the interests and research objectives of the student. The student may opt to concentrate study in the area of human-centered design (described below).

Computation Electives
- MTH 5301 Numerical Analysis
- MTH 5305 Numerical Linear Algebra
- MTH 5320 Neural Networks
- ORP 5050 Discrete System Simulation

Human-Centered Design
The program in human-centered design (HCD) is offered for students who wish to carry out advanced research, innovation and leadership in the academic world, as well as fill equivalent positions in industry and government. The program may be completed through one of three areas: aerospace engineering, operations research or computer science. Other research areas within the field may be pursued depending on current trends in the Human-Centered Design Institute (HCDi) of Florida Tech.

The program is designed to attract students who have the greatest potential for expanding the frontiers of knowledge and art of HCD, and in transferring this knowledge and art to others. It is open to graduate students who have a strong interest in people and are ready to learn about applied human and social sciences. HCD requires significant breadth and depth of understanding in engineering, mathematics and science, the mastery of several specialized subjects and the creativity to extend the body of knowledge and art on a particular subject through significant original research.

Each candidate is expected to publish major portions of their dissertation in refereed conferences and journals, and is strongly encouraged to actively participate in research activities of the HCDi while pursuing the degree. The student’s advisory committee and the director of the HCDi must approve the doctoral program of study.

RESEARCH

Applied Mathematics
Active areas of research in the mathematics program include methods of nonlinear analysis, qualitative and quantitative properties of nonlinear evolution equations (including differential equations with delay), integro-differential equations and stochastic differential equations, spectral theory of operators, reaction-diffusion
equations, approximation theory, applied statistics, sequential analysis, mathematical programming, combinatorial optimization, operations research, queuing theory, stochastic processes, mathematical modeling, neural networks, numerical and computational mathematics with emphasis on numerical methods for ordinary and partial differential equations, numerical algorithms and parallel processing.

**Operations Research**

Current active research in operations research include the modeling of controlled queuing systems, stochastic processes, applied statistics, design of experiments, neural networks, parallel processing and algorithms, decision-making under uncertainty, simulation, engineering management, quality control, optimization models and methods, scheduling and timetabling algorithms, applied graph theory and integer programming.

**Human-Centered Design**

The Human-Centered Design Institute (HCDI) members are faculty, permanent and visiting research scientists and graduate students conducting research in cognitive engineering, advanced interaction media, complexity analysis in human-centered design, life-critical systems, human-centered organization design and management, and modeling and simulation.

James A. Gering, M.S.

**Professors Emeriti**

Joel H. Blatt, Ph.D.; James D. Patterson, Ph.D.
UNDERGRADUATE DEGREE PROGRAMS

Physics, B.S.

Major Code: 7101  
Degree Awarded: Bachelor of Science  
Age Restriction: N  
Admission status: undergraduate  
Delivery Mode/s: classroom only  
Location/s: main campus

Physics is the discipline most directly concerned with understanding the physical world on a fundamental level. As such, it covers an extremely broad range of subjects and areas of specialization that seek to unify and understand this diversity in terms of the smallest possible number of laws and principles. A physicist therefore must receive a broad, general training in science. Mathematics, a primary tool, must be mastered as well as experimental laboratory skills. Most important is the development of a variety of problem solving skills and a critical, incisive approach to physical problems.

The curriculum includes core courses in physics, mathematics and related sciences, plus a liberal mixture of applied courses from engineering fields and an enriching selection of humanities as electives. Students considering a career in medicine or other health sciences should consider the physics preprofessional option detailed below. A degree in physics provides an excellent background for entering the health sciences.

Research is a major activity of the department, which possesses good instrumentation required for research in selected areas of physics. Participation in research programs by undergraduates is strongly encouraged. A maximum of six credit hours of research can be used to fulfill technical and free elective requirements.

Degree Requirements

Candidates for the Bachelor of Science in Physics must complete the course requirements listed in the following sample curriculum. Because the subject matter of general physics forms a critically important foundation for all advanced physics courses, the minimum grade for satisfying the prerequisite requirements for a physics major is a grade of C for each of the following courses: PHY 1001, PHY 2002, PHY 2003, PHY 2091 and PHY 2092.

Physics – Premedical Physics, B.S.

Major Code: 7159  
Degree Awarded: Bachelor of Science  
Age Restriction: N  
Admission status: undergraduate  
Delivery Mode/s: classroom only  
Location/s: main campus

This program offers the courses needed to meet the entrance requirements of essentially all schools of medicine, dentistry, osteopathic medicine, podiatry and optometry. The premedical adviser organizes a premedical evaluation committee to provide evaluation letters for students applying to medical school. Students graduating with premedical physics degrees have very high acceptance rates into medical and professional schools. Note this program is also an excellent choice for the student interested in a prelaw curriculum.

Degree Requirements

Candidates for the Bachelor of Science in Physics – Premedical Physics must complete the course requirements listed in the following curriculum. Because the subject matter of general physics forms a critically important foundation for all advanced physics courses, the minimum grade for satisfying the prerequisite requirements for a physics major is a grade of C for each of the

**Space Sciences – Astrobiology, B.S.**

**Major Code:** 7137  
**Degree Awarded:** Bachelor of Science  
**Admission Status:** Undergraduate  
**Delivery Mode/s:** Classroom only  
**Location/s:** Main campus

The space sciences undergraduate program is designed for students interested in pursuing a broad range of space-related careers, either upon completion of the bachelor’s degree program in one of the three specific areas listed below or after completing graduate studies. Emphasis in the curriculum is on achieving a broad and yet rigorous education in the basic physical, mathematical and engineering sciences as a foundation for successful entry into any of the many subfields of modern space science activity. Because basic physics and introductory space science courses form a critically important foundation for all advanced coursework in the space sciences program, the minimum grade for satisfying the prerequisite requirements for a space sciences major is a grade of C for each of the following courses: PHY 1001, PHY 2002, PHY 2003, PHY 2091, PHY 2092, SPS 1010, SPS 1020.

This program is interdisciplinary and designed to meet the needs of students intending to pursue graduate education in astrophysics, planetary sciences or biology.

**Interdisciplinary Science, B.S.

Major Code: 7035 Degree Awarded: Bachelor of Science
Age Restriction: N Admission status: undergraduate
Delivery Mode/s: classroom only Location/s: main campus

Program Chair
Laszlo Baksay, Ph.D.

Because of the increasing importance of science and technology in our daily lives, Florida Tech has recognized the need for an interdisciplinary program in the sciences that allows a student to enroll in a wide variety of science and engineering courses, supplemented by certain core courses and several carefully chosen electives. The most important characteristics of this degree are that it is flexible and tailored to the individual student's needs, and that it emphasizes broad training in science. The graduate will have a well-rounded appreciation of science and its place in society, and will have acquired specific tools for his or her career.
The bachelor's degree in interdisciplinary science is intended for students who plan graduate study in professional fields, those who are interested in a broad-based degree oriented toward the sciences or engineering, former science and engineering students who want a degree with wider scope and students seeking military careers.

Graduates normally seek employment opportunities in aerospace, environmental science, medicine and health technology, personnel administration, purchasing, development, management, the military, social work, marketing; in general, a wide variety of positions requiring an interdisciplinary background, as well as opportunities for advanced study, especially in the professional fields.

Because of the great flexibility of the interdisciplinary science program, it is important that a student plan his or her program with an adviser as soon as possible. The student's committee will be composed of those faculty deemed most appropriate to the student's goals and objectives. A committee normally consists of three members, including the adviser.

The basic requirements of the degree are given below, followed by a sample four-year program. The interdisciplinary science courses are chosen by the student to conform to his or her program plan. These courses must have the approval of the student's adviser and committee, as well as the program director. Students should start with a firm idea about the purpose of their degree and plan the program accordingly. The adviser will present some explicit four-year programs and suggest ideas about what courses are available, but each four-year program is tailored to specific needs, and therefore must be developed jointly by the student and adviser. Before enrolling for more than 30 credit hours, the student is required to file a detailed plan of study. The plan must list the courses the student wishes to take. If the objectives change, modifications of the plan of study will be allowed if approved by the student's adviser. During the final semester, as part of the capstone experience, the student is required to write and present a paper.

Degree Requirements

Communication (9 credit hours)
COM 1101 Composition and Rhetoric
COM 1102 Writing about Literature
COM 2223 Scientific and Technical Communication

Computer Science (3 credit hours)
CSE 1502 Introduction to Software Development/C++ or CSE 1503 Introduction to Software Development/FORTRAN

Humanities (12 credit hours)
HUM 2051 Civilization 1
HUM 2052 Civilization 2
HUM 3351 History of Science and Technology: Ancient and Medieval
HUM 3352 History of Science and Technology: Renaissance to Present

Mathematics (8 credit hours)
MTH 1001 Calculus 1
MTH 1002 Calculus 2

Interdisciplinary Science (44 credit hours)
At least 21 credit hours must be 3000/4000-level courses.

Liberal Arts Electives (12 credit hours)
At least 6 credit hours must be 3000/4000-level courses and at least 3 credit hours must be in the social sciences.

Physical or Life Science Electives (8 credit hours)

Technical Electives (22 credit hours)
At least 3 credit hours must be 3000/4000-level courses.

Free Electives (6 credit hours)

Capstone Seminar (1 credit hour)
Usually completed during the senior year.

Curriculum

The interdisciplinary science curriculum is extremely flexible since many students enter this major after several semesters at Florida Tech. Although program plans are typically designed on a student-by-student basis to meet individual needs and interests while fulfilling all degree requirements listed above, the following provides a general model that may be followed by students.

Freshman Year

The military science program prepares Florida Tech ROTC cadets to serve as commissioned officers in the United States Army, Army Reserve and Army National Guard. Technical, scientific and military studies are incorporated into the curriculum with emphasis on applied leadership and problem solving skills. Current freshmen and sophomores with no prior military service who seek an ROTC scholarship may attend the Leader’s Training Course between their second and third years. Students incur no service commitment on completion of this course. This 32-day camp provides students with basic military and problem solving skills, combined with physical training.

The Bachelor of Science in Interdisciplinary Science – Military Science is earned by satisfying the degree requirements listed for the bachelor's degree in interdisciplinary science and completing the advanced military science program as described under "College of Psychology and Liberal Arts." All military science (MSC) courses taken are applicable to this degree. Descriptions of the ROTC program and the sequencing and descriptions of the military science courses may also be found with the advanced military science program listing.

MINOR PROGRAM

A minor in physics is offered by the department. A complete policy statement regarding minors can be found in the Academic Overview section.

Physics (19–21 credit hours)

<table>
<thead>
<tr>
<th>Minor Code: 6101</th>
<th>Degree Awarded: none</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

*9–11 credit hours of PHY courses are required to complete the physics minor. A list of restricted elective courses of either three or four credit hours each is available from the department. Independent study, seminar and directed research courses may not be used to fulfill requirements for the minor. No more than nine credit hours applied to the minor may be named courses in the major program.

GRADUATE DEGREE PROGRAMS

Physics, M.S.

Graduate study in physics at the master's level generally follows one of two tracks. Either it aims to provide a sound core-course education in several fundamental, broad areas of physics at an advanced level to prepare the student for continued and specialized study toward the doctoral degree, or it may be directed toward preparing the student to apply his/her knowledge of physics to industry or other nonacademic environments. Coursework for the latter track tends to be more specialized and narrowly focused. The master of science program in physics attempts to serve both objectives, offering a balanced combination of basic core courses and those designed for applied physicists.

Admission Requirements

An applicant for admission should have an undergraduate degree in physics, any subfield of space sciences (astronomy and astrophysics, geosciences, planetary sciences, astrobiology) or an engineering field. All entering physics graduate students are required to be prepared in mathematics at least through vector analysis.

General admission requirements and the process for applying are presented in the Academic Overview section. The GRE scores from both the general and subject tests in physics are recommended but not required.

Degree Requirements

The master's degree is conferred on students who have satisfactorily completed a minimum of 30 semester credit hours of graduate study. A master's thesis is optional.

Master's degree students must complete the following five core courses with a grade of C or better:

**Core Courses** (15 credit hours)

<table>
<thead>
<tr>

</table>

In addition, students must take three subject courses and six semester credit hours of Thesis (PHY 5999). Students choosing to complete a nonthesis program must take two additional subject courses in place of the six semester credit hours of thesis. The subject courses must be PHY or SPS 5000-level and above, and must include at least two courses from the following:

**Subject Courses** (a minimum of 2 courses from the following)

<table>

</tbody>
</table>

Students are allowed to take at most one subject course outside the department (PHY or SPS) in addition to Mathematical Methods in Science and Engineering 2 (MTH 5202). Course substitutions must be approved by the department head and the Graduate Research and Academic Steering Panel (GRASP).

A general written examination is required in the first semester of residence for diagnosing any deficiencies in undergraduate preparation. Any deficiencies must be removed before a degree will be granted, as evidenced by this examination.

Before the master’s degree is granted, the student must pass a final oral examination administered by a committee of three or more members of the graduate faculty selected by the student and the departmental adviser and including at least one member from outside the physics department. The oral examination emphasizes, but is not necessarily restricted to, subject matter related to the field of the thesis. For students not electing to do a thesis, the oral examination covers the general areas of the student's graduate studies.
Space Sciences, M.S.

Degree Awarded: Master of Science
Admission status: graduate
Location: main campus

The space sciences graduate program stresses many subfields of space studies, such as stellar and extragalactic astrophysics, solar-terrestrial interrelation (space weather, solar energetic particles), cosmic ray physics, energetic radiation from thunderstorms and lightning on Earth and other planets, planetary science, human space exploration research and related instrumentation. Graduate study in space sciences at the master's level prepares graduates for continued and specialized study toward the doctoral degree in space-related fields as well as a wide range of scientific and technical responsibilities in industry and government.

Admission Requirements
An applicant for admission should have an undergraduate degree in any subfield of space sciences (astronomy/astrophysics, geosciences, planetary sciences, astrobiology), physics or a related engineering field. All entering space sciences graduate students are required to be prepared in mathematics at least through vector analysis. The GRE scores from both the general and subject test in physics are recommended but not required.

Degree Requirements
The master's degree is conferred on students who have satisfactorily completed a minimum of 30 semester credit hours of graduate study. A master's thesis is optional.

Master's degree students must complete the following five core courses with a grade of C or better:

Core Courses (15 credit hours)

- MTH 5201 Mathematical Methods in Science and Engineering 1
- PHY 5015 Analytical Mechanics 1
- PHY 5017 Electromagnetic Theory 1
- PHY 5030 Quantum Mechanics 1
- PHY 5082 Thermodynamics and Statistical Physics

In addition, students must take three subject courses from the list below and six semester credit hours of Thesis (SPS 5999). Students choosing to complete a nonthesis program must take two additional subject courses in place of the six semester credit hours of thesis. The subject courses must be PHY or SPS 5000-level and above, and must include at least three courses from the following:

Subject Courses (a minimum of 3 courses from the following)

- MTH 5202 Mathematical Methods in Science Engineering 2
- SPS 5010 Astrophysics 1: Stellar Structure and Evolution
- SPS 5011 Astrophysics 2: Galactic Structure and Cosmology
- SPS 5020 Space Physics 1: The Low-Energy Universe
- SPS 5021 Space Physics 2: The High-Energy Universe
- SPS 5030 Planetary Science 1: Interiors
- SPS 5031 Planetary Science 2: Atmospheres

Course substitutions must be approved by the department head and the Graduate Research and Academic Steering Panel (GRASP).

A general written examination is required in the first semester of residence for diagnosing any deficiencies in undergraduate preparation. Any deficiencies must be removed before a degree will be granted, as evidenced by this examination. Before the master's degree is granted, the student must pass a final oral examination administered by a committee of three or more members of the graduate faculty selected by the student and the departmental adviser and including at least one member from outside the physics department. The oral examination emphasizes, but is not necessarily restricted to, subject matter related to the field of the thesis. For students not electing to do a thesis, the oral examination covers the general areas of the student's graduate studies.

Interdisciplinary Science, M.S.

Degree Awarded: Master of Science
Admission status: graduate
Location: main campus

The professional interdisciplinary science master's program (PRISM) is designed to increase the student's science, technology, engineering and mathematics (STEM) expertise; add competence in business, systems engineering and communication; and provide an online learning experience. A practical real-world internship as well as a research/development experience is required.

Admission Requirements
An applicant for admission should have an undergraduate degree in a STEM field.

General admission requirements and the process for applying are presented in the Academic Overview section. GRE scores from the general and subject tests are recommended but not required.

Degree Requirements
The master's degree is conferred on students who have satisfactorily completed a minimum of 31 semester credit hours of graduate study. A thesis is optional.

Curriculum

Core Courses (13 credit hours)

- BUS 5601 Essentials of Business Development 1
- BUS 5602 Essentials of Business Development 2
- ISC 5200 Professional Interdisciplinary Science Master's Seminar
- SYS 5310 Systems Engineering Principles
- Restricted Elective (online only)

STEM Courses (12 credit hours)

Students choose from approved courses under any STEM area (science, technology, engineering, mathematics) in consultation with student's adviser.

Electives (6 credit hours)

Students may select specialized STEM courses or courses broadening the interdisciplinary component in consultation with student's adviser.

Internship/Research (0 credit hours)

Students choosing internship experience are expected to take part in an experience in industry, business or academia, or a federal agency, NGO or non-profit.

Students choosing the research experience are expected to take part in an experience in industry, a small, high-tech company; national/international research laboratory; or academia.

Thesis Option (6 credit hours)

Six semester credit hours of research substituted for the same number of semester credit hours from the STEM or elective area.
Physics, Ph.D.

Major Code: 9101
Age Restriction: N
Delivery Mode/s: classroom only
Admission Materials: GRE recommended

Degree Awarded: Doctor of Philosophy
Admission status: graduate
Location/s: main campus

General admission requirements and the process for applying are presented in the Academic Overview section. GRE scores from both the general and subject test in physics are recommended but not required. Florida Tech students who wish to continue toward the doctoral degree after completing the master’s degree (or after completing 15 semester credit hours of graduate courses) must submit a full application (fee will be waived) to the department.

Degree Requirements

Students entering the doctoral degree program with a bachelor’s degree must follow the master of science degree requirements listed above for 30 semester credit hours. Students may take six semester credit hours of Research (PHY 6090) or six credit hours of subject courses in place of Thesis (PHY 5999). Students must also complete an additional 45 semester credit hours to satisfy the doctoral program requirements as stated below.

Students entering the doctoral degree program with a master’s degree, or a continuing doctoral student with 30 approved semester credit hours of coursework must take five formal on-site Florida Tech courses (equivalent to 15 semester credit hours) and 30 semester credit hours that may include courses listed for the master’s degree, individual study, research and dissertation. A course used for a master’s degree cannot be used to fulfill the doctoral degree requirements. Course substitutions must be approved by the department head and the Graduate Research and Academic Steering Panel (GRASP).

Doctoral degree requirements are stated in the Academic Overview section, with one exception. Students must take a comprehensive written examination administered by GRASP (see the department’s graduate handbook for details). Students must take at least 15 semester credit hours of dissertation after admission to candidacy. Students may take Florida Tech formal classroom courses outside of the department (PHY or SPS) only by approval of the department head and GRASP.

Research

Physics

Current research in physics includes experimental high-energy physics, experimental and theoretical condensed matter physics, instrumentation development, theoretical and observational studies of the solar/heliospheric energetic particles and cosmic rays, physics of energetic radiations from thunderstorms and lightning, auroral and magnetospheric physics, astrophysics, engineering physics, and physics education.

Experimental research in physics is carried out in a variety of laboratories operated by the department, as well as at national and international research facilities. Facilities that are currently available to graduate students include the following laboratories.

High-Energy Physics Laboratory (HEP): The HEP experimental efforts have been centered on studying high energy hadron and lepton collisions using large particle physics experiments at major national (Fermilab and BNL) and international (CERN, Switzerland) accelerator facilities, as well as conducting basic
detector technology research and development, and high-performance grid computing in laboratories on the Florida Tech campus. Presently, work is performed on the construction and commissioning of the CMS experiment at CERN. Since 2001, the Florida Tech group has responsibilities for calibration of the hadron calorimeters, Tier-0-Tier2 data flow and validation for the Top and B physics analysis groups and precision alignment of the muon endcap detectors. The physics analyses are initially focused on measurements of the properties of the top and bottom quarks and search for new gauge bosons. With anticipated higher luminosities, our physics program will switch to search for the Higgs boson and more exotic phenomena at multi-TeV energy scale. Another main research area is the development and construction of a muon tomography system for detecting high-Z materials hidden in cargo, based on advanced micro-pattern gas detectors such as Gas Electron Multipliers. The HEP lab houses a state-of-the-art Linux-based computing cluster with about 100 CPU cores that is used for muon tomography detector simulation work and serves as a Tier-3 site on the Open Science Grid for CMS data analysis. The group also conducts research and development on advanced particle detector technology for the Super-LHC upgrade programs. In addition Florida Tech is a member of the PHENIX experiment at BNL’s Relativistic Heavy Ion Collider, which is searching for a new state of matter dubbed the “quark-gluon plasma” and the L3 collaboration at the LEP accelerator.

Quarknet: The national Quarknet educational outreach research program exposes high school physics teachers and high school students to particle physics through hands-on experimental workshops. The program has built and is operating an educational cosmic ray air shower array distributed over participating high schools in Brevard County.

Maglev Laboratory: The primary goal of this lab is the development of a new space launch system for manned and unmanned missions based on electromagnetic acceleration and levitation, in cooperation with NASA, the Florida Space Institutes, and the Advanced Magnet Laboratory, a tech-high industry partner. It houses a 43-foot magnetic levitation and propulsion demonstration track, one of a handful of such devices in the country, and the only one at an academic institution. Physics, space science and engineering students and faculty, together with researchers from the other institutions, are performing investigations in topics such as controls, aerodynamics, mechanical stability, superconducting technology and electromagnetic acceleration and levitation, to study the feasibility of maglev launch assist for rockets and future spacecraft.

Condensed Matter Physics Laboratory: The research activities at this lab include condensed matter physics, materials science, statistical physics and engineering physics. Some of the projects involve collaboration with members of Materials Science and Nanotechnology Institute directed by the dean of the College of Science. One of activities is to understand nucleation, growth mechanisms, and evolution of microstructures and nanostructures in materials, to optimize these structures, and finally to design new structures in materials. Another activity is to link processing and structures to various properties of materials, and to predict property of materials by multiscale modeling. Materials include hard and soft materials such as alloys, nanocomposites, colloids and polymers. Other activities also include exploration of the application of statistical physics to anomalous diffusion and relaxation processes in heterogeneous system, biophysics, materials science and econophysics.

Scanning Probe Microscopy Laboratory: This facility provides researchers with the ability to image the surface structure of a solid, and to probe the electronic surface properties of a material down to the atomic scale, using a scanning tunneling microscope (STM). This laboratory also investigates novel applications of the STM (e.g., in the field of electrochemistry) and is interested in the development of other types of scanning probe microscopes.

Space Sciences

Current research activity in space sciences includes: gravitational redshifts and evolution of white dwarf stars, observations and modeling of cataclysmic variables and other close binary systems, astrophysical jets and accretion phenomena, observational cosmology, cosmic-ray modulation/propagation and its interactions with the interstellar medium, energetic radiation from terrestrial and planetary lightning discharges, solar wind-magnetosphere interactions and energetic particle observations and human space exploration research.

Experimental research in space science is carried out in a variety of laboratories operated by the department, as well as at national and international research facilities. Facilities that are currently available to graduate students include the following laboratories:

Astronomy and Astrophysics Laboratory: Astrophysicists and students work on a wide variety of topics, including the evolution of white dwarf stars, simulations of cataclysmic variable systems, astrophysical fluid dynamics, accretion phenomena, the physics and evolution of active galactic nuclei and their jets, cosmology, solar and stellar atmospheres, ultraviolet spectroscopy and astronomical instrumentation. The astrophysics group includes professors working in a variety of different wavebands from the radio to x-rays, including observations with the Hubble Space Telescope, Chandra X-ray Observatory, and the Far-Ultraviolet Spectroscopic Explorer satellite, as well as ground-based optical and radio observatories. Members of the group are involved in the development of instrumentation for the CanariCam Science Team, a guaranteed-time program on the 10.4-m Gran Telescopio Canarias, the world’s largest optical telescope. Resources include Linux computers, astronomical data reduction packages including IRAF, AIPS and CIAO.

Ortega 0.8-m Telescope: This is the largest research telescope in the state of Florida and forms the heart of the F.W. Olin Observatory. Installed in 2007, it sits on the rooftop of the F. W. Olin Physical Sciences Center. Equipped with a large-format CCD imaging system and spectrograph, it is available for student and faculty astronomy and astrophysics research projects as well as monthly public guest nights.

SARA 0.9-m Telescope at Kitt Peak National Observatory and 0.6-m Telescope at Cerro Tololo Interamerican Observatory: Florida Tech is the administrative institution for the Southeastern Association for Research in Astronomy (SARA). See “Research” in the Institution Overview section for more information.

Geospace Physics Laboratory (GPL): This facility is a collection of four major laboratories that host all of Florida Tech’s space physicists, planetary scientists and their students’ research projects. These labs are outlined below (GPL—A-D). In a joint operation with UCLA of California, Florida Tech is hosting a 10-site meridional array of magnetometers along the east coast of the United
Space Exploration Research Laboratory (GPL-D): This lab supports a research program focused on enabling sustained human space exploration and on the origin, distribution and future of life in the universe. The lab includes imaging systems, optics, calibration and test equipment, a large clean room, and other hardware used to support the development of space instrumentation. It has a high-performance computing system for modeling and simulation, and a ground control system to receive data and send commands to the International Space Station. Some of the labs activities are housed in the new Space Life Sciences Laboratory at the Kennedy Space Center, where airspace can be controlled for rocket-triggering.

Cosmic Rays and Space Weather Laboratory (GPL-B): This lab uses a network of workstations to study the energetic particle environment in the solar system. Some of the particles are cosmic rays from the galaxy, while some are produced by the sun during solar flares. By studying these particles, we try to understand the energetic phenomena in the galaxy or on the sun that affect the radiation environment at Earth. Gaining such understanding is one of our main goals to protect astronauts working in space and the electronic components on satellites. In addition, analysis of the COSPIN experiment on Ulysses and several other spacecraft datasets (Wind, SOHO, SAMPEX, ACE and RHESSI) in support of investigating the energetic particles environment with the solar system are conducted in this lab.

Visualization and MHD Simulation Laboratory (GPL-C): This lab has state-of-the-art 3D visualization systems, video-processing workstations and shared memory multiprocessor systems for use in research and in the classroom. The systems use active and passive 3D displays to illustrate a variety of 3-dimensional topics. Some of the projects being pursued include classroom visuals such as 3D rendering of the Solar System, our Galaxy, and the Earth-Moon-Sun system. Scientific research in MHD modeling of space weather simulations is also conducted using 3D rendering as an analysis tool for studying the near-Earth space environment. Researchers are also investigating some cognitive science topics related to how the brain processes 3D imagery and how this may affect educational techniques in the physical sciences.

Teaching and Research Assistantships
The department offers a number of teaching and research assistantships each year. Teaching assistants participate in laboratory instruction and/or assisting faculty in the preparation of teaching materials and grading. Research assistants work on research projects that are often related to their own master's thesis or doctoral dissertation investigations. Both types of assistantships are awarded on a competitive basis, and provide graduate course fee remission and a stipend for living expenses. To increase the probability of receiving an assistantship, applicants are advised to apply as early as possible in the academic year prior to requested admission.

DEPARTMENT OF SCIENCE AND MATHEMATICS EDUCATION
David E. Cook, Ph.D., Head

Degree Programs
Computer Education, M.S.
Concentration in:
Instructional Technology
Elementary Science Education, M.Ed.
Environmental Education, M.S.
Mathematics Education, B.S., M.S., Ed.S., Ph.D.
Middle Grades Mathematics and Science, B.S.
Science Education
Biology, B.S.
Chemistry, B.S.
Earth and Space Sciences, B.S.

Undergraduate Minor Program
Education
Professor
David E. Cook, Ph.D., informal science education, computers in education, chemistry education, education policy.
Associate Professors
Michael A. Gallo, Ph.D., statistics, research design, educational theory, computer technology and networking.
Cecilia A. Knoll, Ph.D., calculus mastery, differential equations, integrating technology into the curriculum.
Thomas J. Marcinkowski, Ph.D., environmental education, curriculum and instruction, research and evaluation design.
Instructor and Director, Teacher Education
Debra S. Blenis, M.S.
Professors Emeriti
Richard E. Enstice, Ph.D.; Robert H. Fronk, Ph.D.; Robert F. Richmond, Ed.S.
The recommended program plan is given below. Teacher certification areas may be Mathematics (6–12) or Middle Grades Mathematics (5–9). All applicants must meet the current entrance requirements for teacher-education programs established by the Florida Department of Education. Formal application is made during the sophomore year. Application procedures and requirements may be found in the department’s student handbook.

A full year of student teaching during the senior year provides the student with many experiences encountered in the teaching profession. To graduate from a teacher-education program approved by the Florida Department of Education, the student must complete all requirements established pursuant to Section 1004.04 F.S., which includes competencies and skills for teacher certification as prescribed in Rule 6A04.0021, F.A.C., as well as additional content and instructional practices listed in Sections 1004.04(2), (3) and (5), F.S. In addition, students must complete the coursework from an approved program plan with a minimum cumulative GPA of 2.5, demonstrate competence in all 12 Florida Education Accomplished Practices, pass all of the Florida Teacher Certification Examinations (General Knowledge, Professional Education and Subject Area) and earn a minimum 3.0 grade point average for 18 credit hours of student teaching.

Teacher preparation programs in the state of Florida are required by Title II, section 207, of the Higher Education Act to make public their Institutional Report Cards. Florida Tech’s report card may be found online at www.fit.edu/education.

The recommended program plan is given below. Teacher certification area: Biology (6–12). All applicants must meet the current entrance requirements for teacher-education programs established by the Florida Department of Education. Formal application is made during the sophomore year. Application procedures and requirements may be found in the department’s student handbook. A full year of student teaching during the senior year provides the student with many experiences encountered in the teaching profession. To graduate from a teacher-education program approved by the Florida Department of Education, the student must complete all requirements established pursuant to Section 1004.04 F.S., which includes competencies and skills for teacher certification as prescribed in Rule 6A04.0021, F.A.C., as well as additional content and instructional practices listed in Sections 1004.04(2), (3) and (5), F.S. In addition, students must complete the coursework from an approved program plan with a minimum cumulative GPA of 2.5, demonstrate competence in all 12 Florida Education Accomplished Practices, pass all of the Florida Teacher Certification Examinations (General Knowledge, Professional Education and Subject Area) and earn a minimum 3.0 grade point average for 18 credit hours of student teaching.

Teacher preparation programs in the state of Florida are required by Title II, section 207, of the Higher Education Act to make public their Institutional Report Cards. Florida Tech’s report card may be found online at www.fit.edu/education.

**PSY 1411** Introduction to Psychology  

*Requires passing grade on the General Knowledge Test of the Florida Teacher Certification Examination prior to registration.

**Note:** At least nine (9) credit hours of the education minor must be taken in the science/math education department at Florida Tech.

**Athletics Coaching Certification**

The Athletics Coaching Certificate from the Florida Department of Education is appropriate for those students who plan to coach and/or are seeking a career in the fields of sports. Those holding Florida Professional Teaching Certificates may receive the Coaching Endorsement from the Department of Education. Others may receive the certificate.

Florida Department of Education administrative rule 6A-4.0282 (specific authority 1001.02, 1012.55, 1012.56 FS) states that nine (9) semester credit hours of athletics coaching training are needed to obtain an athletics coaching endorsement or certificate. An additional requirement is a valid cardiopulmonary resuscitation (CPR) course completion card or certificate issued by the American Heart Association, or the American Red Cross or equivalent CPR course completion card or certificate issued by an entity approved by the Florida Department of Health pursuant to rule 64E-2.038, F.A.C. All of these requirements are met by successfully completing the following curriculum.

**Required Courses**

<table>

**Admission Requirements**

An applicant must have a bachelor's degree from an accredited college or university in mathematics or science, or in an area in which state certification is sought.

**Degree Requirements**

A minimum grade point average of 3.0 must be maintained throughout the program. Students must also satisfy a field experience requirement that can be met either by a concurrent part- or full-time teaching position or by completing concurrent field experiences courses taken either at Florida Tech or another accredited university. Students must pass the Professional Education Florida Teacher Certification Examination and an oral final program examination, which is given in the last semester of enrollment.

**Curriculum**

At least 10 courses (minimum 30 credit hours) are required, as follows:

<table>

</tr>
</tbody>
</table>

**TOTAL CREDITS REQUIRED:** 30

All courses except EDS 5071, EDS 5072 or EDS 5073, and the electives must be taken at Florida Tech. Electives and a methods course in an area other than mathematics or science may be transferred from graduate-level studies elsewhere, subject to faculty approval.
Graduate Certificate—Teaching*

The graduate certificate is for students seeking an alternative route to professional certification in Florida. This certificate program is a subset of the MAT degree program and is designed expressly for individuals who hold bachelor’s degrees in content areas and are current teachers with a 3-year temporary teaching certificates. It consists of six graduate courses that prepare teachers for state certification. The certificate may be completed in two regular terms and a summer session. The credit hours may be applied within five years of completion to the MAT.

Admission Requirements
An applicant must have a bachelor’s degree in mathematics or science, or in an area in which state certification is sought, from an accredited college or university, and be currently teaching with temporary certification.

Certificate Requirements*
The Graduate Certificate requires passing the six courses (18 credit hours) listed below with a grade point average of at least 3.0. All courses must be taken at Florida Tech.

EDS 5051 Methods and Management of Middle and High School Teaching ............................................. 3
EDS 5055 Foundations and Management of Classroom Instruction ................................................. 3
EDS 5060 ESOL Teaching Strategies ................................................................. 3
EDS 5067 Measurement and Evaluation ................................................................. 3
EDS 5071 Methods and Strategies of Teaching Middle and High School Science or EDS 5072 Methods and Strategies of Teaching Middle and High School Mathematics or EDS 5073 Methods and Strategies for Teaching Specific Middle and High School Content ............................................. 3
EDS 5135 Reading in the Content Area ................................................................. 3

TOTAL CREDITS REQUIRED ........................................................................ 18

*Curriculum guided by state requirements and subject to change.

Elementary Science Education, M.Ed.

Major Code: 8118
Degree Awarded: Master of Education
Age Restriction: N
Delivery Mode/s: classroom, lab
Admission Materials: 3 letters of recommendation, résumé, objectives
Location/s: main campus

This degree program is designed for the elementary school teacher and focuses on the theory and practice of teaching, and provides professional development that is applicable to teaching science in the elementary classroom.

Admission Requirements
This program is designed for individuals who already hold a bachelor’s degree or better, and are currently teaching in grades 1–6. Applicants should have a GPA of 3.0 or better for regular admission and should submit a résumé, statement of objectives and three letters of recommendation.

Degree Requirements
The degree of Master of Education in Elementary Science Education is conferred on students who have successfully completed 30 credit hours including a six-credit thesis or 33 credit hours including three credit hours of research. The thesis option concludes with an oral final program examination or a written final program examination. The nonthesis option concludes with an oral final program examination of an oral final program examination and a written final program examination. The credit hours of appropriate transfer credit may be applied.

Curriculum
The following core courses are required:

EDS 5051 Methods and Management of Middle and Secondary School Teaching ................................................................. 3
EDS 5070 Educational Statistics* ........................................................................ 3
EDS 5095 Essentials of Educational Research* .................................................. 3
EDS 5203 Theories and Trends in Education* ................................................... 3
EDS 5226 Introduction to Computers in Education ............................................. 3
EDS 5227 Educational Software Evaluation and Design ................................... 3

*These three courses must be taken at Florida Tech. Exceptions may be considered only through a written petition to be reviewed by the department’s graduate faculty.
Students selecting the option with thesis take the six core courses plus six credit hours of thesis (EDS 5999), a current topic in computer education course (EDS 5299) and one computer science or computer education elective, for a total of 30 credit hours.

Students selecting the option without thesis take the six core courses plus a current topic in computer education course (EDS 5299), one computer science or computer education elective, three credit hours of research (EDS 5081) and six credit hours of electives, for a total of 33 credit hours.

Any schedule that meets the above requirements within a seven-year period is acceptable. Any combination of part-time and/or full-time semesters can be used, as well as any combination of evening and summer courses.

Environmental Education, M.S.

Major Code: 8119
Degree Awarded: Master of Science
Age Restriction: N
Delivery Mode/s: classroom, field
Admission Materials: 3 letters of recommendation, résumé, objectives

Program Chair
Thomas J. Marcinkowski, Ph.D.

Environmental education is for individuals with experience and/or active interest in formal programs (i.e., schools) and nonformal programs (e.g., nature/environmental centers, agencies, parks, gardens, zoos and museums). The program is designed to provide graduate education in science and environmental content, as well as to expand and improve environmental education teaching skills. To this end, the program includes graduate coursework in environmental content, in environmental education and in educational research.

The master's degree program includes coursework in an environmental content concentration. Each concentration is designed around a unifying theme for the purpose of expanding environmental knowledge and skills pertinent to that theme (e.g., a disciplinary theme such as ecology; a natural resource theme such as estuaries; or a problem-oriented theme such as water quality). Concentrations reflect the academic and research strengths of programs within the university. Programs that offer coursework for inclusion in environmental content concentrations include ecology and marine biology; environmental science and environmental resources management; biological, chemical and geological oceanography; coastal zone management and marine environmental science. Further, to provide breadth to the development of knowledge and skills, concentrations are designed to include coursework in each of the following areas: ecology or another foundational science; environmental problems; environmental fieldwork or monitoring; and environmental policy, planning or management.

The master's degree program also includes coursework in environmental education foundations and methods. The foundations course is designed to develop and expand knowledge of the field and of educational practices in the field from diverse perspectives. The methods courses are designed to develop and improve teaching skills. To accommodate students' differing backgrounds and interests, course projects and assignments allow students to develop and apply these skills in relevant contexts or settings.

Admission Requirements
The master's program is designed for individuals holding bachelor's degrees in areas of science, environmental studies, environmental interpretation or K–12 education. All entering students are expected to have a background in the sciences and in education that will permit them to successfully complete graduate coursework. Individuals for whom this may be a concern are encouraged to discuss this directly with the program chair.

General admission requirements and the process for applying are presented in the Academic Overview section, which also contains information on financial assistance.

Degree Requirements
The master of science degree is conferred on students who have successfully completed 33 credit hours, as specified in the following section. The program concludes with an oral final program examination or an oral final program examination and a written final program examination.

Curriculum
The following courses are required:
EDS 5070 Educational Statistics*................................. 3
EDS 5081 Research 1.................................................. 3
EDS 5095 Essentials of Educational Research*.............. 3
EDS 5410 Foundations of Environmental Education.......... 3
EDS 5420 Methods in Ecology and Environmental Content.. 3
EDS 5430 Methods for Environmental Problems and Issue Investigation.......................... 3
EDS 5440 Methods for Citizenship and Environmental Responsibility.................................................. 3

*These two courses must be taken at Florida Tech. Exceptions may be considered only through a written petition to be reviewed by the department's graduate faculty.

In addition to these seven courses, a minimum of 12 credit hours (i.e., usually four content courses) must be taken in a chosen environmental content concentration. With departmental approval, up to six credit hours of 3000- and 4000-level coursework may be included in the content concentration.

Any schedule that would meet these requirements within a seven-year period is acceptable. Any combination of part-time and/or full-time semesters can be used, as well as any combination of daytime, evening, and weekend and summer courses. The following is one example of a common schedule.

FALL CREDITS
EDS 5410 Foundations of Environmental Education.................. 3
                           Environmental Content Concentration Course .................. 3
                           .......................................................... 6

Mathematics Education, M.S.

Major Code: 8127 Degree Awarded: Master of Science
Age Restriction: N Admission status: graduate
Delivery Mode/s: classroom, field Location/s: main campus
Admission Materials: résumé, objectives

The master’s program for students holding bachelor’s degrees in mathematics includes advanced graduate training in mathematics, in addition to courses designed to develop and improve education knowledge and skills. One program offers regular graduate work in mathematics and education while also providing the necessary course requirements for state certification of secondary school teachers. A second program is designed for those not wishing to teach in a secondary school and does not lead to certification.

The program for students holding bachelor’s degrees in mathematics education includes courses for teachers in mathematics, in addition to advanced graduate courses in mathematics education. The mathematics courses are designed to develop and upgrade subject matter knowledge. The mathematics education courses complement previous educational experience.

Admission Requirements
The master’s program is designed for individuals holding bachelor’s degrees either in mathematics or in middle or secondary school mathematics education.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
The master of science degree requires successful completion of 30 credit hours including six credit hours of thesis, or 33 credit hours including three credit hours of research. The thesis option concludes with an oral thesis presentation/defense. The nonthesis option concludes with an oral final program examination or an oral final program examination and a written final program examination.

Curriculum
The following courses are required and must be taken at Florida Tech. Exceptions may be considered only through a written petition to be reviewed by the department’s graduate faculty:

EDS 5070 Educational Statistics ............................................. 3
EDS 5095 Essentials of Educational Research ..................... 3
EDS 5203 Theories and Trends in Education ........................ 3

A minimum of three mathematics courses (9 credit hours) is required.

A minimum of two additional graduate education courses (6 credit hours) and six credit hours of Thesis (EDS 5999) are required for the thesis option.

A minimum of three additional graduate education courses (9 credit hours), three credit hours of electives and three credit hours of Research (EDS 5081) are required for the nonthesis option.

With departmental approval, up to six credit hours of senior-level courses can be applied toward the master of science program.

Any schedule that would meet these requirements within a seven-year period is acceptable. Any combination of part-time and/or full-time semesters may be used, as well as any combination of evening and summer courses. The following is an example of a common schedule (nonthesis option):

FALL

Science Education, M.S.

Major Code: 8120 Degree Awarded: Master of Science
Age Restriction: N Admission status: graduate
Delivery Mode/s: classroom, field Location/s: main campus
Admission Materials: résumé, objectives

This master’s program is for students holding bachelor’s degrees in science education or science and includes graduate science courses in a selected science concentration in addition to advanced graduate courses in science education. The science courses are designed to develop and upgrade subject matter knowledge in specific, selected areas of science. The science education courses will complement previous educational experience.

Admission Requirements
The master’s program is designed for individuals holding bachelor’s degrees either in areas of science or in secondary school science education.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
The master of science degree is conferred on students who have successfully completed 30 credit hours including six credit hours of thesis, or 33 credit hours including three credit hours of research. The thesis option concludes with an oral thesis presentation/defense. The nonthesis option concludes with an oral final program examination or an oral final program examination and a written final program examination.

Curriculum
The following courses are required, and must be taken at Florida Tech. Exceptions may be considered only through a written petition, reviewed by the department’s graduate faculty:

EDS 5070 Educational Statistics ......................................... 3
EDS 5095 Essentials of Educational Research ..................... 3
EDS 5203 Theories and Trends in Education ........................ 3

A minimum of three science courses (9 credit hours) is required.

These courses are to be in the selected concentration area: biology, chemistry, environmental science, physics, psychology, oceanography/earth science, general science (for middle- and junior-high school teachers) or another science or technical area approved by the department. Science courses offered through the science education department specifically for teachers, may also be used to partially fulfill the science course requirement. The general science concentration involves several areas and will be constructed based on the student’s needs.
A minimum of two additional graduate science education courses (6 credit hours) and six credit hours of Thesis (EDS 5999) are required for the thesis track.

A minimum of three additional graduate science education courses (9 credit hours), three credit hours of electives and three credit hours of Research (EDS 5081) are required for the nonthesis track.

With departmental approval, up to six credit hours of senior-level courses can be applied toward the master of science program.

Any schedule that would meet these requirements within a seven-year period is acceptable. Any combination of part-time and/or full-time semesters can be used, as well as any combination of evening and summer courses. Following is an example of a common schedule (nonthesis option):

Science Education – Informal Science Education, M.S.

Major Code: 8117
Degree Awarded: Master of Science
Age Restriction: N
Admission status: graduate
Delivery Mode/s: classroom, field
Location/s: main campus
Admission Materials: résumé, objectives

The informal science education program is offered for students interested in science education that occurs outside of the formal school setting.

This master's program is for students holding bachelor's degrees in science education or science and includes graduate science courses in a selected science concentration in addition to advanced graduate courses in science education. The science courses are designed to develop and upgrade subject matter knowledge in specific, selected areas of science. The science education courses will complement previous educational experience.

Admission Requirements
The master's program is designed for individuals holding bachelor's degrees either in areas of science or in secondary school science education.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
The master of science degree is conferred on students who have successfully completed 30 credit hours including six credit hours of thesis, or 33 credit hours including three credit hours of research. The thesis option concludes with an oral thesis presentation/defense. The nonthesis option concludes with an oral final program examination or an oral final program examination and a written final program examination.

Curriculum
The following courses are required, and must be taken at Florida Tech. Exceptions may be considered only through a written petition, reviewed by the department's graduate faculty:

EDS 5070 Educational Statistics……………………………………………… 3
EDS 5095 Essentials of Educational Research……………………………... 3
EDS 5203 Theories and Trends in Education……………………………….. 3

A minimum of three science courses (9 credit hours) is required. These courses are to be in the selected concentration area: biology, chemistry, environmental science, physics, psychology, oceanography/earth science, general science (for middle- and junior-high school teachers) or another science or technical area approved by the department. Science courses offered through the science education department specifically for teachers, may also be used to partially fulfill the science course requirement. The general science concentration involves several areas and will be constructed based on the student’s needs.

The thesis track includes nine credit hours in the selected science concentration, Informal Science Education (EDS 5270) and either Informal Science Education Internship (EDS 5272) or Informal Science Education Project (EDS 5274), plus six credit hours of thesis (EDS 5999).

The nonthesis track includes nine credit hours in the selected science concentration, Informal Science Education (EDS 5270), Informal Science Education Internship (EDS 5272), Informal Science Education Project (EDS 5274), three credit hours of elective, and three credit hours of Research (EDS 5081).

With departmental approval, up to six credit hours of senior-level courses can be applied toward the master of science program.

Any schedule that would meet these requirements within a seven-year period is acceptable. Any combination of part-time and/or full-time semesters can be used, as well as any combination of evening and summer courses.

Mathematics Education, Ed.S.

Major Code: 8207
Degree Awarded: Specialist in Education
Age Restriction: N
Admission status: graduate
Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives

The primary emphasis of the specialist in education degree is on the development of specific competencies needed in mathematics education.

Admission Requirements
The applicant to the specialist in education program must hold a master's degree in mathematics or education, with mathematics as the teaching area.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
A candidate for the specialist in education degree must maintain a grade point average of 3.0 or better in a 30-credit-hour program. Although research methodologies are included in the curriculum,
no thesis is required. A three-member committee appointed by the department head and approved by the graduate programs office gives a final examination in the last semester of enrollment. A student can transfer up to 12 hours of graduate credit from other approved institutions offering at least the specialist in education degree.

**Curriculum**

Candidates for the specialist in education degree must complete 30 credit hours of coursework beyond the master’s degree as follows:

**Current Research and Methodologies in Mathematics Education (9 credit hours)**

Must be taken at Florida Tech; exceptions may be considered only through a written petition to be reviewed by the department’s graduate faculty.

- EDS 5070 Educational Statistics ................................. 3
- EDS 5095 Essentials of Educational Research ...................... 3
- EDS 5203 Theories and Trends in Education ....................... 3

**Mathematics (9 credit hours)**

The candidate must have earned a minimum of 21 master’s degree-eligible credit hours in mathematics beyond the bachelor’s degree. These credit hours include the nine specifically required for the specialist degree and any other credit hours from approved post-baccalaureate mathematics courses.

**Education (9 credit hours)**

Approved by the head of the department.

**Electives (3 credit hours)**

Each student chooses an elective to fit a particular certification and/or interest area.

**Science Education, Ed.S.**

The doctor of philosophy (Ph.D.) program is designed to provide increased competence in mathematics, mathematics education and research. Recipients gain the appropriate knowledge and skills for positions in college and university mathematics education programs; teaching, administration and supervisory posts in state and local school systems; positions teaching mathematics in community colleges, liberal arts colleges and introductory mathematics courses in universities; and as research directors in mathematics education.

The focus of the Ph.D. is typically theoretical, and dissertation research is oriented for the student going into a university graduate teaching and research setting.

**Admission Requirements**

An applicant to the doctoral program in mathematics education must have a master’s degree in mathematics or mathematics education, with a cumulative grade point average of at least 3.2 on a 4.0 scale. Although not required, at least three years’ teaching experience is also highly recommended.

General admission requirements and the process for applying are presented in the *Academic Overview* section.

**Degree Requirements**

A minimum of 42 credit hours beyond the master’s degree is required to earn the doctoral degree. These credit hours include the following core courses that must be taken at Florida Tech (exceptions may be considered only through a written petition to be reviewed by the department’s graduate faculty).

- EDS 5070 Educational Statistics ........................................ 3
- EDS 5095 Essentials of Educational Research ...................... 3
- EDS 5203 Theories and Trends in Education ....................... 3
- EDS 6070 Statistics for Educational Research ..................... 3
Additionally, students must satisfactorily complete three semester credit hours of Readings in Educational Research (EDS 6000) and three semester credit hours of Research Practicum (EDS 6010). The remainder of the requirements include at least 18 semester credit hours of Dissertation (EDS 6999), at least six semester credit hours of electives and completion of the major technical area requirement.

General degree requirements are presented in the Academic Overview section.

Curriculum

Major Technical Area Requirement
A minimum of 21 master's degree-eligible semester credit hours beyond the bachelor's degree must be taken in mathematics. These may include courses from previous graduate degrees as well as courses taken as part of the Ph.D. program.

Comprehensive Examination Requirement
Written comprehensives and oral comprehensives must be completed in the same semester. The doctoral comprehensive examinations are given in the last full week of September and January.

Science Education, Ph.D.

Major Code: 9124
Degree Awarded: Doctor of Philosophy
Age Restriction: N
Admission status: graduate
Delivery Mode/s: classroom, field
Location/s: main campus
Admission Materials: 3 letters of recommendation, résumé, objectives

The doctor of philosophy (Ph.D.) program is designed to provide increased competence in science, science education and research. Recipients gain the appropriate knowledge and skills for positions in college and university science education programs; teaching, administration and supervisory posts in state and local school systems; positions teaching science in community colleges, liberal arts colleges and introductory science courses in universities; and as research directors in science education.

The focus of the Ph.D. is typically theoretical, and dissertation research is oriented for the student going into a university graduate teaching and research setting.

Admission Requirements
An applicant to the doctoral program in science education must have a master's degree in a field of science, technology, aeronautics or science education, with a cumulative grade point average of at least 3.2 on a 4.0 scale. Although not required, at least three years' teaching experience is also highly recommended. An applicant with a major technical area in aeronautics must also have FAA certification and enough practical experience to qualify as a professional in the aviation field.

General admission requirements and the process for applying are presented in the Academic Overview section.

Degree Requirements
A minimum of 42 credit hours beyond the master's degree is required to earn the doctoral degree. These credit hours include the following core courses that must be taken at Florida Tech (exceptions may be considered only through a written petition to be reviewed by the department's graduate faculty).

- EDS 5070 Educational Statistics................................................................. 3
- EDS 5095 Essentials of Educational Research.......................................... 3
- EDS 5203 Theories and Trends in Education........................................... 3
- EDS 6070 Statistics for Educational Research........................................... 3

Additionally, students must satisfactorily complete three semester credit hours of Readings in Educational Research (EDS 6000) and three semester credit hours of Research Practicum (EDS 6010). The remainder of the requirements include at least 18 semester credit hours of Dissertation (EDS 6999), at least six semester credit hours of electives and completion of the major technical area requirement.

General degree requirements are presented in the Academic Overview section.

Curriculum

Major Technical Area Requirement
A minimum of 21 master's degree-eligible semester credit hours beyond the bachelor's degree must be taken in a chosen major technical area that includes aeronautics, biology, chemistry, computer science, engineering, environmental science, oceanography/earth science, physics or psychology. These may include courses from previous graduate degrees as well as courses taken as part of the Ph.D. program and must include Legal and Ethical Issues in Aviation (AVM 5101) if the major technical area is aeronautics.

Comprehensive Examination Requirement
Written comprehensives and oral comprehensives must be completed in the same semester. The doctoral comprehensive examinations are given in the last full week of September and January.

RESEARCH

Departmental research includes study in a variety of aspects of computer education, environmental education, mathematics education and science education.
COURSE DESCRIPTIONS

Courses are listed alpha-numerically. The 1000, 2000, 3000 and 4000 series are undergraduate courses. The 5000 series are graduate courses that can also be taken by undergraduates with cumulative grade point averages of 2.75 or higher, who have satisfied all listed prerequisites and whose registration is approved by the department head or program chair responsible for the course. The 6000 series courses are restricted to graduate students only. Courses below 1000 are developmental in nature, are not counted in GPA calculations and do not count toward any Florida Tech degree.

COURSES THAT MAY BE TAKEN IN FULFILLMENT OF UNDERGRADUATE CORE REQUIREMENTS are designated as follows: CL: computer literacy requirement; COM: communication elective; HU: humanities elective; Q: quality enhancement plan; SS: social science elective. These designations follow the course descriptions. Other courses that satisfy Undergraduate Core Requirements are identified by the course prefix: any MTH course can be used toward meeting the mathematics requirement; and any AVS, BIO, CHM or PHY course, or EDS 1031 or EDS 1032, toward meeting the physical/life sciences requirement.

AVIATION HUMAN FACTORS

AHF 3101 INTRODUCTION TO HUMAN FACTORS (3 credits). Introduces the field of engineering psychology (ergonomics) that examines the interaction of humans and machines. Analyzes aircraft accidents and industrial safety concepts, and the design of aircraft, computers and other products.

AHF 5101 HUMAN FACTORS IN MAN-MACHINE SYSTEMS (3 credits). Introduces the range of human factors topics and the principles and knowledge that underpin the aviation human factors specialist’s approach. Discusses employment opportunities and gives insight into the systems approach methodology of the aviation human factors specialist.

AHF 5202 HUMAN PERFORMANCE 2 (3 credits). Examines information processing models; learning and memory; mental models and schema theory; signal-detection theory; human error; language and warnings; and knowledge elicitation for expert system development. Prerequisites: AHF 5201.

AHF 5402 SITUATIONAL AWARENESS AND DECISION-MAKING (3 credits). Studies the theory of situational awareness and advanced decision-making and applies them to the complex flight environment. Addresses individual, collaborative and distributed awareness, and decision-making and available flight deck information. (Requirement: Graduate program chair approval.)

AHF 5403 COGNITIVE ENGINEERING AND HUMAN-CENTERED DESIGN OF LIFE-CRITICAL SYSTEMS (3 credits). Explores major cognitive engineering and human-centered design principles applicable to life-critical systems. Addresses human-centered automation, human workload, cognitive modeling, situational awareness, risk taking and flight management system design and evaluation.

AHF 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

AHF 5990 DIRECTED RESEARCH (3 credits). Students conduct independent research or participate in ongoing research or other projects under faculty supervision. Requires submission and approval by the division director of a written proposal containing performance expectations and evaluation criteria. (Requirement: Instructor approval.)

AHF 5991 SENSATION AND PERCEPTION (3 credits). The philosophical underpinnings of scientific views of sensation and perception. Hypothesized psycho-physiological mechanisms of sensation. Covers the nature of human perceptual processes, distortion and illusion with respect to real-world aviation human factors considerations.

AHF 5999 THESIS RESEARCH (3-6 credits). Preparation and submission of a research thesis on a selected topic in aviation human factors under the direction of the graduate faculty. (Requirement: Instructor approval.)

ACADEMIC SUPPORT CENTER

ASC 1000 UNIVERSITY EXPERIENCE (1 credit). Helps first-year students adjust to the university and acquire essential academic survival skills (classroom behavior, academic honesty, study skills, etc.) that enhance academic and social integration into college.

ASC 1005 STRATEGIES FOR SUCCESS AT FLORIDA TECH (1 credit). Helps first-time freshmen recover and improve academically during their second semester, particularly those who are on academic probation because of poor first semester performance.

ASC 1006 MASTERING ELEARNING (1 credit). Helps students new to Florida Tech and online learning to adjust to the university and acquire essential academic survival skills (classroom behavior, academic honesty, study skills, etc.) that enhance academic integration into college. Requirement for all Florida Tech Online students. (Requirement: Must be enrolled in University Alliance.)

ASC 1051 CHEMISTRY REVIEW (1 credit). Increases proficiency in understanding chemistry through on-one-on-one instruction.

ASC 2000 PEER LEADERSHIP (1 credit). Provides juniors and seniors the opportunity to mentor first-year freshmen in ASC 1000 in academic success. Requires one hour of lecture and one to two hours teaching/mentoring in ASC 1000 per week. Covers the development of strong leadership skills. May be repeated for credit. (Requirement: Junior standing and instructor approval.) Prerequisites: ASC 1000.

AEROSPACE ENGINEERING

See Mechanical/Aerospace Engineering (MAE)

AVIATION FLIGHT

AVF 1000 PRIVATE PILOT CERTIFICATE (2 credits). Provides all required flight instruction to prepare the student for the FAA private pilot practical test. FAA private pilot certificate awarded on successful completion of the private pilot written examination, all prerequisites and corequisites, and this course. Noncredit for College of Aeronautics flight majors. (Requirement: Student pilot certificate, class II or higher medical certificate. Corequisites: AVT 2001.)

AVF 1001 FLIGHT 1 (2 credits). Provides initial flight instruction for private pilot candidates through the first solo cross-country flight. (Requirements: FAA student pilot certificate, class III or higher medical certificate.) Corequisites: AVT 1001.

AVF 1002 FLIGHT 2 (2 credits). Provides continuing flight instruction to prepare students for the FAA private pilot practical test. FAA private pilot certificate awarded on successful completion of the FAA private pilot written examination, all prerequisites and corequisites, and stage one of this course. Includes cross-country flight training for added experience. (Requirement: FAA Private Pilot Certificate, Class II or higher medical certificate.) Corequisites: AVT 1003.

AVF 1003 COMMERCIAL PILOT STAGE ONE (2 credits). Provides extended cross-country flight training to students holding a private pilot certificate. Increases total flight experience in preparation for advanced certificates and ratings. (Requirement: FAA private pilot certificate, class II or higher medical certificate and program chair approval.) Corequisites: AVT 1002.

AVF 1006 HELICOPTER PRIVATE PILOT (3 credits). Provides initial helicopter flight instruction for helicopter private pilot candidates. Prepares students for the FAA rotorcraft-helicopter practical test. (Requirements: FAA student pilot certificate and class III or higher medical certificate.) Corequisites: AVT 1006.

AVF 2001 FLIGHT 3 (2 credits). Provides instrument flight instruction in aircraft and flight training devices to prepare the student for the FAA instrument rating practical test. FAA instrument rating awarded on successful completion of the FAA instrument rating written examination, all prerequisites and corequisites, and this course. (Requirement: FAA Private Pilot Certificate, Class II or higher medical certificate.) Prerequisites: AVF 1002. Corequisites: AVT 2111.

AVF 2002 FLIGHT 4 (2 credits). Provides advanced flight instruction in primary and complex aircraft to prepare students for the FAA commercial pilot practical test. FAA commercial pilot certificate awarded on successful completion of the FAA commercial pilot written examination, all prerequisites and corequisites, and this course. (Requirement: FAA Private Pilot Certificate with instrument rating, Class II or higher medical certificate.) Prerequisites: AVF 2001. Corequisites: AVT 2002 or AVT 2111.

Course Descriptions 215
AVF 2006 INSTRUMENT PILOT (2 credits). Aircraft and simulator (flight training device) instrument flight procedures in preparation for the FAA instrument rating. Taken in lieu of portions of AVF 1002 and AVF 2001 for those students with previous flight experience. (Requirements: FAA Private Pilot Certificate, 50 flight hours of PIC cross-country experience.)

AVF 2007 HELICOPTER INSTRUMENT PILOT (2 credits). Provides instrument flight training in helicopters and flight training devices to prepare the student for the FAA instrument helicopter rating practical test. Awards FAA instrument helicopter rating on successful completion of the FAA instrument helicopter rating written examination, co- and prerequisites, and this course. (Requirements: FAA helicopter private pilot certificate and class III or higher medical certificate.) Prerequisites: AVF 1006, Corequisites: AVT 2007.

AVF 2008 HELICOPTER COMMERCIAL PILOT (3 credits). Provides cross-country flight training to helicopter private pilot license-holders. Increases total flight in preparation for the FAA commercial pilot-helicopter practical test. Commercial pilot-rotorcraft helicopter certificate awarded by FAA on successful completion of the FAA commercial pilot-helicopter knowledge and flight tests. (Requirements: FAA private pilot-helicopter with instrument rating and FAA class II or higher medical certificate.) Prerequisites: AVF 2007, Corequisites: AVT 2008.

AVF 2102 FLIGHT 4 COMMERCIAL PILOT- AIRPLANE MULTIENGINE LAND (2 credits). Provides advanced flight instruction in single-engine and multi-engine land aircraft to prepare students for the FAA commercial pilot practical test. FAA commercial pilot-airplane multiengine land certificate awarded on successful completion of the FAA commercial pilot written examination, all prerequisites and corequisites, and this course. (Requirements: FAA private pilot ASEL certificate with instrument rating, FAA class II or higher medical certificate.) Prerequisites: AVF 2001. Corequisites: AVT 2002.

AVF 2105 HELICOPTER EXTERNAL LOAD OPERATIONS (1 credit). Provides advanced flight instruction in the methods and techniques of carrying a load outside the helicopter. Emphasizes flight safety. Includes short- and long-line helicopter external load operations. (Requirement: FAA private pilot-helicopter rating.) Prerequisites: AVF 1004, AVT 1003.

AVF 3001 FLIGHT INSTRUCTOR-AIRPLANE (2 credits). Training for commercial and instrument-rated pilots to qualify for the FAA Certified Flight Instructor Certificate. Upon successful completion of this course and the required FAA knowledge tests, the student is awarded the Certificate. (Requirement: FAA Commercial Flight Instructor Certificate with Instrument Rating, prerequisite course and instructor approval.) Prerequisites: AVT 3101.

AVF 3002 FLIGHT INSTRUCTOR-INSTRUMENT (2 credits). Prepares certified flight instructors to become instrument flight instructors. Ground instruction and flight in the instructor's seat develops skills in analyzing student procedures and maneuvers in all instrument flight procedures. Students must pass the FAA knowledge test and flight test. (Requirement: FAA Flight Instructor-Airplane Certificate.)

AVF 3003 STUDENT TEACHING FOR FLIGHT INSTRUCTORS (2 credits). Practical application of flight training skills. Students plan and conduct flight training under the supervision of a senior instructor. Includes the use of audiovisual aids, flight training devices and aircraft. (Requirement: Associate degree, FAA Flight Instructor Certificate and program chair approval.)

AVF 3004 COMPLEX INSTRUMENT FLIGHT TRAINING (2 credits). Training in complex instrument aircraft using a combination of dual flight and pilot-in-command instrument cross-country flights. Experience in instrument flight and operations into busy air terminals. Reviews basic instrument flying, air-traffic control procedures and instrument approaches. (Requirement: FAA Instrument Rating.)

AVF 3005 TECHNICALLY ADVANCED INSTRUMENT FLIGHT TRAINING (2 credits). Provides ground and flight training for IFR operations in a technically advanced aircraft. The technically advanced aircraft includes primary flight display, multifunction display and GPS navigation system. (Requirement: FAA Instrument Rating.)

AVF 3006 HIGH PERFORMANCE AIRPLANE TRANSITION TRAINING (1 credit). Provides ground and flight training to qualify pilots for a high-performance aircraft logbook endorsement. (Requirement: FAA private pilot certificate.)

AVF 3008 AEROBATIC FLIGHT (1 credit). Provides ground and flight training in basic aerobatic flight maneuvers, recovery from unusual flight attitudes and familiarity with conventional landing-gear aircraft. (Requirement: FAA Private Pilot Certificate and 100 flight hours or program chair approval.)

AVF 3009 INTERMEDIATE AEROBATIC FLIGHT (1 credit). Continues the basic aerobatic training course. Develops basic aerobatic skills to enable students to perform complex aerobatic routines. (Requirement: Prerequisite course or program chair approval.) Prerequisites: AVF 3008.

AVF 3010 INTERNATIONAL FLIGHT OPERATIONS TRAINING (1 credit). Provides ground and flight training for flight operations outside the U.S. Covers FAA, FCC, U.S. Customs and the Bahamas government regulations. Includes over-water operations, international weather and international flight planning. Student is responsible for landing and custom fees. (Requirement: FAA instrument rating.)

AVF 3012 CONVENTIONAL GEAR TRANSITION TRAINING (1 credit). Provides ground and flight training to qualify pilots for a conventional/tail wheel-type aircraft logbook endorsement. (Requirement: FAA Private Pilot Certificate.)

AVF 3013 HELICOPTER FLIGHT INSTRUCTOR (3 credits). Provides training for helicopter commercial- and instrument-rated pilots to qualify for the FAA certified flight instructor-helicopter certificate. Certificate awarded by FAA on successful completion of this course and the required FAA knowledge and flight tests. (Requirements: FAA commercial pilot-helicopter instrument rating and instructor approval.) Prerequisites: AVT 3101.

AVF 3014 HELICOPTER FLIGHT INSTRUCTOR-INSTRUMENT (2 credits). Prepares certified flight instructors to become instrument flight instructors in helicopters. Develops skills in analyzing student procedures and maneuvers in all instrument flight procedures through ground instruction and flight in the instructor's seat. Requires passing the FAA knowledge test and flight test. (Requirement: FAA flight instructor-helicopter certificate.)

AVF 3101 FLIGHT INSTRUCTOR-SINGLE-ENGINE ADD-ON TO FLIGHT INSTRUCTOR-MULTIENGINE LAND (2 credits). Qualifies a flight instructor-airplane multiengine land to add an additional flight instructor-airplane single-engine land rating. Provides a combination of flight and ground training. Awards the additional rating on successful completion of prerequisites and this course. (Requirements: FAA commercial pilot-AMEL certificate, FAA class II or higher medical certificate.) Prerequisites: AVF 2102.

AVF 4001 HELICOPTER FLIGHT INSTRUCTOR-INSTRUMENT (2 credits). Prepares multiengine-rated pilots to become multirioplane flight instructors. Emphasizes ground instruction and flight in the instructor's seat to develop skill in analyzing student procedures and maneuvers. (Requirement: FAA Commercial Pilot Certificate with Multiengine Rating and FAA Flight Instructor Certificate or prerequisite course.) Prerequisites: AVF 4001.

AVF 4002 FLIGHT INSTRUCTOR-MULTIENGINE (2 credits). Prepares multiengine-rated pilots to become multirioplane flight instructors. Emphasizes ground instruction and flight in the instructor's seat to develop skill in analyzing student procedures and maneuvers. (Requirement: FAA Commercial Pilot Certificate with Multiengine Rating and FAA Flight Instructor Certificate or prerequisite course.)

AVF 4003 AIR TAXI FLIGHT TRAINING (2 credits). Teaches the duties of pilot-in-command and second-in-command in air taxi flight operations and provides multiengine instrument flight training for air taxi competency. Encompasses ground instruction and training in multiengine flight simulators and light twin-engine airplanes. (Requirement: FAA Commercial Pilot Certificate, Instrument and Multiengine Ratings or prerequisite course.) Prerequisites: AVF 4001.

AVF 4006 ADVANCED MULTIENGINE CREW OPERATIONS (2 credits). Provides 25 hours pilot-in-command and 25 hours second-in-command multiengine flight time in extended cross-country operations into busy air terminals within the U.S. Emphasizes pilot-in-command and second-in-command duties under flight instructor supervision. Also provides experience in a variety of airspace, terrain, weather and challenging situations. (Requirement: Program chair approval.) Prerequisites: AVF 4003.

AVF 4007 HELICOPTER MOUNTAIN FLYING (1 credit). Provides the theory and practice of helicopter operations in mountainous/high altitude conditions. Emphasizes safety techniques in rotary wing operations in challenging environments such as high density altitude conditions. (Requirement: FAA private pilot-helicopter rating.)

AVF 4009 HELICOPTER TURBINE TRANSITION (1 credit). Provides advanced flight instruction in larger, turbine-powered helicopters such as the Bell 206 Jet Ranger. Includes the challenges associated with flying a turbine-engine aircraft. Emphasizes maximum performance takeoffs, auto-rotations and emergency procedures. (Requirement: FAA private pilot-helicopter rating.) Prerequisites: AVF 1004, AVT 1003.

AVF 4090 SPECIAL TOPICS IN FLIGHT TRAINING (0-3 credits). Topics vary by semester and may include advanced instrument flight, advanced aerobatics and advanced crew resource management. Flight fees vary depending on topic and flight hours required. May be repeated for a maximum of six credits. (Requirement: Program chair approval.)
AVM 4102 INITIAL FLIGHT INSTRUCTOR CERTIFICATE IN A MULT ENGINE LAND AIRPLANE (2 credits). Qualifies commercial, airplane multiengine land, instrument-rated pilots for an initial FAA certified flight instructor, multiengine land airplane certificate. Certificate awarded on successful completion of the required FAA knowledge tests, all prerequisites and this course. (Requirements: FAA commercial pilot airplane multiengine land certificate, class II or higher medical certificate and instructor approval.) Prerequisites: AVF 2102, AVT 3010.

AVF 4500 COMMERCIAL PILOT CERTIFICATE AND TYPE RATING (3 credits). Provides all required simulator, flight training device and instruction to prepare for the FAA commercial pilot and type rating practical tests. Adds FAA type rating to pilot certificate on successful completion of course. (Requirements: Private pilot certificate; multiengine-land, instrument rating and program chair approval.) Prerequisites: AVT 4201, AVT 4202.

AVIATION MANAGEMENT

AVM 2401 AVIATION FISCAL MANAGEMENT (3 credits). Introduces basic financial management principles in an aviation industry context. Topics include financial document analysis, forecasting, financing, asset management and mergers. Uses spreadsheet, presentation, word processing and Internet search software tools to prepare and analyze financial reports and solve financial problems. (CL)

AVM 3201 AVIATION PLANNING (3 credits). Introduces the student to the requirements, issues and processes involved in aviation planning. Includes in-depth study of the sources of aviation data, forecasting methods, the airport master planning process and environmental issues and requirements. (Requirement: Junior standing.)

AVM 3202 AIRPORT DESIGN (3 credits). Includes analysis and application of FAA standards for airport design. Emphasizes the airspace components. Also includes airport capacity calculations; movement area geometry; pavement, runway, and taxiway design. (FAR Part 77), approach and departure gradients, terminal building concepts and heliports. Prerequisites: AVM 3201.

AVM 3302 MULTIMODAL TRANSPORTATION (3 credits). Surveys the development and operation of land, water and air transportation systems. Discusses principles of logistics, transportation economics and intermodal traffic management, emphasizing air traffic. Includes transportation management in both the private and public sectors.

AVM 3303 TRANSPORTATION LOGISTICS (3 credits). Studies transportation and logistics management as a discipline concerned with efficient materials flow through the global industrial and economic system. Emphasizes managerial aspects of air transportation and logistics systems and serves as specialized education for those who plan careers in transportation or logistics. (Requirement: Junior standing in College of Aeronautics.)

AVM 3501 SPECIAL TOPICS IN AVIATION MANAGEMENT (3 credits). Topics of special interest offered when student interest and staffing permit. Topics announced prior to registration. May be repeated for a maximum of six credits. (Requirement: Division director approval.)

AVM 4201 AVIATION ADVANCED COMPUTER APPLICATIONS (3 credits). Teaches the application of specialized software packages used in the aviation industry. Includes land-use management, airport and airway simulations and geographical information systems. (CL) Prerequisites: AVM 3202.

AVM 4204 CAD FOR AIRPORT ENVIRONMENTS (3 credits). Teaches AutoCAD applications, its interfaces, concepts, terminology and specialized conflict analysis and airfield planning simulation software packages used in the aviation industry. Includes the three-dimensional airspace analysis and Simtra Pathplanner software programs. (CL) Prerequisites: AVM 3202.

AVM 4301 AVIATION LABOR LAW AND EMPLOYMENT STANDARDS (3 credits). Studies government regulation of aviation employment standards and labor-management practices in negotiating and administering collective bargaining agreements. Examines private and public sector labor relations with specific application of labor law to the varied aspects of the aviation industry.

AVM 4302 AVIATION LAW (3 credits). Overviews the fundamentals of aviation law. Emphasizes factors guiding operational decision making by aviation managers and professional pilots to maximize exposure to legal liability.

AVM 4303 GENERAL AVIATION OPERATIONS AND MANAGEMENT (3 credits). Presents operational and managerial aspects of general aviation. Emphasizes corporate aviation. Includes fixed base operations (FBO), flight training, corporate aviation, general aviation aircraft, business aircraft ownership and management methods, and regulations associated with general aviation operations such as 14 CFR Parts 91 and 135. Prerequisites: AVM 2401 or BUS 3401.

AVM 4401 INTERNATIONAL AIR COMMERCE (3 credits). Studies the geographic, economic, social and political environment of international air commerce. Includes the trend to globalization, technology transfer, legal environments and the effect of geography on business and politics.

AVM 4501 AIR TRANSPORTATION MANAGEMENT (3 credits). Surveys the development of the air transportation system leading to the modern organization and functions of airlines and general aviation business. Studies the route structure, scheduling, pricing and fleet selection strategies in the solution of typical operational problems. (Requirement: Senior standing.)

AVM 4502 AVIATION BUSINESS SIMULATION (3 credits). Applies business management concepts and techniques to the decision-making and problem-solving processes and situations in an aviation business. Uses operations research techniques, process analysis, forecasting, and computer and mathematical modeling as tools. (Q) Prerequisites: AVM 4501.

AVM 4600 AVIATION MANAGEMENT INTERNSHIP (5 credits). Covers management training within the aviation industry. Requires a minimum of a full academic term during the senior year. For credit, this internship must be followed by AVF 4603. May be repeated for a maximum of 10 credits. (Requirement: Completion of junior year major requirements, cumulative GPA of 2.8 or higher and faculty committee approval.)

AVM 4602 INDEPENDENT STUDY IN AVIATION MANAGEMENT (3 credits). Provides outstanding students an opportunity to pursue independent study on selected subjects to a depth not otherwise available in the curriculum. Requires preparation of a formal written paper and an oral examination. May be repeated for a maximum of six credits. (Requirement: 2.8 cumulative GPA, division director approval and senior standing.)

AVM 4603 AVIATION MANAGEMENT SEMINAR (1 credit). Students present formal oral and written reports on their management internship to students and faculty for comment and critique. Mandatory in the first semester after completion of AVM 4600. May be repeated for a maximum of two credits.

AVM 4701 AIRPORT MANAGEMENT (3 credits). Studies modern airports, including their roles, functions and status in the national air transportation system; sponsorship and management alternatives; management of airport development, operations and business matters; and discussion of current and emerging public airport issues. (Requirement: Senior standing.) Prerequisites: AVM 3202.

AVM 5000 FUNDAMENTALS OF AVIATION PLANNING AND DESIGN (5 credits). Introduces issues, requirements and processes involved in aviation planning, design and software applications. Studies the sources of aviation data, forecasting methods, the airport master planning process and environmental issues and requirements. Does not meet graduate degree requirements. (Requirement: Division director approval.)

AVM 5101 LEGAL AND ETHICAL ISSUES IN AVIATION (3 credits). Uses current issues as vehicles for study of the legal and moral concepts that influence developments in both national and international air law. Addresses legal and ethical considerations directly confronting the aviation professional through case studies. Prerequisites: AVM 4302.

AVM 5102 AIRPORT DEVELOPMENT (3 credits). Addresses capital project development issues at airports, emphasizing project definition, funding, project administration and coordination, marketing and property management of airside and landside facilities. Prerequisites: AVM 4701.

AVM 5103 AIRPORT OPERATIONS (3 credits). Addresses requirements, responsibilities and methods of major U.S. and international airports. Studies both FAA and ICAO standards regarding air- and land-side operations, operational safety, maintenance and construction, security and emergency preparedness. Requires a case study or research paper. Prerequisites: AVM 4701.

AVM 5104 AVIATION ECONOMICS AND FISCAL MANAGEMENT (5 credits). Focuses on the fiscal management of airports (financial management, operating and capital budgeting, business relationships, capital funding sources and mechanisms) and selected financial issues of airlines and others in the aviation industry. (Requirement: Instructor approval.)

AVM 5105 AVIATION PLANNING AND ANALYSIS TECHNIQUES (3 credits). Teaches use of special software to evaluate compliance of airports with FAA safety, efficiency and land-use compatibility guidelines. Includes noise compatibility, imaginary surface design, airport and airway simulations and geographical information systems. Prerequisites: AVM 4701.

AVM 5199 ADVANCED AVIATION MANAGEMENT INTERNSHIP (5 credits). Provides advanced management of, or research in, aviation-related operations or enterprises with approved industrial or governmental organizations. Requires a detailed written professional analysis of the experience. (Requirement: Program chair approval.)

AVM 5501 CASE STUDIES AND SPECIAL TOPICS IN AVIATION MANAGEMENT (1-3 credits). Studies in depth a specific case or topic in aviation management. (Requirement: Program chair approval.)

AVM 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)
AVM 5998 ADVANCED AVIATION RESEARCH PROJECT (3 credits). A capstone course requiring individual research into an aviation-related topic, issue or problem appropriate to the student’s area of concentration. Conducted under the supervision of a graduate faculty member and culminates in a formal written and oral report. (Requirement: Program chair approval.)

AVM 5999 THESIS (3-6 credits). Studies in depth a specific aviation issue. Requires an oral presentation to faculty prior to formal defense of thesis. (Requirement: Program chair approval.)

AVIATION SCIENCE

AVS 1101 AVIATION CHEMICAL SCIENCE (3 credits). Introduces the basic principles of general chemistry to include elements, compounds, states of matter, chemical bonds, the periodic table and applications to aviation.

AVS 1102 INTRODUCTION TO AVIATION CHEMICAL SCIENCE (1 credit). Introduces chemistry fundamentals as applied to aviation activities and aeronautical studies. Includes discussion of corrosion, batteries, fuels, lubricants, deicing chemicals, oxygen generation, aircraft coatings and the environmental footprint of aviation activities.

AVS 1201 AVIATION METEOROLOGY (3 credits). Initial course in meteorology for flight students and aviation professionals. Includes meteorological codes, charts and aviation bulletins, and identification of potentially hazardous in-flight weather conditions. Also addresses atmospheric circulation, stability, convection, moisture, air masses and fronts.

AVS 1202 INTRODUCTION TO AVIATION PHYSIOLOGY (1 credit). Introduces the effects of flight on human functional capability. Explores hypoxia, hyperventilation, self-imposed stress, disorientation and other physical consequences of flight.

AVS 2101 AVIATION PHYSICAL SCIENCE (3 credits). Introduces the basic principles of physics directly applicable to aviation including properties of matter, mechanics, vibration, wave motion, heat, sound, electricity, magnetism and optics. Prerequisites: MTH 1000 or MTH 1001.

AVS 2102 AERODYNAMICS (3 credits). Presents basic aerodynamic factors affecting aircraft design and performance. Major topics include atmospheric properties, lift, drag, thrust, aircraft performance, stability and control, high-speed aerodynamics, operating strength limitations, and aerodynamics of specific flying problems. Prerequisites: AVS 2101 or PHY 1001.

AVS 2222 AVIATION PHYSIOLOGY (3 credits). Introduces the effects of flight on human functional capability. Explores hypoxia, hyperventilation, self-imposed stress, disorientation and other physical consequences of flight.

AVS 3201 AVIATION METEOROLOGY 2 (3 credits). Advanced course in meteorology for flight students and aviation professionals. Addresses hazardous weather conditions associated with synoptic weather systems and basic prediction techniques for flight planning. Also addresses seasonal weather patterns and associated hazardous flying conditions. Prerequisites: AVS 1201 or OCN 2407.

AVS 4000 AVIATION PHYSIOLOGY LABORATORY (1 credit). Allows the student to experience the biophysical and biochemical reactions of the body to loss of pressurization in flight. Students experience the personal effects of hypoxic hypoxia and trapped gas expansions in a certified hypobaric chamber following FAA approved flight profiles. (Requirement: Current FAA Airmen Medical Certificate.) Corequisites: AVS 2222 or AVS 5203.

AVS 4201 FLIGHT OBSERVATION LABORATORY (1 credit). Provides nonflight students experience in the flight operations environment. Includes observation of pre- and postflight briefings, participation as an observer on training flights and related activities, emphasizing human factors and safety. (Requirement: Program chair approval.)

AVS 4202 UNMANNED AERIAL SYSTEMS (3 credits). Introduces the applications and technologies of unmanned aerial systems (UAS). Includes the challenges of UAS integration into controlled airspace, crew qualifications and training, and safety. (Requirement: Senior standing.) Prerequisites: AVT 2001 or AVT 2201.

AVS 4304 AVIATION SECURITY (3 credits). Presents civil aviation security measures required of all airports and airlines engaged in international civil aviation operations. Includes international and U.S. regulatory requirements, current security issues, threat analysis and technological developments. Introduces maritime, trucking, rail and mass transit security. (Requirement: Junior standing in the College of Aeronautics.)

AVS 5201 AVIATION METEOROLOGY THEORY AND PRACTICE (3 credits). Covers selected aviation meteorology topics in depth including stability, causes and manifestations of turbulence and mesoscale convective complexes. Also covers wind shear and microbursts, and their impact on aviation. Prerequisites: AVS 1201 or AVS 3201 or OCN 2407.

AVS 5203 IMPACT OF AVIATION ON HUMAN PHYSIOLOGY (3 credits). Explores the biophysical and biochemical, blood gas chemistry, and neurological and pulmonary reactions to flight. A special analysis of human reactions to many of the extremes of flight. (Requirement: Instructor approval or prerequisite course.) Prerequisites: AVS 2222.

AVS 5204 AVIATION SAFETY ANALYSIS (3 credits). Provides aviation and selected non-aviation professionals with a strong background in aviation safety analysis. The material and methods studied, including a variety of safety databases, provide a foundation for safety management, safety program development, team performance analysis and personnel resource management. Prerequisites: AVT 4301.

AVS 5205 AVIATION STATISTICS (3 credits). Explores a variety of quantitative data analysis procedures applied to available aviation databases (NASDAC, ASRS, BTS, NTSB) and other aviation-related problem sets. Emphasizes parametric and nonparametric techniques. (Requirement: Graduate program chair approval.) Prerequisites: AVS 4301.

AVS 5206 AVIATION SECURITY (3 credits). Vigorously examines post-9/11 U.S. and global national security issues. Reviews selected aviation-related case studies in terrorism and hijacking to help identify contemporary and emerging threats. (Requirement: Instructor approval.)

AVS 5207 AVIATION SAFETY MANAGEMENT SYSTEMS (3 credits). Provides in-depth study of aviation safety management systems (SMS). Includes quality management principles, process-based safety risk management and safety assurance and proactive safety culture. Also covers predictive safety management tools and methods including SMS implementation strategies. (Requirements: Senior standing and prerequisite course or instructor approval.) Prerequisites: AVT 4301.

AVS 5500 CASE STUDIES AND SPECIAL TOPICS IN AVIATION SCIENCE (1-3 credits). Studies in depth a specific case or topic in aviation science. (Requirement: Program chair approval.)

AVS 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

AVS 5999 THESIS (3-6 credits). Preparation and submission of a research thesis on a selected topic in aviation science under the direction of the graduate faculty. (Requirement: Program chair approval.)

AVIATION TECHNOLOGY

AVT 1001 AERONAUTICS 1 (3 credits). Provides basic aeronautics instruction for all students. Prepares flight students for the FAA private pilot written examination. Includes aircraft components, basic aerodynamics, airports, air traffic control, airspace, regulations, performance, weight and balance, aeromedical factors, aviation weather and air navigation. Corequisites: AVS 1201.

AVT 1002 AERONAUTICS 2 (3 credits). Provides advanced instruction for private pilot candidates in visual flight rules, flight planning and navigation in a complex air space system. Also provides initial ground instruction in FAA commercial pilot written examination topics such as advanced aerodynamics and advanced avionics, including the global positioning system (GPS). Prerequisites: AVT 1001.

AVT 1006 HELICOPTER BASIC FLIGHT PRINCIPLES (3 credits). Provides basic helicopter aeronautics instruction for rotorcraft private pilot candidates. Prepares flight students for the FAA private pilot-helicopter written examination. Includes aircraft components and helicopter flight principles. Corequisites: AVF 1006.

AVT 1007 HELICOPTER TRANSITION PRIVATE PILOT ADD-ON (2 credits). Provides helicopter aeronautics instruction for private pilot candidates who have previously completed the requirements for the FAA fixed-wing private pilot written examination. Prepares flight students for the FAA private pilot/helicopter transition written examination. (Requirement: Prerequisite of AVT 1001 or equivalent.) Prerequisites: AVT 1001. Corequisites: AVT 1006.

AVT 1111 AERONAUTICS 1 (3 credits). Provides academic training for a Private Pilot Certificate. Includes principles of flight, FAA regulations, visual flight rules, aircraft systems and performance, meteorology, navigation, aviation physiology and flight planning. Requires a score of 70 percent or higher on the FAA course completion examination.

AVT 1112 AERONAUTICS 2 (3 credits). Provides academic instruction for an instrument rating. Includes principles of instrument flight, air traffic control, IFR procedures, analyses of weather information, IFR planning, emergency procedures and pilot decisions. Requires a score of 70 percent or higher on the FAA course completion examination. Prerequisites: AVF 1001, AVT 1111.

AVT 1303 AVIATION HISTORY (1 credit). Surveys the significant technological, political and historical events and the people who shaped the international aviation industry. Focuses on aviation development in the United States.

AVT 2001 AERONAUTICS 3 (3 credits). Prepares flight students for the FAA instrument rating written examination. Includes flight instruments, attitude instrument flying, navigation systems, regulations, air traffic control, airspace, aviation weather, flight planning, and departure, en route, and approach charts and procedures. Prerequisites: AVT 1002.
AVT 2002 AERONAUTICS 4 (3 credits). Provides continuing academic instruction to prepare flight students for the FAA commercial pilot written examination. Also includes technically advanced aircraft systems and multiengine ground instruction. Prerequisites: AVT 1002, AVT 2001.

AVT 2007 HELICOPTER INSTRUMENT GROUND TRAINING (3 credits). Prepares helicopter flight students for the FAA instrument-helicopter rating examination. Includes flight instruments, attitude instrument flying, navigation systems, regulations, air traffic control, airspace, aviation weather, flight planning and departure, en route and approach charts and procedures. Prerequisites: AVT 1006.

AVT 2008 HELICOPTER COMMERCIAL GROUND TRAINING (3 credits). Provides advanced instruction for helicopter commercial pilot candidates to prepare for the FAA commercial pilot-helicopter written examination. Includes advanced aeronautics, avionics, human factors and aeronautical decision-making. Prerequisites: AVT 1006.

AVT 2111 AERONAUTICS 5 (3 credits). Provides academic training for a Commercial Pilot Certificate. Includes airplane performance, VFR cross-country planning, FARs applicable to commercial pilot operations, advanced aircraft systems and aircrew physiology. Requires a score of 70 percent or higher on the FAA course completion examination. Prerequisites: AVT 1112.

AVT 2201 NATIONAL AIRSPACE SYSTEM (3 credits). Studies intensively the National Airspace System including its political, geographical and operational structures. Covers ATC responsibilities, airfield operations and special-use airspace management.

AVT 2303 AVIATION CAREER PLANNING (1 credit). Surveys flying and non-flying aviation careers. Includes general aspects of various careers, professional development and certification, professional organizations and requirements for success. Prerequisites: AVT 1001.

AVT 3101 INSTRUCTIONAL TECHNIQUES (3 credits). Provides academic training for a Certified Flight Instructor Certificate. Includes the principles of learning and communication, instructional methods, techniques and media. Emphasizes oral communication skills. Requires a score of 70 percent or higher on the FAA course completion examination. Prerequisites: AVT 2002, AVT 2002.

AVT 3203 AIR TRAFFIC CONTROL 1 (3 credits). Introduces Air Traffic Control (ATC) and its use of NAV AIDS and airspace to effect positive separation and control of IFR aircraft. Prerequisites: AVT 2001 or AVT 2201.

AVT 3501 SPECIAL TOPICS IN AVIATION TECHNOLOGY (3 credits). Topics of special interest offered when student interest and staffing permit. Topics announced prior to registration. May be repeated for a maximum of six credits. (Requirement: Division director approval.)

AVT 3999 PLANNING AVIATION RESEARCH (1 credit). Allows students to plan, conduct and report on aviation research. Includes development of a three-semester plan of specific objectives, tasks, resources and time lines for planning, conducting and reporting research phases. First course in a three-semester sequence. (Requirement: Junior standing.) (Q) Prerequisites: AVT 3999.

AVT 4000 CONDUCTING AVIATION RESEARCH (1 credit). Continues AVT 3999. Includes planning, conducting and reporting aviation research. Requires students to produce a draft research report that overcomes barriers and capitalizes on opportunities in accordance with the research plan and instructor guidance. May be repeated for a maximum of two credits. Second in a three-semester sequence. (Requirement: Junior standing.) (Q) Prerequisites: AVT 3999.

AVT 4001 REPORTING AVIATION RESEARCH (1 credit). Continues research planned and started in AVT 3999 and AVT 4000. Requires completing the research analysis and conclusions, delivering a written final report and presenting an oral and graphic summary and defense. Third in a three-semester course. (Requirement: Senior standing.) (Q) Prerequisites: AVT 4000.

AVT 4002 AVIATION RESEARCH (3 credits). Requires students to plan, conduct and report on aviation research or scholarly activity. Includes a research plan, progress reports, a final research report and an oral and graphic summary and defense. May be repeated for a maximum of six credits. (Requirement: Senior standing.) (Q) Prerequisites: AVT 4000.

AVT 4201 ADVANCED AIRCRAFT SYSTEMS (3 credits). Covers theory and operating characteristics of modern transport aircraft systems, including engine, fuel, electric, hydraulic, pneumatic, flight control, environmental and computer systems and displays. (Requirement: Instructor approval or prerequisite course.) Prerequisites: AVT 2002, AVT 2002.

AVT 4202 ADVANCED AIRCRAFT OPERATIONS (3 credits). Provides an understanding of advanced aircraft performance, systems integrations and crew management. (Requirement: Instructor approval or prerequisite course.) Prerequisites: AVT 4001.

AVT 4203 AIRLINE OPERATIONS (4 credits). Covers federal U.S. air carrier regulation. Includes functions and relationships between the various major divisions of a typical air carrier. Prepares the student to take the FAA written exam for aircraft dispatcher and the FAA practical exam to receive an FAA Aircraft Dispatcher Certificate. (Requirement: Instructor approval or prerequisite course.) Prerequisites: AVT 2002, AVT 2002.

AVT 4205 TURBINE TRANSITION AND LINE OPERATIONS (3 credits). Provides classroom and simulator instruction in turboprop aircraft systems and airline-type operations in line-oriented flight training (LOFT) scenarios. Prepares students with multiengine instrument ratings for more complex aircraft systems and advanced cockpit procedures. (Requirement: Multiengine Certificate with Instrument Rating.)

AVT 4301 AVIATION SAFETY (3 credits). Explores the historical roots of modern safety organizations and the safety responsibilities and operations of the FAA and the NSB. Closely examines aviation safety planning, icing and human-centered accidents. (Requirement: Junior standing.)

AVT 5000 AIRSPACE SAFETY (3 credits). Studies intensively the National Airspace Systems (NAS), aviation safety, aviation physiology and aviation vocabulary. Prepares marginally qualified applicants for the online human factors graduate program. May not be used for credit toward the human factors degree program. (Requirement: Graduate program chair approval.)

AVT 5301 COMPLEX AVIATION SYSTEMS (3 credits). Covers conceptual and operational avionics systems in air-transport aircraft. Includes communications, navigation, flight control, flight management and engine instrumentation systems, and various electronic displays. Focuses on the pilot’s perspective for effective use of the entire suite of avionics in improved decision making and safety.

AVT 5302 AVIATION ACCIDENT INVESTIGATION (3 credits). Studies aviation accident investigation as performed by NTSB, FAA and ICAO. Includes field investigation techniques and laboratory methods for accident reconstruction, and analysis of flight mishaps using time and events correlation of cockpit voice recorders, flight data recorders and ATC radar tapes. Prerequisites: AVT 4301.

**BIOCHEMISTRY**

BCM 4991 SENIOR THESIS IN BIOCHEMISTRY 1 (3 credits). Offers biochemical research under the supervision of a faculty committee that leads to the preparation of an undergraduate thesis. Requires prior acceptance as a thesis student and approval of a thesis proposal for registration. (Q) Corequisites: COM 2012.

BCM 4992 SENIOR THESIS IN BIOCHEMISTRY 2 (5 credits). Offers biochemical research under the supervision of a faculty committee that leads to the preparation of an undergraduate thesis. Requires prior acceptance as a thesis student and approval of a thesis proposal for registration. (Q) Prerequisites: BCM 4991.

**BEHAVIOR ANALYSIS**

BEH 5000 CONCEPTS AND PRINCIPLES OF BEHAVIOR ANALYSIS (3 credits). Covers concepts, principles and processes derived from the experimental analysis of behavior, and the definition and characteristics of applied behavior analysis. Introduces behavior change procedures. (Requirement: Certificate program course not available to any graduate degree-seeking student in the School of Psychology.)

BEH 5001 BEHAVIORAL ASSESSMENT AND PROGRAM EVALUATION (5 credits). Covers behavioral assessment, measurement of behavior, data display and interpretation. Introduces the experimental evaluation of interventions. (Requirement: Certificate program course not available to any graduate degree-seeking student in the School of Psychology.) Prerequisites: BEH 5000.

BEH 5002 BEHAVIOR CHANGE PROCEDURES AND ETHICAL CONSIDERATIONS (3 credits). Covers behavioral change procedures, systems support and ethical considerations for behavior analysts. (Requirement: Certificate program course not available to any graduate degree-seeking student in the School of Psychology.) Prerequisites: BEH 5001.

BEH 5003 ADVANCED TOPICS IN APPLIED BEHAVIOR ANALYSIS (3 credits). Covers advanced topics in the content areas of behavioral analysis as needed for independent behavior analysis practitioners. (Requirement: Certificate program course not available to any graduate degree-seeking student in the School of Psychology.) Prerequisites: BEH 5002.

BEH 5004 SPECIAL TOPICS IN BEHAVIOR ANALYSIS (3 credits). Covers current topics in behavior analysis, such as the treatment of Autism Spectrum Disorder, and parent and staff training. (Requirement: Certificate program course not available to any graduate degree-seeking student in the School of Psychology.)

BEH 5100 CONCEPTS, PRINCIPLES AND CHARACTERISTICS OF BEHAVIOR ANALYSIS (3 credits). Covers basic concepts and principles derived from the experimental analysis of behavior, and their relation to applied behavior analysis, and its basic assumptions and characteristics.

BEH 5101 BEHAVIORAL AND FUNCTIONAL ASSESSMENT (3 credits). Covers descriptive assessment and functional analysis, incorporating behavioral measurement, data display and date interpretation. Also covers selection and definition of target behavior and outcomes.
BEH 5102 EXPERIMENTAL EVALUATION OF INTERVENTIONS (3 credits). Covers within-subject experimental methods, incorporating behavioral measurement, data display and data interpretation. Also covers program monitoring and evaluation, and one traditional statistics or non-subjects research methods, and ethical issues in ABA research and evaluation.

BEH 5103 BEHAVIOR CHANGE PROCEDURES AND SYSTEMS SUPPORT (3 credits). Covers behavior change procedures, generality of behavior change, transfer of technology and systems support.

BEH 5104 ETHICAL AND LEGAL CONSIDERATIONS FOR BEHAVIOR ANALYSIS (1 credit). Covers the Behavior Analyst Certification Board's guidelines for responsible conduct for behavior analysts, position papers of various professional organizations related to ethical issues in ABA, and other ethical and legal considerations for the practice of behavior analysis.

BEH 5105 RADICAL BEHAVIORISM (3 credits). Covers B.F. Skinner's seminal articles on radical behaviorism, along with other notable commentaries and Skinner's response. Includes determinism, private events, verbal behavior, contingency-shaped vs rule-governed behavior, and a radical behaviorist perspective on culture and society.

BEH 5200 ELEMENTS OF EFFECTIVE ABA PRACTICE (3 credits). Provides basic skills and techniques that are the cornerstone of professional behavior analytic practice. Covers interviewing strategies, integration of behavioral assessment data with treatment planning, current evidence-based best practices, and working and communicating with other professionals and interdisciplinary teams.

BEH 5201 ETHICAL AND PROFESSIONAL STANDARDS IN ABA (1 credit). Includes defining acceptable treatment environments, rights to effective treatment, and recognizing the rights to habilitation and personal liberties, least restrictive alternatives, punishment and aversive control, emergency interventions and other ethical issues related to persons with disabilities and clinical populations.

BEH 5250 INTENSIVE PRACTICAL TRAINING IN ABA (4 credits). Provides biweekly face-to-face coaching and supervision within the context of a clinical or educational applied setting. Includes behavioral assessment, program design, implementation and evaluation; oversight of program implementation by others; and related activities. Supervision includes direct observation of student performance. (Requirement: To be taken three terms for a total of 12 credits; full-load course.)

BEH 5290 CAPSTONE PROJECT IN APPLIED BEHAVIOR ANALYSIS (3 credits). Includes conducting an applied project, the quality of which is judged acceptable by a faculty supervisor. Considered a full-load course.

BEH 5301 APPLICATIONS OF BEHAVIOR ANALYSIS TO EDUCATION AND TRAINING (3 credits). Covers the design, implementation and evaluation of efficient learning programs to provide necessary skills and desired outcomes for clients and instructors. Teaches the instructional design process from a behavior analytic perspective. (Requirement: Enrollment in behavior analysis degree program or successful completion of BEH 5000 or BEH 5100.)

BEH 5400 INTRODUCTION TO ORGANIZATIONAL BEHAVIOR MANAGEMENT (3 credits). Includes performance and cause analysis, and intervention selection, design and implementation. Also includes evaluation of past and current research on improving workplace productivity, quality, efficiency, cost-effectiveness and safety. Addresses how performance management uses behavior principles as applied in business and industry.

BEH 5401 ADVANCED ORGANIZATIONAL BEHAVIOR MANAGEMENT (3 credits). Examines human behavior in organizations from a behavior analytic perspective. Includes the interface between OBM and I/O psychology, pay for performance, motivation, performance improvement techniques, compensation, quality, job satisfaction and its relation to productivity, and the ethics of personnel management.

BEH 5450 INTENSIVE PRACTICAL TRAINING IN OBM (4 credits). Provides training, supervision and evaluation of OBM competencies within the context of an organization. Includes performance assessments, pinpointing, developing systems of measurement, implementing a performance improvement plan, plan monitoring and conducting a cost/benefit analysis. Supervision includes direct observation of student performance. Considered a full-load course.

BEH 5490 CAPSTONE PROJECT IN ORGANIZATIONAL BEHAVIOR MANAGEMENT (3 credits). Includes conducting an applied project, the quality of which is judged acceptable by a faculty supervisor. Considered a full-load course.

BEH 5500 SEMINAR IN CONCEPTUAL ISSUES IN BEHAVIOR ANALYSIS (1 credit). Covers conceptual issues in behavior analysis and radical behaviorism. Includes a Skinnerian analysis of verbal behavior, free will, determinism, coercion and aversion control. Requires reading, class discussion, and writing and presenting papers. May be repeated for a total of four credits, provided topics change.

BEH 5501 SEMINAR IN METHODOLOGICAL ISSUES IN APPLIED BEHAVIOR ANALYSIS (1 credit). Covers methodological issues in behavior analysis. Includes low-tech and high-tech research-based methods, computerized data collection systems and graphing data. Requires reading, class discussion, and writing and presenting papers. May be repeated for a total of four credits, provided topics change.

BEH 5502 SEMINAR IN THE EXPERIMENTAL ANALYSIS OF BEHAVIOR (1 credit). Covers basic EAB research and seminal articles in the field. Includes basic operant processes, the matching law, higher-order response classes, stimulus equivalence, stimulus-induced behavior, and behavioral contrast and momentum. May be repeated for a total of four credits, provided topics change.

BEH 5503 SEMINAR IN EDUCATIONAL BEHAVIOR ANALYSIS (1 credit). Covers current topics in educational applications in ABA. Includes programmed instruction and PSL, precision teaching and direct instruction, evidence-based practice, training teachers to manage classroom behavior and teaching children with autism and related disabilities. May be repeated for a total of four credits, provided the topics change.

BEH 5504 SEMINAR IN CLINICAL BEHAVIOR ANALYSIS (1 credit). Covers current topics in OBM applications. Stresses methods of improving performance using functional assessment, performance feedback and reinforcement. Discusses pay-for-performance structures, systems analysis and behavior-based safety specialty areas. May be repeated for a total of four credits, provided topics change.

BEH 5505 SEMINAR IN ORGANIZATIONAL BEHAVIOR MANAGEMENT (1 credit). Covers current topics in OBM applications. Stresses methods of improving performance using functional assessment, performance feedback and reinforcement. Discusses pay-for-performance structures, systems analysis and behavior-based safety specialty areas. May be repeated for a total of four credits, provided topics change.

BEH 5506 BASIC TO APPLIED CONTINUUM IN BEHAVIOR ANALYSIS (1 credit). Covers the relationship between current topics in the experimental analysis of behavior and applications. Includes applications of the matching law, time-based schedules and stimulus equivalence. Requires reading, class discussion, and writing and presenting papers. May be repeated for a total of four credits, provided topics change.

BEH 5507 BEHAVIOR ANALYSIS IN AUTISM AND OTHER DEVELOPMENTAL DISABILITIES (2 credits). Covers behavioral assessment and treatment techniques used with individuals with autism and related developmental disabilities. May include assessment and treatment of self-injurious behavior and teaching functional communication.

BEH 5508 ADVANCED ABA TREATMENT PLANNING (3 credits). Covers recognizing and responding to factors affecting the application of behavior analysis principles in community settings. Includes designing intervention plans to fit characteristics of social and physical context such as families and family homes; schools, service agencies and facilities; and places of employment, recreation and commerce.

BEH 5510 DIRECTED READINGS IN BEHAVIOR ANALYSIS (2-4 credits). Selected readings and/or Web-based interactive exercises in a specific topic under the direction of a faculty member. May be repeated for a total of four credits. (Requirement: Instructor approval.)

BEH 5609 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

BEH 5900 THESIS PREPARATION (1 credit). Includes guided review of research literature and/or pilot work relevant to the thesis topic.

BEH 5999 THESIS (1-6 credits). Includes preparation and submission of a research thesis, the quality of which is judged acceptable by the ABA program chair, the college and graduate programs director. Considered a full-load if registered for at least three credits.

BEH 6301 APPLICATIONS OF BEHAVIOR ANALYSIS TO COLLEGE INSTRUCTION (3 credits). Covers fundamentals of instructional design and college instruction (derived from the experimental analysis of behavior and on-behavior analytic research in education applications of these principles). Includes programmed instruction, PSL, precision teaching, direct instruction and other evidence-based practices, and e-learning environments. (Requirement: Enrollment in behavior analysis degree program or successful completion of BEH 5000 or BEH 5100.)

BEH 6800 SUPERVISED RESEARCH (1-6 credits). Research conducted under the guidance of doctoral-level graduate faculty. Research may lead to preparation of a research proposal for dissertation work.

BEH 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirement: Accepted candidacy and approval by Office of Graduate Programs.)

BEH 6999 DISSERTATION IN BEHAVIOR ANALYSIS (3-12 credits). Research and preparation for the doctoral dissertation. (Requirement: Admission to candidacy for the doctoral degree.)
BIOLOGICAL SCIENCES

BIO 1010 BIOLOGICAL DISCOVERY 1 (4 credits). The first of a two-semester sequence on the scientific approach to biology. Emphasizes the scientific method, analytical techniques, use of original source materials, ethical questions in biology, historical perspectives of the development of biological theory and profiles of prominent figures in biology. (Requirement: High school biology and chemistry.)

BIO 1020 BIOLOGICAL DISCOVERY 2 (4 credits). The second of a two-semester sequence on the scientific approach to biology. Continues an integrated approach to the study of the hierarchical structure and function of living systems, including the origin and history of life on Earth. (Requirement: High school biology and chemistry.)

BIO 1200 INTRODUCTION TO THE HEALTH Professions (1 credit). Introduces careers in the health profession, including diverse medical fields and allied health professions. Discusses strategies for preparing for professional schools, getting volunteer experience, taking professional admission exams and applying to a professional school.

BIO 1500 INTRODUCTION TO AQUACULTURE (1 credit). Introduces the basic concepts of aquaculture including examination of algal, invertebrate and fish systems. Includes several field trips to local aquaculture operations.

BIO 2010 MICROBIOLOGY (4 credits). Covers the fundamentals of microbiology. Examines the structure, classification, metabolism and pathogenicity of prokaryotes, eukaryotic microorganisms and viruses. Labs cover aspects of isolation, culture, enumeration, identification and control of microorganisms. Prerequisites: BIO 1020, CHM 1102.

BIO 2110 GENERAL GENETICS (4 credits). The fundamentals of genetics from Mendel to modern day. Emphasizes the transmission of genetic material, the molecular nature of heredity and the heredity of populations. In the lab, students perform genetic analysis with Drosophila (fruit flies), as well as a variety of microbial systems. Prerequisites: BIO 1010.

BIO 2332 PRIMER FOR BIOMATH (1 credit). Introduces the separate languages of mathematics and biology such that students from the different disciplines can efficiently develop a biomath glossary to communicate with one another. Focuses on the current research projects in biology and ecology, and the relevant mathematical analysis. (Requirement: Instructor approval.) Prerequisites: MTH 1000.

BIO 2801 BIOMETRY (4 credits). Experimental design and hypothesis testing in the biological sciences, and the analysis of biological data using descriptive statistics and applying parametric and non-parametric tests. Computer applications include statistical packages, spreadsheets, graphics preparation and word processing in the development of reports on modules of field, clinic- and lab-based studies. (CL) Prerequisites: BIO 1020.

BIO 2935 FIELD BIOLOGY AND ECOLOGY/SMOKY MOUNTAINS (3 credits). Field biology and ecology methodology are discussed, demonstrated and applied in the field to collect data for analysis. Field studies are conducted in the Smoky Mountains. Prerequisites: BIO 1020.

BIO 2955 FIELD BIOLOGY AND ECOLOGY/CORAL REEFS (3 credits). Field biology and ecology methodology are discussed, demonstrated and applied in the field to collect data for analysis. Field studies are conducted in the Bahamas. Prerequisites: BIO 1020.

BIO 3210 MAMMALIAN PHYSIOLOGY (4 credits). Introduces the study of bodily functions. Emphasizes biophysical principles and control systems to explain organ system function and the maintenance of homeostasis. (Q) Prerequisites: BIO 1020, CHM 2001.

BIO 3220 DEVELOPMENTAL BIOLOGY (4 credits). Overviews developmental processes including contemporary themes of molecular, cellular and multicellular aspects of embryonic and postnatal development. Discusses the issues of induction, regulation, differentiation and senescence. Prerequisites: BIO 2110.

BIO 3410 GENERAL ECOLOGY (4 credits). Studies the distribution and abundance of organisms, with emphasis at the level of biological populations. Interaction of populations with the abiotic environment, energetics, population growth, reproduction, competition, predation, adaptation and evolution. Modular lab exercises stress the experimental design and conduct, and data analysis. Prerequisites: BIO 2801.

BIO 3510 INVERTEBRATE ZOOLOGY (4 credits). Lectures and labs on the origins and adaptive radiation of the kingdom Metazoa, including comparative structure and function of living and extinct animal phyla, evolution of organ system, and comparative physiology and ecology. Prerequisites: BIO 2801.

BIO 3625 MOLLUSCAN AQUACULTURE (3 credits). Studies the basic biology, life history and culture techniques of the major commercially important molluscs. Covers culture procedures for mytilids, clams and oysters. Includes labs culturing selected mytilid species, and spawning and larviculture of selected bivalve species. Prerequisites: BIO 3510.

BIO 3701 EVOLUTION (3 credits). Describes the processes resulting in evolutionary change and the factors affecting those processes. Discusses evolution at all levels, from cell and molecular evolution to local populations to major groups, and covers time frames drawing on knowledge of many biological fields. Prerequisites: BIO 1020, BIO 2110.

BIO 3935 ECOLOGY OF TROPICAL ECOSYSTEMS (3 credits). A three-week field examination of the aspects of population and community ecology of tropical rainforest systems in Belize or Costa Rica, Central America. Familiarizes the student with ecological principles governing the abundance and distribution of species in different rainforest ecosystems. Prerequisites: BIO 1020.

BIO 3940 TROPICAL MARINE ECOLOGY (3 credits). Includes intensive fieldwork focusing on tropical marine ecosystems and their biological communities. Emphasizes biodiversity, the ecology of dominant taxa, interactions between physical and biological processes, and the structure and function of representative communities. Prerequisites: BIO 1020.

BIO 4010 BIOCHEMISTRY 1 (4 credits). Introduces the structure and properties of proteins, carbohydrates, lipids and nucleic acids. Includes lectures and labs involving intermediary metabolism, properties of enzymes, bioenergetics including oxidative phosphorylation and photosynthesis. Prerequisites: CHM 2002.

BIO 4015 METHODS IN PROTEIN ANALYSIS (3 credits). Focuses on basic theories and techniques used for protein isolation and characterization. Covers chromatography, electrophoresis, spectrophotometry, ultracentrifugation, mass spectrometry, concentration analysis and protein over-expression in Eukaryotic and Prokaryotic systems. Includes purifying and characterizing proteins. Prerequisites: BIO 4010.

BIO 4030 CONSERVATION BIOLOGY (3 credits). Provides an overview of biodiversity patterns and their susceptibility to human activity. Investigates the science underlying conservation of plant and animal communities (terrestrial and marine) and ecosystems. Pays special attention to the need to develop conservation strategies that accommodate climate change. Prerequisites: BIO 4410.

BIO 4101 MOLECULAR BIOLOGY (3 credits). Presents the structure, function and regulation of genetic information. Includes in-depth discussion of nucleic acid replication, transcription and translation. Introduces uses and applications of nucleic acids in current research. Prerequisites: BIO 4010.

BIO 4110 BIOCHEMISTRY 2 (4 credits). Lectures and labs involving the metabolism of carbohydrates, lipids and nitrogenous compounds including amino acids, proteins and nucleic acids. Discusses in detail the regulation of metabolism, biosynthesis of macromolecules and control of gene expression. Prerequisites: BIO 4010.

BIO 4120 GENETIC ENGINEERING TECHNIQUES (4 credits). Lectures and labs on the theory and practice of gene splicing and manipulation, the use of restriction enzymes, plasmid and phage vectors and the cloning of genes. Also includes nick translation, random primer labeling, colony hybridization and southern blotting. (Q) Prerequisites: BIO 4011, BIO 4110.

BIO 4130 NUCLEIC ACID ANALYSIS (4 credits). Lectures and laboratories involving the theory and practice of current methods of nucleic acid manipulation. Techniques studied include restriction site mapping, end-labelling, sequencing, mRNA isolation, cDNA synthesis, DNA:DNA and DNA:RNA hybridization, PCR technology and DNA fingerprinting. (Q) Prerequisites: BIO 4120.

BIO 4150 SPECIAL TOPICS IN MOLECULAR BIOLOGY (3 credits). Covers current and important topics in cell and molecular biology. May include mechanisms of DNA mutagenesis, DNA damage, prokaryotic and eukaryotic DNA repair schemes, eukaryotic DNA organization and function, eukaryotic DNA replication mechanisms and genome instability associate with human disease. Prerequisites: BIO 4010.

BIO 4201 IMMUNOLOGY (3 credits). Covers basic immunology and the fundamental principles relating to clinical immunology. Studies the two functional divisions of the immune system, the innate and the adaptive immune systems, along with the cells and the soluble factors responsible for the immune response. Prerequisites: BIO 4010.

BIO 4210 PLANT PHYSIOLOGY (4 credits). Presents the physiological processes of plants and their interactions with their environment. Covers water relations, plant biochemistry, plant development and environmental physiology. Prerequisites: BIO 1020, CHM 2002.

BIO 4301 CELL BIOLOGY (3 credits). Emphasizes the interdependence of three systems: a membrane- cytoskeletal system, a system that directs genetic information into synthesis of cell constituents and a system integrated into membranes that converts energy, supplied to cells as nutrients or light, into cell function and cell synthesis. Prerequisites: BIO 1010, CHM 2001.

BIO 4410 COMMUNITY ECOLOGY (4 credits). Studies the composition and distribution of biological communities and the community responses to climatic and other abiotic factors. Ecosystems, biogeography, biodiversity, successions, paleoecology, pollution, conservation. Modular lab exercises stress the experimental design, conduct and data analysis of community studies. (Q) Prerequisites: BIO 2801, BIO 3410.

Course Descriptions
BIO 4411 CONSERVATION GENETICS (4 credits). Introduces conservation genetics. Focuses on population genetic theory and emphasizes molecular methods for examining population differentiation, genetic diversity, the evolution of small populations, and the management of threatened populations. Lab includes experimental design, data collection and analysis. Prerequisites: BIO 2110.

BIO 4420 PRE-COLUMBIAN ECOSYSTEMS (1 credit). Investigates through ecology the extent to which pre-Columbian occupants of the Americas influenced ecosystems. Includes archaeological, anthropological and ecological data that contributes to understanding the key debates about what is natural in the Americas. (Requirement: Junior standing.) Prerequisites: BIO 3410.

BIO 4421 NEOTROPICAL ARCHEOECOLOGY (5 credits). Studies the impact of human activities on past and present ecology. Integrates regional archeology with modern ecology to compare sites with and without past human impacts. Uses field techniques to include forest census in two ecosystems, sediment coring and curation of specimens. Prerequisites: BIO 4420.

BIO 4515 ECOLOGY OF CORAL REEFS (3 credits). Broadly examines coral reefs from reef geology and geomorphology to conservation and management, including the physical environment, coral and symbiosis, reproduction, demography, community dynamics, diversity and function, biogeography and evolution, and natural and anthropogenic disturbances. Prerequisites: BIO 3410, BIO 4410.

BIO 4517 INTRODUCTION TO MODELING FOR ECOLOGY AND BIOLOGY (4 credits). Includes allometric principles, biological processes within organisms, population and metapopulation models, competition and symbiosis, predator-prey relations, community and diversity, and models in evolution, biogeography, ecosystems and conservation. Prerequisites: BIO 3410.

BIO 4530 BIOLOGY OF FISHES (4 credits). Introduces the structure, evolution, behavior and ecology of freshwater and marine fishes. Labs examine the anatomy, physiology and ecology of fishes. Includes field collection trips to local marine and freshwater habitats. Prerequisites: BIO 3410.

BIO 4550 COMPARATIVE VERTEBRATE ANATOMY (4 credits). Lectures and labs examine the comparative anatomy of higher animals. Emphasizes the evolutionary trends of the vertebrates. (Requirement: Junior standing.)

BIO 4620 FISH AQUACULTURE AND MANAGEMENT (4 credits). Surveys in depth the culture methods of freshwater and saltwater fish species including an introduction to the theory and techniques necessary for managing wild fisheries stocks. Labs focus on fish culturing methodology and analysis of wild fish populations. Includes several field studies. Prerequisites: BIO 1020.

BIO 4625 CRUSTACEAN AQUACULTURE (3 credits). Studies the basic biology, life history and culturing techniques of the major commercially important crustaceans. Labs culture selected decapod species. Prerequisites: BIO 3510.

BIO 4641 BIOLOGY OF MARINE MAMMALS (3 credits). Studies the evolution, classification, ecology and general life history of marine mammals. Prerequisites: BIO 1020.

BIO 4710 MARINE BIOLOGY (4 credits). Lectures and labs on the nature of life in the ocean and in coastal environments. Reviews taxonomic diversity, ecological roles and adaptations of the five kingdoms. Includes physiological mechanisms, locomotion and migrations, defenses against predation, sensory reception, productivity, feeding, reproduction and symbiosis. Prerequisites: BIO 3510.

BIO 4720 MARINE ECOLOGY (4 credits). Covers the structure and function of marine biotic systems from the organism (life histories) to community and ecosystem. (Requirement: Senior standing.) (Q) Prerequisites: BIO 2801, BIO 3410.

BIO 4904 FIELD BIOLOGY AND EVOLUTION OF THE GALAPAGOS ISLANDS (3 credits). Field biology course in the Galapagos Islands. Emphasizes climate and evolution processes and patterns. Includes both terrestrial and marine investigations of the unique biota of the islands. A field fee is required. Prerequisites: BIO 3410.

BIO 4990 BIOLOGY FORUM (1 credit). Critical analysis of primary literature and review articles in the biological sciences by oral presentation and small group discussion. (Requirement: Instructor approval.)

BIO 4991 UNDERGRADUATE RESEARCH 1 (3 credits). Research experience under the direction and supervision of a member of the biological sciences faculty. (Requirement: Instructor approval.) (Q)

BIO 4992 UNDERGRADUATE RESEARCH 2 (3 credits). Research experience under the direction and supervision of a member of the biological sciences faculty. (Requirement: Instructor approval.) (Q)

BIO 4993 UNDERGRADUATE RESEARCH 3 (3 credits). Research experience under the direction and supervision of a member of the biological sciences faculty. (Requirement: Instructor approval.) (Q)

BIO 5005 COMPARATIVE BIOLOGY OF INVERTEBRATES (3 credits). Introduces graduate students to the methods by which invertebrate metazoa perform life functions, as well as the similarity underlying these methods. Focuses on how the physiology of fishes is affected and regulated in response to environmental changes. Fishes inhabit a vast range of habitats that vary with respect to biotic and abiotic factors. Successful maintenance of populations in challenging environments requires responsive adjustments in physiology. (Q)

BIO 5022 CORAL REEF ECOLOGY (3 credits). Two-week field experience in the Bahamas. Familiarizes students with patterns of abundance and distribution of the common species of coral reef fishes. Emphasizes species identification and field methods of investigating reef fish ecology. A field fee is required.

BIO 5025 ECOLOGY OF SALT MARSH AND MANGROVE (3 credits). Discusses the ecology of salt marsh and mangrove systems. Emphasizes how organisms adapt to the alternating inundation and exposed environment, and how physical and biological factors interact to determine the population and community structures.

BIO 5031 CONSERVATION GENETICS (3 credits). Introduces conservation genetics. Focuses on population genetic theory and emphasizes molecular methods to identify evolutionarily significant units, assess genetic diversity, understand the evolutionary processes and management threatened populations.

BIO 5034 PALEOCLIMATOLOGY AND PALEOECOLOGY (3 credits). Discusses how and why climate has changed, and how those changes have influenced ecosystems. Also covers species migration, speciation, community change and biogeography. Provides tools to develop climatic and ecological histories.

BIO 5045 REPRODUCTION AND RECRUITMENT OF MARINE FISHES (4 credits). Discusses the processes of reproduction and recruitment of marine fishery species. Topics range from the physiological and behavioral characteristics of reproduction, to the molecular events of fertilization, to the influences of oceanographic processes on larval and juvenile life stages.

BIO 5047 ECOLOGICAL PHYSIOLOGY OF FISHES (3 credits). Addresses how the physiology of fishes is affected and regulated in response to environmental changes. Fishes inhabit a vast range of habitats that vary with respect to biotic and abiotic factors. Successful maintenance of populations in challenging environments requires responsive adjustments in physiology.

BIO 5060 BIOLOGY AND ECOLOGY OF SEAGRASSES (3 credits). Lectures, discussions of recent literature, and independent or group laboratory study of the general biology and ecology of seagrasses, along with autecology and community ecology of tropical and temperate seagrass meadows.

BIO 5065 NATURAL HISTORY OF THE INDIAN RIVER LAGOON (3 credits). Field examination of the flora, fauna and descriptive ecology of the Indian River system along the east coast of Florida. Emphasizes understanding natural history in relation to geologic history, biogeography, human society and recent problems in resource management.

BIO 5075 MULTIVARIATE ANALYSIS IN BIOLOGY (3 credits). Teaches graduate students how to apply various multivariate techniques in analyzing biological data using a hands-on problem-solving approach. Includes principal component analysis, cluster analysis and discriminate function analysis.

BIO 5080 MECHANISMS OF BIOLOGICAL CLOCKS (3 credits). Surveys the primary literature of processes underlying rhythmicity including neural, cellular and molecular mechanisms. Focuses on circadian rhythms in vertebrate and invertebrate animals.
BIO 5085 BIOLOGICAL IMAGING (3 credits). Introduces the application of image processing techniques to biological problems. Includes the acquisition, enhancement and quantification of 2-D images, motion analysis, and processing in 3-D.

BIO 5120 ECOLOGY OF TROPICAL COMMUNITIES (3 credits). Lecture and field examination of aspects of the population and community ecology of tropical marine systems, especially coral reefs and mangroves. Emphasizes factors influencing community structure and the relationships between representative populations.

BIO 5140 CORAL ECOLOGY (3 credits). Focuses on both theoretical and practical aspects of coral ecology, including hands-on taxonomy and assessment of the functional response of coral reefs to environmental factors and thermal stress at a global scale. Emphasizes identification of processes and regulatory phenomena driving the dynamics of coral communities.

BIO 5150 LANDSCAPE ECOLOGY (3 credits). Applies landscape ecology techniques (spatial sampling, patch dynamics, scale detection, landscape metrics, geographical information systems, time series, disturbance and pollution, organism response to landscape patterns) to landscape patterns, connectivity and metapopulations dynamics, reserve design and ecosystem processes. Prerequisites: BIO 3410.

BIO 5210 APPLIED PHYSIOLOGY (3 credits). Explores the mechanisms by which the physiological systems of the human body work. Applies these principles to the important issues in biomedical engineering. Covers neuronal communication, cardiovascular function in health and disease, respiratory function, kidney and water/salt balance, bone growth and metabolism, and reproductive endocrinology. (Requirement: Graduate standing or instructor approval.)

BIO 5420 PRE-COLUMBIAN ECOSYSTEMS (0 credits). Investigates through ecology the extent to which pre-Columbian occupants of the Americas influenced ecosystems. Includes archaeological, anthropological and ecological data that contributes to understanding the key debates about what is natural in the Americas. (Requirement: Graduate standing.)

BIO 5421 NEOTROPICAL ARCHEOECOLOGY (3 credits). Studies the impact of human activities on past and present ecology. Integrates regional archaeology with modern ecology to compare sites with and without past human impacts. Uses field techniques that include forest census in megadiverse environments, sediment coring and curation of specimens. Prerequisites: BIO 5420.

BIO 5501 CELL AND MOLECULAR BIOLOGY (3 credits). OVERVIEWS molecular mechanisms used to regulate fundamental cellular processes. Emphasizes gene expression, cell growth, replication and differentiation, and on intercellular communications.

BIO 5502 MOLECULAR BIOLOGY OF SIGNAL TRANSDUCTION (3 credits). Introduces current concepts of cellular signal transduction. Includes hands-on experience in essential techniques including production of fusion proteins and quantitative microinjection.

BIO 5510 CURRENT TOPICS IN ECOLOGY (3 credits). Readings and discussions of recent advances and new concepts in ecological research.

BIO 5515 PHARMACOLOGY AND DRUG DESIGN (3 credits). OVERVIEWS basic principles of pharmacology, emphasizing preclinical studies used in the development of new drugs. Includes structure-function relationships, dose-response curves, target-based drug assays, rational drug design and in vitro cytotoxicity assays.

BIO 5517 MODELING FOR ECOLOGY AND BIOLOGY (3 credits). Presents graduate-level modeling and applications for ecology and biology. Includes allometry, growth and healing of wounds, population dynamics, competition and symbiosis, predator-prey relations, community and diversity models, models in biogeography, evolution and conservation. Prerequisites: BIO 3410.

BIO 5522 BIOINFORMATICS, GENOMICS AND PROTEOMICS (3 credits). Introduces the new sciences of genomics and proteomics. Emphasizes the software tools used to search, analyze and understand DNA, RNA and proteins (bioinformatics). Intended for students planning a career in medicine, biological research, biotechnology or pharmaceuticals. (Requirement: Graduate standing or instructor approval.)

BIO 5537 APPLIED BIOTECHNOLOGY (6 credits). Focuses on the collection, isolation, characterization and screening of natural products, especially from marine organisms through fieldwork and labs. Includes taxonomy, microbial isolation, collection, extraction preparation, bioassy and chemical structure determination.

BIO 5539 MICROBIAL BIOTECHNOLOGY (3 credits). OVERVIEWS microbes as producers of economically important proteins and other organic compounds. Includes expression of proteins from cloned genes, antibiotics, fermentation, bacterial degradation, environmental applications and culture methodology.

BIO 5540 GROWTH AND DIVISION OF CELLS 1: PROKARYOTES (3 credits). Covers the molecular biology of microbial reproduction, emphasizing chromosome and plasmid DNA replication, the cell division cycle, regulators of gene expression and the mechanisms of cell division in bacteria.

BIO 5570 DNA STRUCTURE AND FUNCTION (3 credits). Advanced focus on DNA biology emphasizing current research topics covering DNA structure-function relationships, particularly the dynamic nature of DNA and the interaction of DNA and proteins to regulate gene expression. Examines prokaryotic, eukaryotic and viral systems.

BIO 5571 DNA INTERACTIONS (2 credits). Considers recent literature sources on how DNA interacts with a variety of agents, energetic radiations, small-molecule chemical mutagens and carcinogens, and large regulatory and repair protein molecules. Students assimilate seminar skills required for professional scientific presentations.

BIO 5572 DNA: CRITICAL LITERATURE ANALYSIS (3 credits). Gives in-depth consideration to recent literature related to DNA structure and function. Teaches critical reading, evaluation, reviewing and presentation of scientific papers. Includes skills needed for reading and reviewing scientific manuscripts. BIO 5570 recommended as prerequisite. Understanding of DNA structure and biology advised.

BIO 5573 SCIENTIFIC ANALYSIS, WRITING AND PRESENTATION (3 credits). Gives in-depth consideration to recent literature related to various biology areas. Teaches how to critically read, evaluate, review and present biological science papers. Also teaches skills for writing biological abstracts, papers and grants, and for making professional biology presentations.

BIO 5575 BIOLOGY OF CANCER (3 credits). Comprehensive overview of the biology and molecular biology of neoplastic disease. Emphasizes recent research with oncogenes and oncogenic viruses. Presents lectures on causes, spread and treatment of cancer.

BIO 5576 MOLECULAR GENETICS (3 credits). Covers the essential topics in molecular genetics, beginning with the classic experiments involving bacteria and bacteriophage, progressing to the current focus on mapping human disease. Emphasizes reading and discussing primary research literature with particular attention on the experimental approaches used.

BIO 5585 PROTEIN STRUCTURE AND FUNCTION (3 credits). Introduces the essential biochemical and biophysical techniques used for protein expression, purification and characterization. Covers current research topics in protein metabolism and human diseases. Also covers protein-based drug and biosensor development in nanomedicine.

BIO 5630 SENSORY BIOLOGY (3 credits). Introduces vertebrate sensory systems, emphasizing the mechanisms of sensory processing and perception of events of varying complexity. Includes student review and discussion of current literature and several experiments.

BIO 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfactory of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

BIO 5904 FIELD BIOLOGY AND EVOLUTION OF THE GALAPAGOS ISLANDS (3 credits). Field biology course in the Galapagos Islands. Emphasizes climate and evolution processes and patterns. Includes both terrestrial and marine investigations of the unique biota of the islands. A field fee is required. Prerequisites: BIO 3410.

BIO 5990 BIOLOGICAL SCIENCES SEMINAR (0 credits). Presents and discusses current research by visiting scientists, university faculty and graduate students.

BIO 5991 BIOLOGICAL RESEARCH SEMINAR (1 credit). Presents and discusses thesis or dissertation research.

BIO 5995 BIOLOGICAL RESEARCH (3-9 credits). Research under the guidance of a faculty member of the biological sciences in a selected area of biology.

BIO 5997 INDUSTRIAL INTERNSHIP (3-6 credits). Involves at least 400 hours of supervised research activities in an approved industrial summer internship program. (Requirement: Acceptance into an industrial summer internship program approved through the program coordinator.)

BIO 5998 BIOLOGICAL RESEARCH ROTATION (3 credits). Familiarizes the student with research carried out in various labs. Covers special problems, techniques and experimental designs. The student completes two rotations of approximately seven to eight weeks in different labs.

BIO 5999 THESIS (3-6 credits). Research and preparation for the master's thesis.

BIO 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfactory of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

BIO 6999 DISSERTATION (3-12 credits). Research and preparation for the doctoral dissertation. (Requirement: Admission to candidacy for the doctoral degree.)
BIOMEDICAL ENGINEERING

BME 5103 TRANSPORT PROCESSES IN BIOENGINEERING (3 credits). Studies mass, momentum and heat transfer within the human body, between the human body and the environment and in the design of devices and systems involved with transport processes in medical and clinical settings. (Requirement: Instructor approval.)

BME 5210 CONDUCTION HEAT TRANSFER (3 credits). Covers conservation of energy in a deformable continuous medium; solution of time-dependent homo-geneous heat conduction problems using separation variables, Duhamel's method, Green's function, analytical approximate methods, and finite-difference methods; phase-change problems; inverse problem; bio-heat transfer modeling and solution methods. Prerequisites: MAE 4171.

BME 5259 MEDICAL IMAGING (3 credits). Presents the interdisciplinary principles of medical imaging techniques such as diagnostic ultrasound, radiography, x-ray computer tomography (CT) and magnetic resonance imaging (MRI). Includes the physical principles, noise modeling and signal processing for each imaging modality. Prerequisites: MTH 2201. MTH 2401.

BME 5569 BIOMATERIALS AND TISSUE REGENERATION (3 credits). Introduces the principles of materials science and cell biology underlying the design of medical implants, artificial organs and matrices for tissue engineering. (Requirement: Prerequisite course or graduate standing or instructor approval.) Prerequisites: BIO 4010 or CHE 3260.

BME 5702 BIOMEDICAL APPLICATIONS IN PHYSIOLOGY (3 credits). Introduces current health issues in human physiological systems. Includes the practical application of current biomedical engineering technologies (pacing systems, defibrillators, ventilators, prosthetic joints, heart valves and others) to monitor, repair, replace or augment those systems. Prerequisites: BME 5210.

BME 5710 ORTHOPEDIC BIOMECHANICS (3 credits). Introduces the mechanical and structural aspects of the human skeletal system. Includes the analysis and design of orthopedic implants such as hip and knee replacements. Prerequisites: MAE 3083.

BME 5720 BIOMEDICAL INSTRUMENTATION (3 credits). Includes concepts and techniques of instrumentation in bioengineering. Emphasizes the effects of instrumentation on the biological system under investigation, transducers and couplers, data conversion, conditioning and transmission, and experimental problems in acute and chronic procedures with static and dynamic subjects. Prerequisites: BME 5210.

BME 5730 BIOPHOTONICS AND MICROSCOPY (3 credits). Introduces optical phenomena and the optical properties of biological tissue, basic elements of optics and optical sources. Emphasizes lasers in the context of biomedical applications. Also includes engineering principles of various microscopy modalities. Prerequisites: MTH 2201.

BME 5740 CELLULAR BIOMECHANICS (3 credits). Provides the basic knowledge of cell biology and the basic knowledge of engineering mechanics. Introduces the necessity to study cell mechanics, the various aspects of the study of cell mechanics, and the major results obtained to date in these aspects.

BUSINESS

BUS 1301 BASIC ECONOMICS (3 credits). Introduces basic macro- and microeconomic concepts. Includes the economic role of government, business and individuals. Seeks to acquaint the student with sufficient material to understand major concepts and terminology used in our economy and the global community. Noncredit for College of Business majors. (SS)

BUS 1601 COMPUTER APPLICATIONS FOR BUSINESS (3 credits). Introduces the use of PC applications across the major functional areas of business. Includes word processing, spreadsheets, database management, presentation software, and use of the Internet and World Wide Web. (CL)

BUS 1801 GLOBAL BUSINESS PERSPECTIVES (3 credits). Surveys the functions and operations of business organizations in a global marketplace. Studies the structure, operation, financing, relationships and responsibilities of firms in context of current legal, social, regulatory and environmental issues. Requires critical thinking, communication, research, and individual and group problem solving.

BUS 2211 INTRODUCTION TO FINANCIAL ACCOUNTING (3 credits). Introduces the financial accounting environment, financial statements, the accounting cycle, and the theoretical framework of accounting measurement, emphasizing mechanics, measurement theory and the economic environment.

BUS 2212 INTRODUCTION TO MANAGERIAL ACCOUNTING (3 credits). Continues BUS 2211, emphasizing concepts and issues associated with the accounting and management of businesses, with particular emphasis on understanding the role of accounting in product costing, costing for quality, cost-justifying investment decisions, and performance evaluation and control of human behavior. Prerequisites: BUS 2211.

BUS 2303 MACROECONOMICS (3 credits). Introduces the concepts that aid in understanding both aggregate economic conditions and the policy alternatives designed to stabilize national economies. Includes the determination of GDP and national income, inflation, unemployment, monetary policy, economic growth and exchange rates. (SS)

BUS 2304 MICROECONOMICS (3 credits). Introduces the neoclassical theory of price determination. Includes supply and demand analysis, production and cost theory, market structures, externalities and public goods, factor payments, income distribution and informational asymmetries. (SS) Prerequisites: MTH 1000 or MTH 1001 or MTH 1701 or MTH 1702.

BUS 2511 SYSTEMS ANALYSIS AND DESIGN (3 credits). Introduces and applies concepts, methods and tools for systems development life-cycle (SDLC) phases, planning, analysis, design, implementation and maintenance during the development and operation in an information system. Emphasizes critical thinking and problem-solving as an applied approach to developing information systems. Prerequisites: BUS 5304.

BUS 2601 LEGAL AND SOCIAL ENVIRONMENTS OF BUSINESS (3 credits). Investigates the operational responsibilities of business in light of political, moral, social, ethical and jurisprudential considerations.

BUS 2703 STATISTICS FOR BUSINESS (3 credits). Introduces methods of collection, analysis, and interpretation of data. Includes data presentation; measures of central tendency and dispersion; probability distributions; hypothesis testing; confidence interval estimation; analysis of variance; regression and correlation. Prerequisites: MTH 1000 or MTH 1001 or MTH 1701.

BUS 3208 FEDERAL INCOME TAX 1 (3 credits). Introduces federal income tax- ation of individuals and business organizations. May include an overview of the federal tax system and tax law, taxable and tax-exempt income, deductible and nondeductible expenses, credits, the tax effects of property transactions and the tax implications of different organizational forms for a business. Prerequisites: BUS 2212.

BUS 3211 INTERMEDIATE ACCOUNTING 1 (3 credits). Studies financial reporting concepts and generally accepted accounting principles including the accounting cycle, current assets and current liabilities, emphasizing analysis of financial events and financial reporting alternatives. Prerequisites: BUS 2212.

BUS 3212 INTERMEDIATE ACCOUNTING 2 (3 credits). Continues the study of financial reporting concepts and generally accepted accounting principles including plant assets, intangible assets, long-term liabilities, leases and stockholders' equity, emphasizing analysis of financial events and financial reporting alternatives. Prerequisites: BUS 3211.

BUS 3213 COST AND MANAGERIAL ACCOUNTING (3 credits). Preparation of accounting information for use in management as an aid to decision making. May include cost behavior and cost-volume-profit analysis, cost allocations, determining the cost of a product or service, inventory control, performance evaluation, profitability analysis and use of accounting information in decision making and capital budgeting. Prerequisites: BUS 3211.

BUS 3214 ACCOUNTING INFORMATION SYSTEMS (3 credits). Examines accounting information systems used in business organizations. Includes discussions of accounting system design, implementation and control of computer-based systems for managerial planning, decision-making and control of an enterprise. Prerequisites: BUS 2212.

BUS 3401 CORPORATE FINANCE (3 credits). Surveys the components of the three basic issues that embody the financial management of a firm: capital budgeting, capital structure and short-term finance and net working capital. Also examines corporate governance, ethics and international issues. Prerequisites: BUS 2212.

BUS 3404 PERSONAL FINANCIAL PLANNING (3 credits). Prepares students to maximize resources in lifelong personal financial planning. Includes budgeting, credit management, insurance, home ownership, investments and tax, retirement and estate planning. Prerequisites: MTH 1000 or MTH 1001 or MTH 1701 or MTH 1702.

BUS 3500 HUMAN-COMPUTER INTERACTION (3 credits). Gives theoretical and practical experience with human-computer interaction concepts. Addresses empirical, cognitive, predictive and anthropomorphic approaches to HCI. Includes computer task analysis, HCI design guidelines, usability engineering, and testing and enhancing Web design interaction. (Requirement: Prerequisite course or computer literate.) Prerequisites: BUS 1601.

BUS 3501 MANAGEMENT PRINCIPLES (3 credits). Helps students acquire management knowledge and develop management skills. Enables the student to understand management as it relates to both the employer and employee, and acquaints the student with the various schools of management and the philosophy of management. (Requirement: Sophomore standing.)

BUS 3503 HUMAN RESOURCE MANAGEMENT (3 credits). Provides the student with the foundation to embark on further study in the area of human resource management. Includes equal employment opportunity, staffing the organization, training and development, performance appraisals, compensating employees, safety and health issues and labor relations. Prerequisites: BUS 5301.
BUS 3504 MANAGEMENT INFORMATION SYSTEMS (3 credits). Examines information systems used in business organizations. Includes discussions of system design, implementation and control of computer-based systems for managerial planning, decision-making and control of an enterprise. (Students may take BUS 3501 as either a prerequisite or as a corequisite.) Prerequisites: BUS 1601 or CSE 1301.

BUS 3509 INTRODUCTION TO SPORTS MANAGEMENT (3 credits). Examines the multiple contexts in which management principles are applied within the general sports context. Includes discussions of sports and recreation programs, sports communication and marketing, facilities and event management, and professional development in sports management. Prerequisites: BUS 3501.

BUS 3510 ADVANCED COMPUTER BUSINESS APPLICATIONS (3 credits). Uses Virtual Basic programming to provide an environment and language for building custom programs that extend Office's capabilities. Students learn to build customized business information systems that are fully integrated with standard Microsoft Office applications. (CL) Prerequisites: BUS 1601.

BUS 3511 SYSTEMS ANALYSIS AND DESIGN (3 credits). Introduces and applies concepts, methods and tools for systems development life-cycle (SDLC) phases, planning, analysis, design, implementation and maintenance during the development of an information system. Emphasizes critical thinking and problem-solving as an applied approach to developing information systems. Prerequisites: BUS 3504.

BUS 3512 SYSTEMS DESIGN AND DEVELOPMENT FOR BUSINESS (3 credits). Introduces students to systems development life cycle and other structured analysis and design techniques. Includes computer-aided software engineering tools and concepts support the design, development, implementation and documentation of software projects. Presents a modern approach to systems analysis and design. Prerequisites: BUS 3504 or CSE 2410.

BUS 3514 INTRODUCTION TO OPERATING SYSTEMS AND NETWORKS FOR BUSINESS (3 credits). Provides understanding of computer operating systems and networks while avoiding technical discussions covered in traditional operating systems and networking courses. Focus is on practical aspects of evaluating operating system and network alternatives for business. Prerequisites: BUS 3504.

BUS 3516 ENTERPRISE RESOURCE PLANNING SYSTEMS (3 credits). Provides an understanding of enterprise resource planning (ERP), the process-centered organization, integration of enterprise systems, and how ERP supports global business. Focuses on the ERP concept, basic principles of enterprise system software, and the technical issues in applying enterprise systems software in decision-making, using SAP R/3. Corequisites: BUS 3504.

BUS 3517 INFORMATION ASSURANCE AND SECURITY (3 credits). Covers information security systems within organizations. Emphasizes systems controls, identifying threats, and techniques for auditing and monitoring access control, and planning, designing, implementing, managing and auditing security including enterprise systems. Covers accidental and intentional breaches of security and disaster recovery. Prerequisites: BUS 3514.

BUS 3521 INTRODUCTION TO DATABASE SYSTEMS (3 credits). Introduces concepts, models and technologies for the design, implementation and management of database systems. Applies database technologies for real-world experience in designing and implementing database systems. Prerequisites: BUS 3511.

BUS 3550 SUPPLY CHAIN MANAGEMENT (3 credits). Focuses on supply chain management (SCM) from a global perspective. Encompasses operations management, purchasing and logistics in managing the supply chain. Covers how supply chain processes and activities are optimized from suppliers to consumers. (Requirement: Junior standing.)

BUS 3551 MATIERIEL ACQUISITION MANAGEMENT (3 credits). Examines the life-cycle process of the acquisition of material and materiel systems. Includes systems management and its application from acquisition to termination. Studies need requirements, cost and schedule considerations and procurement procedures. Also includes the evaluation and development of purchasing systems. Prerequisites: BUS 3550.

BUS 3553 MANAGEMENT OF TRANSPORTATION SYSTEMS (3 credits). Reviews the history of transportation. Includes the advantages and disadvantages of various carrier modes. Emphasizes management problems common to all modes of domestic and international transportation. Also discusses transportation engineering, use of facilities, and materiel, economic, personnel, labor and union aspects. Prerequisites: AVM 3303.

BUS 3601 MARKETING PRINCIPLES (3 credits). Examines the principles of marketing. Emphasizes the marketing concept, functions, consumer behavior, market segmentation, marketing strategy, marketing mixes, market research, marketing legislation and marketing control, as well as providing a foundation for higher-level courses in marketing.

BUS 3603 ADVERTISING AND PROMOTION MANAGEMENT (3 credits). Covers various advertising techniques used in radio, TV, magazines, newspapers, direct mail and billboards, including the relative advantages of the different media. Also reviews the integration of advertising as one element within the promotional and marketing mix. Prerequisites: BUS 3601.

BUS 3605 CONSUMER BEHAVIOR (3 credits). Examines the consumer decision-making process and its societal, cultural, environmental, group and economic determinants. Includes consumer motivations, values, wants and needs. Teaches how to develop marketing strategies that effectively serve consumers, and how to use the managerial perspective to improve marketing strategy decisions. Prerequisites: BUS 3601 or EMK 3601.

BUS 3607 MARKETING RESEARCH (3 credits). Introduces measurement and research techniques, problem identification and resolution through formal theory, and evaluation and interpretation of market research. Emphasizes design, execution, analysis and interpretation of both qualitative and quantitative primary research. Requires production of a formal report from primary research. Prerequisites: BUS 3601 or EMK 3601.

BUS 3611 ENTERTAINMENT AND SPORTS MARKETING (3 credits). Teaches how to distinguish, identify and design events using market research. Includes types of promotions, key components and strengths in branding, and how to develop a marketing plan. Focuses on the complexity of relationship marketing (sponsorship, fan development, merchandising and event marketing) through promotion strategies. Prerequisites: BUS 3601 or EMK 3601.

BUS 3612 HOSPITALITY AND TOURISM MARKETING (3 credits). Introduces the key drivers of customer satisfaction and behavior. Explores the scope, complexity and challenges of the hospitality, recreation and travel industries. Focuses on situation analysis, and the planning and management of facilities to increase customer value, loyalty and satisfaction. Prerequisites: BUS 3601 or EMK 3601.

BUS 3700 INTRODUCTION TO LINEAR PROGRAMMING (1 credit). Introduces the formulation, solution and interpretation of linear programming models used to solve business problems. Noncredit for College of Business majors. Prerequisites: BUS 2703 or MTH 1702.

BUS 3704 QUANTITATIVE METHODS (3 credits). Emphasizes management science and operations research techniques in solving managerial problems. Includes linear programming, sensitivity analysis, transportation and assignment problems, inventory models, CPM and PERT analysis, decision analysis and queuing analysis. Prerequisites: BUS 2703, MTH 1001 or MTH 1702.

BUS 3705 MANAGING SMALL BUSINESS (3 credits). Focuses on the practical aspects of successfully launching and managing a small-business enterprise. Presents relevant topics that enable the student to better evaluate entrepreneurial opportunities, choose small business ownership, and to foresee potential pitfalls in operating a small business entity. (Requirement: Junior standing.)

BUS 3801 CROSS-CULTURAL MANAGEMENT (3 credits). Examines the importance of effectively managing soft skills in a global organizational context. Specifically emphasizes the impact of national culture in shaping values, behaviors and employment practices in organizations operating within a global environment. Prerequisites: BUS 3501.

BUS 3802 GLOBAL MACROECONOMIC ISSUES (3 credits). Explores the macroeconomic interdependence of global economics. Examines the working of monetary and fiscal policies under various exchange-rate regimes and uses international case studies to assess the policy dilemma, the trade-off among exchange rate stability, price stability and independent monetary policy. Prerequisites: BUS 2303, BUS 2304.

BUS 3999 RESEARCH 1 (1 credit). Includes selection of an industry and completion of a research plan for analysis of that industry. Covers primary and secondary research, research design and resources available for environmental and industry analysis. First of a three-course QEP research sequence. (Requirement: Second semester junior standing.) (Q)

BUS 4000 RESEARCH 2 (1 credit). Continues BUS 3999 by carrying out the environmental and industry research planned during the previous course. Includes collecting, organizing and analyzing relevant information that affects the multiple environments in which a company operates. Second of a three-course QEP research sequence. (Q) Prerequisites: BUS 3999. Corequisites: BUS 4702.

BUS 4001 RESEARCH 3 (1 credit). Engages students in the revision and resubmission process, culminating in a final research paper. Applies communication skills in the development of a public poster session and discussion with community participants. Third of a three-course QEP research sequence. (Q) Prerequisites: BUS 4000.

BUS 4211 INTERNAL AUDIT (3 credits). Examines the professional responsibilities of auditors; professional auditing standards and ethical responsibilities; audit programs, procedures and evaluation of evidence; review and evaluation of internal controls and risks; and effective audit communication. Prerequisites: BUS 3211.
BUS 4216 GOVERNMENTAL ACCOUNTING (3 credits). Covers the principles and procedures of accounting, financial reporting, and budgeting for governmental and nonprofit entities. Includes general funds and special revenue funds, capital project funds, enterprise funds, fiduciary funds, and accounting for colleges and universities, healthcare entities, and voluntary health and welfare organizations. Prerequisites: BUS 3211.

BUS 4218 ADVANCED BUSINESS LAW (3 credits). Covers legal concepts underlying the sale of goods, commercial paper, security interests, securities regulation, accountant malpractice, negotiable instruments, application of the Uniform Commercial Code (emphasizes contracts and torts) and bankruptcy. Prerequisites: BUS 2601.

BUS 4220 INTERNATIONAL ACCOUNTING AND REPORTING (3 credits). Applies the principles of international financial reporting standards (IFRS) to case studies/practical examples and examines the impact of these standards on financial reporting. For College of Business majors only. (Requirement: Prerequisite course or instructor approval. Must be taken in the final semester before graduation.) Prerequisites: BUS 3212.

BUS 4284 ACCOUNTING PRACTICUM (3 credits). Real-world business experience that complements the varied academic disciplines covered in the accounting curriculum. Minimum requirements include written and oral presentations, weekly summary reports and 150 hours working at a host employer's location. Must be taken in the final semester before graduation. For accounting majors only. Prerequisites: BUS 4783. Corequisites: BUS 4702.

BUS 4401 INVESTMENT ANALYSIS (3 credits). Introduces investment analysis. Includes capital market theory, portfolio theory and management, and derivatives. Discusses current issues with respect to the securities markets. Prerequisites: BUS 3401.

BUS 4402 SPECIAL TOPICS IN FINANCIAL MANAGEMENT (3 credits). Covers special topics pertaining to the field of finance including the financial environment, financial tools and models, along with the advanced study of financial institutions and corporate finance. Blends advanced theory with practical application. Prerequisites: BUS 3401.

BUS 4425 ENVIRONMENTAL AND URBAN PLANNING (3 credits). Introduces the concepts and implementation strategies for productive urban and environmental planning. (Requirement: Senior standing or prerequisite course.) Prerequisites: BUS 3501.

BUS 4426 ENVIRONMENTAL AND RESOURCE ECONOMICS (3 credits). Introduces the behavioral sources of environmental problems. Includes property rights, externalities, cost-benefit analysis, depletable and recyclable resources, pollution control, population growth, sustainable development, ecotourism and environmental justice. (Requirement: Senior standing.) Prerequisites: BUS 4702 or MTH 1702.

BUS 4501 PRODUCTION/OPERATIONS MANAGEMENT (3 credits). Introduces current theory and practice in production and operations management. Includes forecasting, quality, product/service design, work methods, facility layout and location, scheduling, inventory and project management. Prerequisites: BUS 3704.

BUS 4502 ORGANIZATIONAL BEHAVIOR AND THEORY (3 credits). Overviews classical and contemporary approaches to organizational behavior and theory. Focus progresses from the micro (individual behavior) to macro (organizational processes, effectiveness and change). Special attention is given to group behavior. Prerequisites: BUS 3501.

BUS 4503 BUSINESS ETHICS (3 credits). Applies moral reasoning to work-related challenges encountered in modern organizations. Students consider personal values and organizational values in examining organizational culture as a metaphor for the moral environment of organization. Uses cases from business and government to help students practice. Prerequisites: BUS 3501.

BUS 4504 SPECIAL TOPICS IN MANAGEMENT (3 credits). Includes subjects or issues that are of current concern to business and government organizations. Also provides students with an opportunity to study in greater depth, topics that may have been just surveyed in other courses. Normally requires a research paper. May be repeated for a maximum of nine credits. Prerequisites: BUS 3501.

BUS 4508 WEB-BASED TECHNOLOGIES (3 credits). Explores concepts and practice of the implementation and delivery of Web-enabled information systems. Combines concepts and principles from database design, programming and Internet technology. Focuses on implementation, emphasizing hands-on design and development of Web-based information systems. Prerequisites: BUS 3511, BUS 3514.

BUS 4509 MANAGEMENT OF DATABASE SYSTEMS (3 credits). Concepts of database systems in a relational database management software (RDBMS) environment, emphasizing data modeling, design and implementation. The entity-relationship model is used for conceptual design and an RDBMS is used for the physical design. Students are required to design a functional database. Prerequisites: BUS 3512.

BUS 4516 GLOBAL STRATEGIC MANAGEMENT OF TECHNOLOGY (3 credits). Emphasizes technology, strategy and global competitive advantage. Develops the practical tools of strategy, planning and implementation at business and corporate levels. Investigates the strategies of technology-intensive international companies. Requires student teams to develop a five-year strategic plan for a global company or business unit. (Requirement: Senior standing.) Prerequisites: BUS 3511.

BUS 4518 eBUSINESS DESIGN AND IMPLEMENTATION (3 credits). Examines e-commerce from business-to-consumer, business-to-business and intra-organizational perspectives. Also includes ERP, ASP, CRM, auctions and exchanges, data mining, ethics and security concerns. Requires group and final projects on the design and development of working e-commerce systems. Prerequisites: BUS 3516, BUS 3518.

BUS 4520 LEADERSHIP THEORY AND PRACTICE (3 credits). Reviews and analyzes classical and contemporary leadership theories. Emphasizes how each approach can be applied in real-world organizations. Prerequisites: BUS 3501 or BUS 4502.

BUS 4521 ADVANCED DATABASE SYSTEMS (3 credits). Covers advanced topics in database management systems. Includes query processing and optimization strategies, security and privacy, data mining and warehousing, and emerging database technologies. Prerequisites: BUS 3521.

BUS 4522 DATABASE ADMINISTRATION (3 credits). Covers concepts, procedures and tools for implementing, maintaining and administering a database system. Uses technology as an applied approach to exploring database administrator roles and responsibilities. Prerequisites: BUS 3521.

BUS 4532 INFORMATION SECURITY MANAGEMENT (3 credits). Examines the theory, concepts and techniques involved in information security to meet specific business needs from an information system manager's perspective. Builds on knowledge of networks, operating systems and information assurance. Prerequisites: BUS 3517.

BUS 4550 ADVANCED TECHNIQUES IN SUPPLY CHAIN MANAGEMENT (3 credits). Covers advanced theory and practice of supply chain management (SCM). Includes operational logistics support and the concepts and tools of electronic communications and information technology systems. Studies the strategy, organizational structure and new technologies in SCM. Also covers planning, program design and quality assurance. Prerequisites: BUS 3550.

BUS 4552 INVENTORY CONTROL MANAGEMENT (3 credits). Includes management techniques and methods related to the life-cycle management of material. Addresses material management systems and concepts of standardization, modernization, material reserve, cataloging, pre-ordering, storage and distribution. Applies management principles to inventory control. Prerequisites: BUS 3550.

BUS 4553 INTEGRATED LOGISTICS MANAGEMENT (3 credits). Covers the structure of the integrated logistics management (ILM) philosophy and how to apply information technology processes and systems to ILM. Provides the framework for integrated logistics support (ILS). Discusses the management tools available to logistics managers and places ILS in perspective within the acquisition process. Prerequisites: BUS 3550.

BUS 4555 PROCUREMENT AND CONTRACT MANAGEMENT (3 credits). Covers the principles and management processes by which organizations contract for goods and services. Emphasizes the procurement activities of the U.S. federal government. Includes legal requirements for the formation, performance and modification of a contract relationship, and how to prevent disputes, controversies and cost overruns. (Requirement: Senior standing.) Prerequisites: BUS 2601.

BUS 4583 SENIOR PROJECT (3 credits). Provides the experience of applying the concepts, tools and techniques introduced in previous courses. Project teams analyze, develop and reengineer the requirements for solving a real world management information system problem. Prerequisites: BUS 4509 or CSE 4020.

BUS 4584 MIS PRACTICUM (3 credits). Real-world MIS managerial experience complements the varied academic disciplines covered in the curriculum. Minimum requirements include written and oral presentations, weekly summary reports and 150 hours working at a host employer's location. Must be taken in the final semester before graduation. For business management information systems majors only. Prerequisites: BUS 4783. Corequisites: BUS 4702.

BUS 4601 MARKETING ANALYSIS AND STRATEGY (3 credits). Advanced study of the managerial aspects of marketing to include the decision areas pertaining to the marketing environment, opportunity analysis, marketing strategy and product, channel, price and promotional decisions. Uses cases to aid the student in experiencing real-life business situations. Prerequisites: BUS 3601 or EMK 3601.

BUS 4605 RETAIL MANAGEMENT (3 credits). Presents the point of view of a potential manager. Provides a foundation for management decision-making in a rapidly changing retail environment. Includes retail strategy, service retailing, legal and ethical issues, information systems, buyer behavior, merchandise management and international retailing. Prerequisites: BUS 3501 or EMG 3301, BUS 3601 or EMK 3601.

226 Florida Tech
BUS 4607 BRAND MANAGEMENT MARKETING (3 credits). Introduces branding as it relates to consumer behavior. Includes creating and sustaining shareholder value through brands. Uses theory and real-world cases to examine branding in terms of positioning, design and packaging, integration, brand equity and corporate identity. Requires initiation and completion of a brand audit. Prerequisites: BUS 3601 or EMK 3601.

BUS 4684 SENIOR BUSINESS RESEARCH (3 credits). Familiarizes the student with research methodologies commonly used in the social sciences. The essential goals are to enable students to conduct research and interpret research findings and assess the quality of published research. (Requirement: Senior standing.) Prerequisites: BUS 2703.

BUS 4686 INTERNATIONAL MARKETING (3 credits). Addresses the importance of gathering, analyzing, disseminating and responding to international sources of marketing intelligence. Students learn to analyze environmental forces, make marketing mix decisions, and plan and implement international market entry strategies. Prerequisites: BUS 3601.

BUS 4687 CONSUMER BEHAVIOR (3 credits). Examines the consumer decision-making process and its societal, cultural, environmental, group and economic determinants. Gives particular attention to the consumer motivations, values, wants and needs in determining consumer behavior. Prerequisites: BUS 3601.

BUS 4701 INTERNATIONAL BUSINESS (3 credits). Introduces the environmental factors confronting managers in international operations: cultural, economic, legal, political and institutional determinants. Examines problems associated with managing organizational, financial, marketing and production policies in a global marketplace. Prerequisites: BUS 3401, BUS 3501.

BUS 4702 BUSINESS STRATEGY AND POLICY (3 credits). Reviews basic concepts and techniques used in formulating competitive strategy at the corporate, business and functional levels. Introduces business models to provide a learning experience in quantitative aspects of strategy formulation in a competitive environment. Must be taken in the final semester before graduation. Corequisites: BUS 4000.

BUS 4705 FINANCE IN PRIVATELY OWNED COMPANIES (3 credits). Explores alternative capital structures and financial structures of private companies, managing cash balances and cash flow to sustain company growth, questions of intellectual property and the valuation of non-publicly traded companies. Prerequisites: BUS 3401.

BUS 4782 PRACTICUM IN BUSINESS (6 credits). Real-world business experience complements the varied academic disciplines covered in the business curriculum. Minimum requirements include written and oral presentations, weekly summary reports and 240 hours working at a host employer's location. Must be taken in the final semester before graduation. (Requirement: Senior standing in business.) Corequisites: BUS 4702.

BUS 4783 PRACTICUM PLANNING (0 credits). Allows the student real-world business experience that complements the varied academic disciplines covered in the business curriculum. The planning process must be taken in the second to last semester before graduation. (Requirement: Senior standing in business.)

BUS 4786 MAJOR FIELD PRACTICUM (3 credits). Links academic study and the practices of the major field of study in the workplace. Requires written and oral presentations, weekly summary reports and 150 work hours at a host employer's location. For College of Business majors only. (Requirement: Must be taken in the final semester before graduation.) Prerequisites: BUS 4702, BUS 4783.

BUS 4790 DIRECTED BUSINESS STUDY (3 credits). Studies in depth the topics or problems of current interest to practicing managers. Requires students to develop and present a formal report that includes a statement of the objectives of the study effort, survey of the literature, methodology, analysis, results, conclusions and, if appropriate, recommendations. (Requirement: Associate dean approval.)

BUS 4801 INTERNATIONAL TRADE (3 credits). Investigates why nations trade, what they trade and how they benefit from exchange. Includes topics on classical, neoclassical, modern and post-modern theories of trade; commercial policy instruments and their welfare effects; economic integration; international factor movements; and trade development. Prerequisites: BUS 3802.

BUS 4802 GLOBAL ACCOUNTING AND TAX (3 credits). Integrates the functional areas of accounting with business administration in a global decision-making framework. Provides business managers with an understanding of the numerous differences that exist between countries and the problems multinational companies face in interpreting international accounting information. Prerequisites: BUS 2211, BUS 2212.

BUS 4803 GLOBAL FINANCIAL MANAGEMENT (3 credits). Extends the principles of finance to an international context. Emphasizes currency fluctuation, measuring and hedging exchange rate risk, comparative capital structure, multinational investment, international capital budgeting and taxes. Prerequisites: BUS 3401, BUS 3802.

BUS 4804 BUSINESS IN THE WESTERN HEMISPHERE (3 credits). Introduces the business environment and practices of Western Hemisphere countries. Includes both theoretical and practical experience with environmental factors confronting managers in international operations. Also includes research and study of the history and economic development of major economies of the Western Hemisphere. Prerequisites: BUS 3801, BUS 3802.

BUS 5011 MANAGEMENT THEORY AND THOUGHT (3 credits). Overviews classical and contemporary management philosophies and theories. Focuses on managing enterprises in today's rapidly changing global economy. Includes developing strategic vision, planning, organizing, directing and controlling, social responsibility and international management.

BUS 5017 PROGRAM MANAGEMENT (3 credits). Studies the responsibility and authority of a program manager and the integration of program functions in complex organizational structures. Discusses interpersonal relationships within matrix organizations, as well as program conflict resolution and organizational priorities. (Requirement: Prior completion of foundation requirements.)

BUS 5023 MANAGEMENT AND ADMINISTRATION OF CONTRACTS (3 credits). Offers a comprehensive analysis of the procurement process and the resulting contractual relationships. Topics range from a history of procurement through considerations dealing with applicable laws, policies, regulations, methods of contracting, types of contracts and cost-pricing principles.

BUS 5070 SPECIAL TOPICS IN BUSINESS (3 credits). Independent study in some area of business that allows the student to work closely with a faculty member and probe a subject within the business discipline in greater depth than is normally possible in a regular class. Requires a comprehensive term paper.

BUS 5138 BUSINESS ETHICS (3 credits). Aims primarily to increase student understanding of the concepts of moral philosophy and their relevance to decision-making. Provides an opportunity for students to apply this understanding in a wide variety of practical management settings. Makes extensive use of case analyses. (Requirement: Prior completion of foundation requirements.)

BUS 5211 PROCUREMENT AND CONTRACT MANAGEMENT (3 credits). Overviews in depth the federal acquisition process and introduces the basic concepts, policies and procedures incident to government contracting through the FAR and supplementing directives.

BUS 5213 CONTRACT CHANGES, TERMINATIONS AND DISPUTES (3 credits). Uses case studies and lectures to provide an in-depth examination of the post-award management problems associated with contract administration. Covers contract changes, terminations and disputes, as well as other issues. Prerequisites: BUS 5211.

BUS 5214 COST PRINCIPLES, EFFECTIVENESS AND CONTROL (3 credits). Financial and accounting overview of government acquisition policy and procedures. Prerequisites: BUS 5400.

BUS 5217 CONTRACT AND SUBCONTRACT FORMULATION (3 credits). Studies in depth the pre-award phase of the federal acquisition process. Uses class discussions and case studies to examine management problems from the perspective of the contracting office, requisitioner, courts, Congress and the contractors. Prerequisites: BUS 5211.

BUS 5218 CONTRACT NEGOTIATIONS AND INCENTIVE CONTRACTS (3 credits). A seminar in which negotiation concepts and techniques are explored, analyzed, discussed and then placed into practice using mock negotiations. Examines all types of contracts. Prerequisites: BUS 5211.

BUS 5220 CONTRACT MANAGEMENT RESEARCH SEMINAR (3 credits). Advanced research seminar devoted to study and research of topical government contract management issues. Prerequisites: BUS 5211.

BUS 5307 MANAGING HUMAN FACTORS (3 credits). Gives theoretical and practical experience with human-computer interactive system design concepts. Includes next generation user interfaces, computer task analysis, human-computer design guidelines and history, usability engineering, and testing and enhancing Web design interaction.

BUS 5400 LEGAL, ETHICAL AND SOCIAL ENVIRONMENTS OF BUSINESS (3 credits). Investigates technical, governmental and legal responsibilities of business in light of political, moral, social and jurisprudential considerations. Students learn to better analyze and deal with fundamental issues concerning the nature of society, both as citizens and administrators. Not for required or elective MBA credit.

BUS 5410 QUANTITATIVE METHODS FOR BUSINESS DECISIONS (3 credits). Presents applications of quantitative management science techniques used to analyze managerial problems. Mathematical and statistical concepts used include differential and integral calculus, linear and matrix algebra, descriptive and inferential statistics, and linear programming. Not for required or elective MBA credit.
BUS 5411 STATISTICAL METHODS FOR BUSINESS (3 credits). Students learn to apply statistical methods to compare, examine and estimate the outcome of various management options. Includes statistical estimation, hypothesis testing, regression analysis, ANOVA, correlation analysis, sampling, time-series, decision theory and use of SPSS.

BUS 5420 MACROECONOMICS (3 credits). Concerned with the determination, at the national level, of production, employment, inflation and growth. An international perspective is taken as macroeconomic policies are examined in the presence of both goods and asset flows. Also explores how changing macroeconomic conditions affect the international business environment. Not for required or elective MBA credit.

BUS 5421 MANAGERIAL ECONOMICS (3 credits). Provides an understanding of the microeconomic forces that influence firm decision-making. Includes competitive markets and market failure, benefit-cost analysis, demand estimation and forecasting, decision-making under risk and uncertainty, production and cost estimation, and market structure analysis.

BUS 5426 ENVIRONMENTAL AND RESOURCE ECONOMICS (3 credits). Introduces the behavioral sources of environmental problems. Includes property rights, externalities, cost-benefit analysis, depletable and recyclable resources, pollution control, population growth, sustainable development, ecotourism and environmental justice.

BUS 5430 FINANCIAL ACCOUNTING (3 credits). Studies accounting concepts, the accounting model, measurement processes, financial statements, financial analysis, the accounting cycle, monetary and fixed assets, inventory, current and long-term liabilities and equity structures of partnerships, proprietorships and corporations. Not for required or elective MBA credit.

BUS 5431 MANAGERIAL ACCOUNTING (3 credits). Focuses on internal reporting to managers for use in planning and control, in making nonroutine decisions and in formulating major plans and policies. Covers cost-volume-profit relationships, flexible budgets and standards, job order and process cost, and cost allocation and accumulation.

BUS 5432 ADVANCED ACCOUNTING (3 credits). Provides the accounting major with intensive exposure to the subject of accounting for business combinations in a format designed to further the student's ability to solve complex accounting problems involving worksheet techniques. (Requirement: Instructor approval.)

BUS 5433 ADVANCED PROBLEMS AND CURRENT TOPICS (3 credits). Broadly exposes the accounting major to advanced subjects in accounting, furthers the student's ability to analyze and present solutions to complex accounting problems, as well as interpret and apply theoretical issues; and develops the student's communication and presentation skills. (Requirement: Instructor approval.)

BUS 5434 ADVANCED AUDITING THEORY AND APPLICATION (3 credits). Calculates the audit program to the theory of auditing and development of audit programs, procedures for obtaining audit evidence, and auditor responsibilities under Securities and Exchange Commission requirements. (Requirement: Instructor approval.)

BUS 5435 TAX AND FINANCIAL ACCOUNTING RESEARCH (3 credits). Examines the various primary and secondary authorities available for answering questions in the area of tax and financial reporting. The main purpose is not to teach the respective rules in the areas of tax and financial reporting, but to teach students how to find authoritative answers to problems in these areas. (Requirement: Instructor approval.)

BUS 5436 GOVERNMENTAL AND NONPROFIT ACCOUNTING (3 credits). Principles and procedures of accounting, financial reporting and budgeting for governmental and nonprofit entities. Includes general funds and special revenue funds, capital project funds, enterprise funds, fiduciary funds, and accounting for colleges and universities, healthcare entities and voluntary health and welfare organizations. (Requirement: Instructor approval.)

BUS 5437 INFORMATION SYSTEMS AUDITING/CONTROL (3 credits). Process of obtaining and evaluating internal audit evidence and communicating audit results. Includes method to assess organizational risks, controls and performance, and professional auditing standards and auditors' ethical responsibilities. (Requirement: Instructor approval.)

BUS 5438 FRAUD EXAMINATION (3 credits). Oversees the nature of fraud (asset misappropriation, corruption and fraudulent statements), how it is committed and how it can be detected, investigated and prevented.

BUS 5439 FORENSIC ACCOUNTING (3 credits). Provides exposure to the investigation of accounting procedures and techniques used in litigation support. Includes financial reporting fraud, forensic accounting techniques, income reconstitution methods, testifying as an expert witness, evidence management, cybercrime and business valuations.

BUS 5440 FINANCIAL MANAGEMENT (3 credits). Studies the concepts and tools of corporate financial management and financial planning, including capital budgeting, capital structure and net working capital. Considers the importance of ethics in financial decision-making.

BUS 5444 FINANCE MARKETS AND INSTITUTIONS (3 credits). Presents an analysis of financial institutions and the interrelationships among intermediaries in both money and capital markets. Considers the functions of the Federal Reserve and its effect on interest rates and financial markets. Focuses on commercial banks and other depository institutions, investment banks and mutual funds. Prerequisites: BUS 5421, BUS 5440.

BUS 5446 INVESTMENT MANAGEMENT (3 credits). Investigates the concepts, theories and techniques underlying the development of investment policies and strategies.

BUS 5447 ENTREPRENEURIAL FINANCE (3 credits). Explores both the capital structure and financial needs of a start-up company. In addition, students gain an understanding of intellectual property, as well as the techniques used to value nonpublicly traded companies. Prerequisites: BUS 5440.

BUS 5448 PORTFOLIO ANALYSIS (3 credits). Focuses on understanding the theory and practice of combining financial assets into portfolios. Examines the importance of sector selection in asset allocation. Investigates the diversification of portfolios. Prerequisites: BUS 5446.

BUS 5450 ORGANIZATIONAL BEHAVIOR (3 credits). Presents existing research, theories and models explaining how individual and group behavior and processes shape the internal dynamics of organizations. Provides the foundation to understand contemporary debates concerning alternative organizational designs and management practices.

BUS 5455 PERSONNEL MANAGEMENT (3 credits). Surveys personnel management practices and procedures, including wage and salary considerations, employee benefits and incentives, and labor-management relations. Emphasizes the individual within the organization and the development of the human resource.

BUS 5456 EMPLOYMENT LAW (3 credits). Examines federal regulations governing the relationship between employers and employees, and emphasizes their respective rights and responsibilities. Includes discrimination, sexual harassment, affirmative action, privacy, terminating employees, compensation and benefit regulations, family leave, and safety and health. Prerequisites: BUS 5400.

BUS 5457 NEGOTIATION AND CONFLICT RESOLUTION (3 credits). Examines the management of conflict in organizations at the level of the individual and the group. Provides a background in alternatives to litigation models including negotiation, mediation, peer-review systems and arbitration. Uses simulation exercises to develop the student's skills in applying various forms of dispute resolution.

BUS 5458 LEADERSHIP THEORY AND EFFECTIVE MANAGEMENT (3 credits). Teaches the leadership process and techniques used to train leaders by reading the literature, analyzing cases of corporate leadership and participation in experiential exercises that are used in leadership training. Also reinforces leadership skills of interpersonal interaction, written analysis and oral presentation. Prerequisites: BUS 5450.

BUS 5460 MANAGEMENT INFORMATION SYSTEMS (3 credits). Addresses policy and management issues surrounding information systems in today's enterprises: strategic use, organizational impact, project management, human resource issues and other topics germane to understanding management information systems.

BUS 5461 PRODUCTION AND OPERATIONS MANAGEMENT (3 credits). Covers the translation of product and service requirements into facilities, procedures and operating organizations. Includes product design, production alternatives, facilities location and layout, resource requirements planning, quality control and project management. Uses live case analyses.

BUS 5462 INFORMATION SECURITY (3 credits). Covers information security techniques from a managerial perspective. Includes network and host security, cryptography, authentication, security policies, intrusion detection and forensics, and related managerial responsibilities. Prepares the student for the Center for Immigration and National Security (CINCS) Level-1 examination.

BUS 5465 MANAGING INFORMATION (3 credits). Explores how organizations gather, represent, process and distribute information and knowledge to employees and customers. Includes knowledge management, knowledge workers productivity, data and process modeling and data mining. Examines major issues relating to information processing and its management at the individual, group, and organizational levels.

BUS 5466 MANAGING SYSTEMS (3 credits). Provides a foundation of critical issues in the design and implementation of business and information systems change. Focuses on the interdependence of information technologies and organizational characteristics by examining managing business redesign, IT leadership, managing projects and changes, and managing enterprise information systems.

BUS 5467 MANAGING ELECTRONIC COMMERCE (3 credits). Examines the use of electronic commerce from business to consumer, business to business and intra-organizational perspectives to reflect the Internet and global communications networks that have emerged as powerful strategic assets, providing increased opportunity and uncertainty for business leaders.
BUS 5470 MARKETING MANAGEMENT (3 credits). Examines the tools and techniques of managing marketing activities as well as an analysis of the marketing process. Emphasizes decision-making, the refinement of skills needed to recognize and solve marketing problems, and effective communication of recommendations. Uses case analysis extensively.

BUS 5476 INTERNATIONAL BUSINESS (3 credits). Examines the basic concepts of information technology and marketing in forming a business plan for a product or service in a case study. First course in a two-course sequence.

BUS 5478 CORPORATE INNOVATION AND NEW VENTURES (3 credits). Covers the discovery and identification of new business opportunities, the process of creation within the context of a mature company, the processes of growth through acquisition, and the absorption, discontinuance or spinning out of businesses.

BUS 5487 NEW VENTURE DEVELOPMENT (3 credits). Students examine the critical elements of creating and nurturing new business ventures; screen and evaluate ideas in the formulation phase, identify sources of funds and determine means to obtain financing; select a start-up activity and prepare a business plan that represents the basis for forming a company.

BUS 5488 CORPORATE INNOVATION AND NEW VENTURES (3 credits). Examines necessary tools required to plan and run a successful business venture. Requires integration of concepts, methods and models from accounting, economics and marketing in forming a business plan for a product or service in a case study. First course in a two-course sequence.

BUS 5600 ESSENTIALS OF BUSINESS DEVELOPMENT 1 (3 credits). Examines the functions, problems and decision-making processes of multinational business organizations. Prerequisites: BUS 5440.

BUS 5601 ESSENTIALS OF BUSINESS DEVELOPMENT 2 (3 credits). Builds on BUS 5600. Examines and uses concepts, methods and models from the functional business areas of statistics, finance, management and law. Requires students to integrate each component into a complete business plan. Prerequisites: BUS 5601.

BUS 5602 ESSENTIALS OF BUSINESS DEVELOPMENT 2 (3 credits). Builds on BUS 5601. Examines and uses concepts, methods and models from the functional business areas of statistics, finance, management and law. Requires students to integrate each component into a complete business plan. Prerequisites: BUS 5601.

BUS 5610 DATABASE MANAGEMENT TECHNOLOGY (3 credits). Introduces basic concepts of database management. Examines database systems from organization and management perspectives. Includes concepts, tools and techniques used to design, implement and use a database system. Also includes database architecture, conceptual and relational data models, structured query language (SQL), administration, concurrent processing, and data warehousing and mining. Prerequisites: BUS 5460.

BUS 5611 GLOBAL INFORMATION TECHNOLOGY MANAGEMENT (3 credits). Introduces the basic concepts of information technology and globalization. Identifies ethical, social and cultural considerations in the global marketplace. Includes the complexities of information security and privacy, and the importance of data management and retrieval systems. Also includes enterprise solutions, government policies and regulations, and emerging technologies.

BUS 5619 STRATEGIC MANAGEMENT OF TECHNOLOGY AND INNOVATION (3 credits). Introduces the basic concepts of information technology and innovation from a strategic management perspective. Covers strategic management of high technology companies, emerging technologies in a global marketplace, and aligning product development and system design. Identifies the creation of new products and services, and how new ventures are exploited. Prerequisites: BUS 5460, BUS 5610.

BUS 5621 INTERNET MARKETING (3 credits). Introduces electronic commerce distribution channels, Web-based marketing and promotion, and online marketing strategies for customer acquisition and retention. Includes business models used for Internet marketing, and techniques and methods for online market research and Internet marketing strategies based on the marketing mix. Prerequisites: BUS 5460.

BUS 5622 INTEGRATED MARKETING COMMUNICATION (3 credits). Analyzes communication strategies as an approach for implementing marketing decisions. Provides an understanding of traditional and new delivery modes in facilitating integrated marketing campaigns in changing social and technological environments. Examines the ethical, social and legal issues in marketing communication. Prerequisites: BUS 5460.

BUS 5623 TECHNOLOGIES OF INTERNET MARKETING (3 credits). Covers technologies used for Internet marketing strategies and business initiatives. Includes search engine optimization (SEO), Internet marketing tactics, social media, Web site usability and data analytics. Prerequisites: BUS 5621.

BUS 5629 INTEGRATED INTERNET STRATEGIES (3 credits). Uses case studies to integrate concepts, practices and technologies of Internet marketing. Demonstrates effective Internet marketing campaigns, building and promoting a Web presence, techniques for search engine optimization, and diagnostic and performance tracking using Web analytics. Focuses on the organizational perspective of global strategies. Prerequisites: BUS 5460, BUS 5621, BUS 5623.

BUS 5644 INTERNATIONAL ACCOUNTING AND REPORTING (3 credits). Provides background in international accounting, reporting standards and business operations in a global environment. Includes international financial reporting standards (IFRS). Also includes a comparison of U.S. generally accepted accounting principles (GAAP) and IFRS to develop and enhance critical thinking in financial accounting and reporting. Prerequisites: BUS 5431.

BUS 5646 ADVANCED GOVERNMENTAL AND NONPROFIT ACCOUNTING (3 credits). Examines the procedures of accounting, financial reporting and budgeting for governmental nonprofit entities. Covers the theories behind standards set by the Governmental Accounting Standards Board and its integrated accounting and financial reporting model and introduces research concepts used in governmental and nonprofit accounting. (Requirement: Instructor approval.)

BUS 5650 STRATEGIC COST MANAGEMENT (3 credits). Uses case studies to analyze approaches to managerial accounting. Covers the application of decision and control models, planning and control under conditions of uncertainty, ethics and current issues in the development and practice of managerial accounting. (Requirement: Instructor approval.) Prerequisites: BUS 5431.

BUS 5651 HEALTHCARE POLICY (3 credits). Analyzes key contemporary issues in healthcare policy. Includes design and structure of the U.S. healthcare system, policy initiatives and the roles of government, the private sector, consumers and advocacy groups in setting policy agenda. (Requirement: Must be enrolled in University Alliance.)

BUS 5653 INFORMATION MANAGEMENT IN HEALTHCARE (3 credits). Addresses issues related to the management of information for healthcare practitioners and consumers. Provides insight and experience, and applications of information technology that improve the quality of healthcare communication and delivery, and facilitates healthcare research. (Requirement: Must be enrolled in University Alliance.)

BUS 5654 LEGAL ASPECTS OF HEALTHCARE (3 credits). Analyzes healthcare business entities and the regulations with which they must comply. Discusses individual right to access, and malpractice and its defense. Examines legal perspectives to starting a new healthcare business venture, and information necessary before entering into a joint healthcare venture. (Requirement: Must be enrolled in University Alliance.)

BUS 5656 CONSUMER BEHAVIOR STRATEGIES (3 credits). Examines the consumer decision-making process and its societal, environmental, group and economic determinants. Includes research, analysis and strategy development in consumer motivations, values, wants, needs and behavior. (Requirement: Must be enrolled in University Alliance.) Prerequisites: BUS 5470.

BUS 5657 ADVANCED MARKET RESEARCH (3 credits). Examines the consumer decision-making processes and behavior through the application of qualitative and quantitative research methods. Includes problem identification, secondary research, data gathering, analysis, interpretation and report writing. (Requirement: Must be enrolled in University Alliance.) Prerequisites: BUS 5470.

BUS 5658 HEALTHCARE PLANNING AND MARKETING (3 credits). Discusses and applies the concepts of healthcare planning and marketing to healthcare delivery, assessment of community needs and resource planning in both ambulatory and clinical settings. Includes health services planning and trends, demand for and use of health services, research methods and sources of marketing and planning data. (Requirement: Must be enrolled in University Alliance.)

BUS 5661 STRATEGIC PROJECT MANAGEMENT (3 credits). Covers the role of project management in a business or corporate environment. Teaches how to achieve project goals and objectives within set constraints such as time and budget. (Requirement: Must be enrolled in University Alliance.)
BUS 5662 PROJECT TOOLS AND TECHNIQUES (3 credits). Covers tools and techniques used to plan and control projects and accomplish business objectives. Emphasizes how to determine which tool or technique to use during different phases of the project life cycle. Uses project management software in exercises. (Requirement: Must be enrolled in University Alliance.) Prerequisites: BUS 5661.

BUS 5668 CASES IN APPLIED PROJECT MANAGEMENT (3 credits). Covers planning and managing a project from initiation and execution to closeout, using learned project management concepts. Provides hands-on experience in planning and managing through a student project. Gives insight through case studies and real-world analyses. (Requirement: Must be enrolled in University Alliance.) Prerequisites: BUS 5662.

BUS 5669 MASTERING PROJECT MANAGEMENT (3 credits). Covers the generally accepted project management practices in industry (such as construction, software, engineering and automotive). Emphasizes the process-based approach (inputs, tools and technology, and outputs). Includes the nine knowledge areas of project management. (Requirement: Must be enrolled in University Alliance.)

BUS 5840 FINANCIAL MANAGEMENT POLICY (3 credits). Introduces the three primary areas of concern to financial policy makers (capital budgeting, capital structure and working capital) and integrates this framework with a range of international financial concepts. Also explores the profound effect that foreign operations can have on financial statements.

BUS 5858 LEADING IN THE TECHNOLOGY-ORIENTED ENTERPRISE (3 credits). Examines the leadership challenges inherent in managing a technology-oriented enterprise. Presents various leadership approaches and describes their application in managing innovation and technology. Also addresses the role of leadership in system design and development in integrated product teams.

BUS 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

BUS 5990 INDEPENDENT STUDY (1-3 credits). Offers master's-level independent research or directed study under the direction of a member of the College of Business graduate faculty. May require deliverables such as a comprehensive paper. (Requirement: Program chair approval.)

CHEMICAL ENGINEERING

CHE 1091 NANO SCIENCE/NANOTECHNOLOGY LABORATORY (1 credit). Introduces science/engineering freshmen interested in careers in nanoscience/nanotechnology to techniques of nanomaterial fabrication by thin film deposition and chemical synthesis, and sample characterization techniques like atomic force and scanning tunneling microscopes. (Requirement: Freshman status or instructor approval.) Prerequisites: CHM 1101.

CHE 1101 INTRODUCTION TO CHEMICAL ENGINEERING 1 (2 credits). Introduces the chemical engineering profession. Discusses the role of an engineer as a problem solver dealing with multiple constraints. Covers process flowsheets, and piping and instrument training diagrams in Microsoft PowerPoint. (Requirement: Must be enrolled in the chemical engineering program.) (CL)

CHE 1102 INTRODUCTION TO CHEMICAL ENGINEERING 2 (1 credit). Applies the skills learned in CHE 1101 to a design problem presented in oral and written form. Presents statistics, plotting and spreadsheeting in Microsoft Excel, and curve fitting using Oakdale Engineering DataFit. (Requirement: Enrollment in chemical engineering degree program.) (CL)

CHE 2101 CHEMICAL PRO PROCESS PRINCIPLES 1 (5 credits). Basic principles and calculations in chemical engineering; application of physical and chemical principles to solutions of elementary engineering problems; steady- and unsteady-state material and energy balances; heats of formation, reaction and mixing; equilibrium process models. Prerequisites: CHM 1102, MTH 1002.

CHE 2102 CHEMICAL PROCESS PRINCIPLES 2 (3 credits). Basic principles and calculations in chemical engineering; application of chemical and physical principles to solutions of elementary engineering problems; steady- and unsteady-state material and energy balances; heats of formation, reaction and mixing; equilibrium process models. Prerequisites: CHE 2101.

CHE 3101 TRANSPORT PROCESSES (5 credits). Includes models for molecular-level transport mechanisms; bulk transport of momentum; pipe flow and pipeline design and optimization; rheologic behavior and viscometry; compressible flow; pressure and flow measurement; flow through fixed and fluidized beds; two-phase flow; pumping, boundary-layer theory. Prerequisites: CHE 2102. Corequisites: MTH 2201.

CHE 3103 HEAT TRANSFER PROCESSES (3 credits). Theory and applications of heat transfer; conduction, convection, radiation, condensation and evaporation; heat transfer in reaction vessels; humidification and water cooling; thermowell and heat exchanger design and optimization. Prerequisites: CHE 2102, MTH 2201.

CHE 3104 MASS TRANSFER PROCESSES (3 credits). Includes fundamental principles and applications of mass transfer and separation processes; diffusion and stagnant-layer approximation; two-film theory and surface renewal; flash and batch differential distillation; continuous binary and multicomponent rectification; and batch fractionation. Prerequisites: CHE 2102, MTH 2201.

CHE 3110 CHEMICAL ENGINEERING THERMODYNAMICS (3 credits). Studies the thermodynamics of chemical solutions and reactions. Includes ideal and non-ideal solutions, phase equilibria, single- and two-phase reaction equilibria. Prerequisites: CHE 2102.

CHE 3115 CHEMICAL ENGINEERING PROCESSES LAB 1 (2 credits). Includes experimental demonstration of theory covered in CHE 3101, CHE 3103 and CHE 3104. Prerequisites: CHE 3101. Corequisites: CHE 3103, CHE 3104.

CHE 3170 INTRODUCTION TO ENVIRONMENTAL ENGINEERING (3 credits). Introduces the field of environmental engineering that emphasizes the interrelationships among air, water and land pollution and the effect of ecological, economic and sociological constraints on the solution of environmental problems. (Requirement: Junior standing.)

CHE 3260 MATERIALS SCIENCE AND ENGINEERING (3 credits). Studies the relationships between materials processing, composition and structure, properties and performance. Includes electrical, mechanical and chemical properties of metals, ceramics, polymers, electronic materials and composites, as well as coating and protection materials. Prerequisites: CHM 1101, MTH 1002, PHY 1001.

CHE 3265 MATERIALS LABORATORY (1 credit). Complements CHE 3260. Illustrates materials processing, measurement and analysis of materials properties. Prerequisites: PHY 2091. Corequisites: CHE 3260.

CHE 4115 CHEMICAL ENGINEERING PROCESSES LAB 2 (2 credits). Continues CHE 3115. Demonstrates the theory covered in CHE 4112. Prerequisites: CHE 4131 and CHE 4151. Includes the design of experiments. Prerequisites: CHE 3115, CHE 4151. Corequisites: CHE 4122.

CHE 4122 CHEMICAL PROCESS CONTROL (4 credits). Studies dynamic modeling and control of chemical processes. Includes transfer function development, synthesis and tuning of feedback controllers, closed-loop stability analysis, frequency response and advanced control techniques. Prerequisites: CHE 3103.

CHE 4131 SEPARATION PROCESSES (3 credits). Fundamental principles and design of separation processes; batch and continuous flow, concurrent and countercurrent cascade; plate and packed towers; distillation, absorption, extraction; distillation economic design and optimization. Prerequisites: CHE 3103, CHE 3104.

CHE 4151 CHEMICAL ENGINEERING REACTOR DESIGN (3 credits). Introduces the modeling and design of chemical reactors including development of rate expressions for chemical reactions and analysis of experimental kinetic data. Emphasizes the modeling of ideal mixed-flow and plug-flow reactors. Prerequisites: CHE 3101.

CHE 4181 CHEMICAL ENGINEERING PLANT DESIGN 1 (2 credits). Technical and economic analyses leading to the design of complete facilities for chemical production. Investigates process flow sheet and process integration, along with material and energy balances; process equipment selection and plant layout; use of computer-aided design software for process analysis; cost analysis; and a design report. (Q) Prerequisites: CHE 3103. Corequisites: CHE 4131.

CHE 4182 CHEMICAL ENGINEERING PLANT DESIGN 2 (4 credits). Technical and economic analyses leading to the design of complete facilities for chemical production. Process flow sheets and process integration are investigated, along with material and energy balances; process equipment selection and plant layout; use of computer-aided design software for process analysis; cost analysis; and a design report. (Q) Prerequisites: CHE 4181.

CHE 4230 SPECIAL TOPICS IN SEPARATION PROCESSES AND UNIT OPERATIONS (3 credits). Continues CHE 4131. Emphasizes the area of separation processes and unit operations. May include adsorption, drying, gas cleaning, cyclones, chromatography, membranes; particle filtration, microlfiltration, ultrafiltration, reverse osmosis; heat tracing, mixing, cooling towers, gas compressors. Prerequisites: CHE 4131.

CHE 4240 ADVANCED COMPUTATIONAL METHODS FOR ENGINEERING APPLICATIONS (3 credits). Introduces numerical methods applied to engineering problems. Includes the use of selected mathematical software. (Requirement: Senior standing in engineering.)

CHE 4250 INTRODUCTION TO BIOCHEMICAL ENGINEERING (3 credits). Introduces modeling and design of biochemical reactors, including development of rate expressions for biochemical (metabolic) reactions and cell growth. Separation and purification of reaction products; system optimization. Prerequisites: CHE 4151.

CHE 4284 INDUSTRIAL SAFETY (3 credits). Safety considerations in design and operation of industrial and manufacturing facilities; toxicology, fire and explosion hazards; and OSHA standards. (Requirement: Senior standing in science or engineering.)
CHE 4285 DESIGN OF EXPERIMENTS (3 credits). Includes measurement and instrumentation, statistical design, data acquisition software, and design and construction of apparatus for chemical process experiments. (Requirement: Senior standing in chemical engineering.)

CHE 4288 PETROLEUM PROCESSING (3 credits). Focuses on the properties of crude oil and each of a refinery's products, the details of each refinery operation, and the effects of economic considerations on each refinery operation. (Requirement: Graduate standing or prerequisite course.) Prerequisites: CHE 4181.

CHE 4291 INDEPENDENT STUDY IN CHEMICAL ENGINEERING 1 (1-3 credits). Individual projects under the direction of faculty member in the chemical engineering program. Projects include a literature review, project proposal, process design or research, and written and oral reports. (Requirement: Department head approval or senior standing.)

CHE 4292 INDEPENDENT STUDY IN CHEMICAL ENGINEERING 2 (1-3 credits). Individual projects under the direction of faculty member in the chemical engineering program. Projects include a literature review, project proposal, process design or research, and written and oral reports. (Requirement: Department head approval or senior standing.) Prerequisites: CHE 4291.

CHE 4560 POLYMERIC MATERIALS (3 credits). General classes of polymers and their patterns of behavior; polymer synthesis and processing, polymer rheology and physical properties; and large-scale production problems. Prerequisites: CHE 3260.

CHE 4591 SPECIAL TOPICS IN CHEMICAL ENGINEERING (3 credits). Studies in depth a specialized area of chemical engineering. Subject matter depends on the expertise of the instructor. Topics announced prior to each offering. (Requirement: Instructor approval.)

CHE 4592 SPECIAL TOPICS IN CHEMICAL ENGINEERING (3 credits). Studies in depth a specialized area of chemical engineering. Subject matter depends on the expertise of the instructor. Topics announced prior to each offering. (Requirement: Instructor approval.)

CHE 5100 CHEMICAL ENGINEERING SEMINAR (0 credits). Weekly seminar topics on chemical engineering research and practice. Presentations are made by students, faculty and visitors.

CHE 5101 TRANSPORT PHENOMENA 1 (3 credits). Fundamental principles of momentum, heat and mass transfer, and their application to chemical systems. Includes derivation and analysis of the Navier-Stokes equations, energy equations and equations for mass transport; flows at small Reynolds number and Stokes Law; the method of matched asymptotic expansions, and boundary-layer theory. Also includes turbulence and multiphase phenomena.

CHE 5103 TRANSPORT PROCESSES IN BIOENGINEERING (3 credits). Studies mass, momentum and heat transfer within the human body, between the human body and the environment and in the design of devices and systems involved with transport processes in medical and clinical settings. (Requirement: Instructor approval.)

CHE 5110 EQUILIBRIUM THERMODYNAMICS (3 credits). Advanced topics in phase and chemical equilibria; relationships between equilibrium properties and molecular-based theories of solutions; and fugacity coefficients, activity coefficients, phase composition.

CHE 5120 PROCESS CONTROL (3 credits). Analysis, design, stability and sensitivity, and optimization and transient response of staged, continuous and batch operations. Emphasizes common mathematical and physical foundations, and automatic control systems.

CHE 5150 CHEMICAL REACTOR DESIGN (3 credits). Design of nonideal reactors; unsteady-state operation and stability analysis; multiphase reactors; and heat, mass and momentum transfer in reacting systems. (Requirement: Graduate standing in chemical engineering or prerequisite course.) Prerequisites: CHE 4151.

CHE 5210 SEPARATION PROCESSES (3 credits). Analysis of mass transfer in binary and multicomponent systems. Mathematical modeling of adsorption, extraction, reverse osmosis and other selected processes. (Requirement: Graduate standing in chemical engineering or prerequisite course.) Prerequisites: CHE 4104.

CHE 5291 SPECIAL TOPICS IN CHEMICAL ENGINEERING (3 credits). Studies in depth a specialized area of chemical engineering. Subject matter depends on the expertise of the instructor. Topics announced prior to registration. (Requirement: Instructor approval.)

CHE 5292 SPECIAL TOPICS IN CHEMICAL ENGINEERING (3 credits). Studies in depth a specialized area of chemical engineering. Subject matter depends on the expertise of the instructor. Topics announced prior to registration. (Requirement: Instructor approval.)

CHE 5567 NANOTECHNOLOGY (3 credits). Understanding and development of materials synthesis-structure-function relationships, emphasizing bulk and surface analytical techniques, catalyst synthesis methods, nanoporous materials, nanoparticles, nanocomposites, carbon nanotubes, nanowires, molecular self-assemblies and molecular recognition, biologically inspired materials and nanomedicine. (Requirement: Graduate standing or prerequisite course.) Prerequisites: CHE 3260 or CHE 3260.

CHE 5569 BIOMATERIALS AND TISSUE REGENERATION (3 credits). Introduces the principles of materials science and cell biology underlying the design of medical implants, artificial organs and matrices for tissue engineering. (Requirement: Prerequisite course or graduate standing or instructor approval.) Prerequisites: BIO 4010 or CHE 3260.

CHE 5571 PHYSICAL/CHEMICAL PROCESSES FOR WATER TREATMENT (3 credits). Modeling and design of physical and chemical processes for water treatment: coagulation, sedimentation, filtration, chemical precipitation, adsorption, ion exchange, reverse osmosis, chemical oxidation. (Requirement: Graduate standing or prerequisite course.) Prerequisites: CHE 3170.

CHE 5572 BIOLOGICAL PROCESSES FOR WATER TREATMENT (3 credits). Modeling and design of biological processes used for water and wastewater treatment: aerobic and anaerobic treatment, sludge digestion, nutrient removal and disinfection. (Requirement: Graduate standing or prerequisite course.) Prerequisites: CHE 3170.

CHE 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

CHE 5999 THESIS (3-6 credits). Individual research under the direction of a member of the graduate faculty on a selected topic. Six hours of thesis are required for the master's degree.

CHE 6899 FINAL SEMESTER DISSERTATION IN CHEMICAL ENGINEERING (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by the Office of Graduate Programs.)

CHE 6999 RESEARCH IN CHEMICAL ENGINEERING (1-6 credits). Independent research under the direction of a member of the graduate faculty prior to admission to doctoral candidacy. May be repeated for a maximum of nine credits. (Requirement: Doctoral standing.)

CHE 6999 DISSERTATION IN CHEMICAL ENGINEERING (3-6 credits). Preparation of the doctoral dissertation under the direction of the student's doctoral committee. (Requirement: Admission to candidacy for the doctoral degree.)

CHEMISTRY

CHM 1101 NANO SCIENCE/NANOTECHNOLOGY LABORATORY (1 credit). Introduces science/engineering freshmen interested in careers in nano-science research/nanotechnology to techniques of nanomaterial fabrication by thin film deposition and chemical synthesis, and sample characterization techniques like atomic force and scanning tunneling microscopes. (Requirement: Freshman status or instructor approval.) Prerequisites: CHM 1101.

CHM 1100 INTRODUCTION TO CHEMISTRY (3 credits). Introduces the basic concepts of modern chemistry. Provides an adequate chemistry background for the successful completion of CHM 1101.

CHM 1101 GENERAL CHEMISTRY 1 (4 credits). Covers fundamental principles of modern chemistry, including stoichiometry, properties of gases, liquids and solids, thermodynamics, atomic structure, properties of solutions and equilibrium. Includes lab component.

CHM 1102 GENERAL CHEMISTRY 2 (4 credits). Continues CHM 1101. Covers acids and bases, thermodynamics, electrochemistry, kinetics, descriptive chemistry of metals and nonmetals, coordination chemistry, nuclear chemistry. Introduces organic chemistry. Includes lab component. Prerequisites: CHM 1101.

CHM 2001 ORGANIC CHEMISTRY 1 (3 credits). Studies the fundamentals of structure and reaction mechanisms. Includes a review of bonding, preparations and reactions of organic substances. Prerequisites: CHM 1102.

CHM 2100 COMPUTER APPLICATIONS IN CHEMISTRY (2 credits). Covers the applications of computers in chemistry including computer fundamentals, data collection, analysis and presentation; and the visualization and prediction of molecular properties. For chemistry majors only. Noncredit for chemistry minor. (CL) Corequisites: CHM 2001.

CHM 3001 PHYSICAL CHEMISTRY I (3 credits). Includes fundamental principles of chemical phenomena; thermodynamics, equilibria and states of matter; and chemical kinetics. Prerequisites: CHM 2002, MTH 2001, PHY 2002.

CHM 3002 PHYSICAL CHEMISTRY II (3 credits). Continues CHM 3001. Includes chemical dynamics, quantum mechanics, atomic structures, chemical bonding and spectroscopy. Prerequisites: CHM 3001.

CHM 3011 PHYSICAL CHEMISTRY LABORATORY I (2 credits). Experiments illustrating the principles and techniques of physical chemistry studied in CHM 3001. Prerequisites: CHM 2011. Corequisites: CHM 3001.

CHM 3012 PHYSICAL CHEMISTRY LABORATORY II (2 credits). Experiments illustrating the principles and techniques of physical chemistry studied in CHM 3002. Prerequisites: CHM 3011. Corequisites: CHM 3002.

CHM 3301 ANALYTICAL CHEMISTRY I (5 credits). Focuses on the principles of modern analytical methods. Includes chemical separation and quantitative measurements, important equilibrium considerations and the treatment of experimental data. Prerequisites: CHM 1102.

CHM 3311 ANALYTICAL CHEMISTRY LABORATORY I (2 credits). Students conduct experiments in quantitative analytical techniques. Corequisites: CHM 3301.

CHM 3312 ANALYTICAL CHEMISTRY II: INSTRUMENTATION LABORATORY (2 credits). Quantitative and instrumental analysis techniques to accompany CHM 3302. Prerequisites: CHM 3311. Corequisites: CHM 3302, CHM 3302.

CHM 4001 INORGANIC CHEMISTRY I (3 credits). Covers basic theoretical concepts of inorganic chemistry as related to elementary structure and bonding, stressing representative elements; and donor-acceptor concepts, symmetry and group theory. Introduces transition metal chemistry. Prerequisites: CHM 3002.

CHM 4002 ADVANCED INORGANIC CHEMISTRY (3 credits). Includes structure and stability in coordination chemistry, spectroscopy of transition metal compounds; descriptive transition metal chemistry and reactions of metal compounds; and lanthanides and actinides. Introduces bioinorganic chemistry. Prerequisites: CHM 4001.

CHM 4111 ADVANCED PHYSICAL CHEMISTRY (3 credits). Selected topics in physical chemistry. Includes statistical mechanics and molecular modeling. Prerequisites: CHM 3002.

CHM 4222 ENVIRONMENTAL CHEMISTRY (3 credits). Applies basic principles of inorganic and organic chemistry to natural systems. Includes applications of terrestrial, aquatic and atmospheric chemistry. Prerequisites: CHM 2002.

CHM 4304 ADVANCED ANALYTICAL CHEMISTRY (3 credits). Includes electrode processes, thermodynamic and kinetic considerations, electrochemical methods and recent research articles. Prerequisites: CHM 3002, CHM 3302.

CHM 4500 ADVANCED ORGANIC CHEMISTRY (3 credits). Fundamentals of physical organic chemistry. Includes stereochemistry and structure, methods of mechanistic elucidation and selected mechanistic descriptions. Prerequisites: CHM 3002.

CHM 4550 POLYMER CHEMISTRY (3 credits). Introduces classes of polymers, their general patterns of behavior, polymer synthesis, physics of the solid state, polymer characterization, polymer rheology and polymer processing. Prerequisites: CHM 3002.

CHM 4611 ADVANCED LABORATORY TECHNIQUES 1 (2 credits). Studies advanced lab techniques. Emphasizes analytical and inorganic methodology. (Requirement: Senior standing in chemistry.)

CHM 4700 PHYSICAL BIOCHEMISTRY (1 credit). Emphasizes the physical aspects of biochemistry. Includes enzyme mechanism, kinetics, inhibition, thermodynamics and binding constraints. Explores molecular modeling of proteins and protein folding, highlighting chemical interactions. Also includes an examination of protein-DNA binding interactions. Prerequisites: CHM 3001. Corequisites: BIO 4010.

CHM 4800 UNDERGRADUATE RESEARCH 1 (3 credits). Senior research conducted under the direct supervision of a chemistry department faculty member. (Requirement: Department head approval.) Prerequisites: CHM 4800.

CHM 4900 CHEMISTRY SEMINAR (0 credits). Presents topics of current chemical research interest by students, faculty and distinguished visiting scientists. May be repeated.

CHM 4901 SENIOR RESEARCH SEMINAR (1 credit). Students present results of their senior research projects. (Q) Corequisites: CHM 4911.

CHM 4910 SENIOR THESIS IN CHEMISTRY I (3 credits). Research conducted under the direction of a chemistry department faculty member. Includes the preparation and department approval of a written senior thesis during the second semester of study. (Requirement: Senior standing in research chemistry option.) (Q)

CHM 4911 SENIOR THESIS IN CHEMISTRY II (3 credits). Research conducted under the direction of a chemistry department faculty member. Includes the preparation and department approval of a written senior thesis. (Requirement: Senior standing in research chemistry option.) (Q) Prerequisites: CHM 4910.

CHM 5002 ADVANCED INORGANIC CHEMISTRY (3 credits). Includes structure and stability in coordination chemistry, spectroscopy of transition metal compounds; descriptive transition metal chemistry and reactions of metal compounds; and lanthanides and actinides. Introduces bioinorganic chemistry.

CHM 5017 PHYSICAL METHODS IN INORGANIC CHEMISTRY (3 credits). Investigates the application of principles of structure and bonding in inorganic chemistry and the physical methods used to elucidate these principles, such as electronic and vibrational spectroscopy, diffraction techniques and magnetic resonance techniques. Corequisites: CHM 5002.

CHM 5018 SPECIAL TOPICS IN INORGANIC CHEMISTRY (3 credits). Covers advanced topics in inorganic chemistry. May include organometallic compounds, compounds of the less familiar elements, ligand field theory and advanced concepts in coordination chemistry. Prerequisites: CHM 5002.

CHM 5095 CHEMICAL RESEARCH PROJECTS (5 credits). Research projects under the direction of a member of the chemistry faculty in a selected area of chemistry.

CHM 5111 ADVANCED PHYSICAL CHEMISTRY (3 credits). Selected topics in physical chemistry. Includes statistical mechanics and molecular modeling.

CHM 5112 SPECIAL TOPICS IN PHYSICAL CHEMISTRY (3 credits). Selected topics in physical chemistry. Prerequisites: CHM 5111.

CHM 5114 APPLIED OPTICAL SPECTROSCOPY (3 credits). Covers applications of spectroscopy to chemistry and photochemistry. Prerequisites: CHM 5111.

CHM 5119 CHEMICAL DYNAMICS (3 credits). Experimental methods in chemical kinetics, rate laws and mechanisms, statistical and dynamic theories of reaction rates. Applies the principles and techniques of kinetics to a variety of systems.

CHM 5201 GREEN CHEMISTRY (3 credits). Extends and reinforces the basic knowledge introduced in undergraduate chemistry courses. Emphasizes chemistry for a sustainable environment, current clean chemical technology and waste minimization. Introduces new areas such as process design and solvent alternatives. Teaches recognition of the impact of green chemistry on daily life. Prerequisites: CHM 4001.

CHM 5304 ADVANCED ANALYTICAL CHEMISTRY (3 credits). Includes electrode processes, thermodynamic and kinetic considerations, electrochemical methods and recent research articles.

CHM 5305 SPECIAL TOPICS IN ANALYTICAL CHEMISTRY (3 credits). Includes advanced topics in analytical chemistry. Emphasizes separation techniques (chromatography) and electroanalytical methods (voltammetry).

CHM 5500 ADVANCED ORGANIC CHEMISTRY (3 credits). Fundamentals of physical organic chemistry. Includes stereochemistry and structure, methods of mechanistic elucidation and selected mechanistic descriptions.

CHM 5501 INTERPRETATION OF CHEMICAL SPECTRA (3 credits). Studies modern spectroscopic methods in organic chemistry. Includes the interpretation of 1- and 2-D spectra obtained by ultraviolet, infrared, proton and carbon-13 nuclear magnetic resonance and mass-spectral techniques.

CHM 5503 ORGANIC SYNTHESIS (3 credits). Studies reagents, their capabilities and limitations, and the use of reagents in the design of an organic synthesis. Prerequisites: CHM 5500.

CHM 5504 THEORETICAL ORGANIC CHEMISTRY (3 credits). Includes molecular-orbital treatments of organic molecules, including basic Huckel theory; aromaticity; reactions influenced by orbital symmetry.

CHM 5507 NATURAL PRODUCTS (3 credits). Surveys organic natural products, emphasizing marine organisms. Outlines major structural families and their sources. Includes the role of natural products in the environment, approaches to their analysis and structure elucidation, and biosynthesis of major classes of secondary metabolites.

CHM 5508 BIOORGANIC CHEMISTRY (3 credits). Includes structure-function relationships, the role of cofactors, origins of efficiency and selectivity, recognition phenomena and artificial enzymes. Prerequisites: CHM 5500.
CIS 5230 OPERATING SYSTEMS (3 credits). Explores the algorithms, protocols and mechanisms representing traditional single processor and multi-user operating systems. Emphasizes process management and synchronization, threads, memory management, virtual memory and process scheduling. May require a research paper and/or programming assignments. Required for CIS majors. Prerequisites: CIS 5200, CIS 5220.

CIS 5300 MODELING AND SIMULATION (3 credits). Introduces modeling and simulation (M&S). Includes verification, validation, construction and implementation for engineering and business, use of stochastics and probability distribution. Compares event-driven and continuous M&S to distributed M&S. Requires proficiency in a programming language (Java, C++, Perl) and a seminar project.

CIS 5510 LEGAL AND ETHICAL ASPECTS OF IS (3 credits). Investigates legal and ethical foundations of information systems. Discusses intellectual property, copyrights, patents, trademarks/domains, privacy, free speech, the Fifth Amendment, contracts and employment law. Requires a semester project on research and presentation of case law and precedents.

CIS 5400 TOPICS IN COMPUTER INFORMATION SYSTEMS (3 credits). Introduces software and system design techniques with a non-proprietary view of common design paradigms. Familiarizes users or integrators of systems with the phases of software development and some associated methodologies that may be encountered within their field. Prerequisites: CIS 5100.

CIS 5420 COMPUTER NETWORKS FOR INFORMATION SPECIALISTS 1 (3 credits). Provides a broad set of fundamental topics related to computer networks including network layers, topologies, technologies, services and methods useful for the typical information system specialists, TCP/IP, transmission protocols and client-server models. Introduces management and security of networks. Prerequisites: CIS 5100.

CIS 5420 COMPUTER NETWORKS FOR INFORMATION SPECIALISTS 2 (3 credits). Continues CIS 5410. Focuses on the more advanced topics of network security design and management including cryptography, LANs and WANs, and application and network layers.

CIS 5500 MODERN COMPUTER INFORMATION SYSTEMS (3 credits). Defines state-of-the-art information systems and how they support key corporate functions such as telecommunications, electronic commerce, intranets and enterprise-wide functionality in a group or organization. Also explores information technology at every level.

CIS 5510 COMPUTER INFORMATION SYSTEMS DESIGN (3 credits). Introduces software and system design techniques with a non-proprietary view of the architecture of complex data-driven systems for maximum simplicity and efficiency in a programming language (Java, C++, Perl) and a seminar project.

CIS 5600 ADVANCED INFORMATION STRUCUTURING TECHNIQUES (3 credits). Explores multilevel data-driven systems and techniques such as data warehousing, metadata and object-oriented databases. Integrates physical media and the architecture of complex data-driven systems for maximum simplicity and efficiency of design. Prerequisites: CIS 5100 or CIS 5500.

CIS 5890 INDEPENDENT STUDY IN COMPUTER INFORMATION SYSTEMS (1-3 credits). Individual projects under the direction of a member of the computer information systems faculty. May require deliverables such as a software system or product, or a comprehensive paper. May be repeated for a maximum of six credits. (Requirement: Instructor approval.)

COMMUNICATION

COM 0100 BASIC WRITING FOR ESL STUDENTS (3 credits). Provides instruction for ESL students who need additional practice writing sentences and paragraphs to develop the skills required in COM 1101. Credit may not be applied toward any Florida Tech degree. (Requirement: Prerequisite course or instructor approval.) Prerequisites: ESL 0345.

COM 0110 BASIC WRITING SKILLS (3 credits). Grammar and syntax, and their application to the writing process. Students learn correct spelling, master punctuation rules, construct accurate sentences and develop coherent paragraphs. Credit cannot be applied toward any Florida Tech degree. This course is required for students with low placement test scores.

COM 1101 COMPOSITION AND RHETORIC (3 credits). The first of two courses in college-level writing skills. Focuses on writing essays using various rhetorical modes: persuasion, description, comparison and analysis. Presents basic methods of library research, as well as the MLA documentation system. Students write one research paper and several essays. (Requirement: Passing grade on placement exam or prerequisite course.) Prerequisites: COM 0100 or COM 0110.

COM 1102 WRITING ABOUT LITERATURE (3 credits). The second of two courses in college-level writing skills. Focuses on reading and analyzing poems, plays and short works of fiction. Students write several essays and one research paper on literary topics. Prerequisites: COM 1101.

COM 1102 RESEARCH SOURCES AND SYSTEMS (1 credit). Acquaints students with a variety of library services, sources and systems. Emphasizes research strategies and tools useful in each student’s field of study, as well as the use of print, Internet and other electronic resources. Prerequisites: COM 1102.

COM 2150 CREATIVE WRITING (3 credits). Introduces the forms and techniques of writing creatively. Following a workshop structure, students present creative work for criticism by fellow students in a supportive environment. Emphasis on the best traditions of English literature. Prerequisites: COM 1102.

COM 2223 SCIENTIFIC AND TECHNICAL COMMUNICATION (3 credits). Practice in the technical and scientific writing style and format, including gathering and using data to prepare reports. Includes abstracts, reports, letters, technical descriptions, proposals and at least two oral presentations. (COM) Prerequisites: COM 1102.

COM 2224 BUSINESS AND PROFESSIONAL WRITING (3 credits). Designed for the future business professional. Includes business research methods, report writing, business correspondence and communication in the workplace. Covers analytical, informational, routine and special reports. (COM) Prerequisites: COM 1102.

COM 2225 WRITING FOR THE MEDIA (3 credits). Focuses on writing for a wide variety of media. Assists development and improvement of professional media writing skills. Covers the importance of the various writing approaches required for specific audiences and media organizations. Prerequisites: COM 1102.

COM 2370 SPEECH (3 credits). Introduces the concepts and techniques of effective public speaking and small group communication. Students prepare, organize and deliver different kinds of short speeches. (COM) Prerequisites: COM 1101.

COM 2425 INTRODUCTION TO COMMUNICATION (3 credits). Familiarizes students with the process of communication in interpersonal small group, organizational, mass and intercultural contexts. Introduces students to the study of communication and provides the background for understanding complex communication processes. (COM) Prerequisites: COM 1101.

COM 2501 INTRODUCTION TO VISUAL COMMUNICATION (3 credits). Introduces communication majors to the principles and techniques of visual communication. Emphasizes manipulating form to fit function as the student designs, implements and evaluates goal-oriented communication projects.

COM 2502 LAYOUT AND DESIGN (3 credits). Covers the principles, techniques and vocabulary required of designers of print communication projects, including a thorough understanding of the technology of offset printing. Emphasizes skills required in designing for print.

COM 2503 PHOTOGRAPHY (3 credits). Prepares students in the basics of commercial photography. Includes basic camera operation, use of light meters, film types and composition of pictures. Also includes lectures, demonstrations, examples and critique to students’ work. (COM) Prerequisites: COM 2223 or COM 2224.

COM 3045 INTERCULTURAL COMMUNICATION (3 credits). Examines the elements of communication among members of various cultures and subcultures both within the workplace and across national boundaries, especially as those elements affect business interactions. Presents strategies to improve intercultural communication in business settings. Prerequisites: COM 2223 or COM 2224.

COM 3070 PROFESSIONAL COMMUNICATION FOR EXECUTIVES (3 credits). Covers interpersonal and group communication in the professions for future executives. Students prepare and deliver a variety of career-related presentations. (COM)
COM 3085 SPECIAL TOPICS IN APPLIED COMMUNICATION (3 credits). Studies an emerging and significant issue within the field of communication. May include interpersonal persuasion, mass communication, media law or advances in publishing software. Topics announced prior to registration.

COM 3210 EDITING (3 credits). Includes grammatical terminology and concepts essential to editing, as well as copy editing techniques for hard copy and online materials. Also includes the study of varied editorial roles and responsibilities in general and technical editing, as well as major style-guide requirements. Prerequisites: COM 2223 or COM 2224.

COM 3231 WRITING ABOUT SCIENCE (3 credits). Designed for both communication and science majors. Covers the methods of scientific writing, including ways in which complex scientific topics can be conveyed to popular audiences. Also includes more traditional types of scientific writing such as scientific journal articles and proposals. (COM) Prerequisites: COM 2223 or COM 2224.

COM 3242 JOURNALISM (3 credits). Presents the methods and practice of news gathering, news writing and news editing. Focuses on style, clarity, accuracy and responsibility in handling news. Emphasizes enterprise, documentation and using multiple sources. Includes the use of standard reference materials and public records. Prerequisites: COM 2225.

COM 3250 SCRIPTWRITING (3 credits). Introduces writing script for film, emphasizing the importance of story, substance and structure. Includes documentary film writing for television and video. (COM) Prerequisites: COM 1102.

COM 3425 MASS COMMUNICATION (3 credits). Studies media influence from political, social and cultural perspectives. Examines theory and media effects in its influence on mass culture. Includes the historical development of mass media and the role of media in society. (H/SS) Prerequisites: COM 2425.

COM 3440 PUBLIC RELATIONS (3 credits). Studies communication principles and the practices of developing goodwill between a person, firm or institution and the public; and the means of gaining publicity and influencing people. Students analyze specific case studies and propose appropriate strategies and campaigns. Prerequisites: COM 2225.

COM 4000 THESIS PREPARATION (3 credits). Designed for students who are beginning to write a thesis or dissertation. Includes sentence and paragraph strategies, tone and style, documentation, editing and revising. Noncredit for communication majors. (Requirement: Demonstrated writing ability by examination.)

COM 4026 PUBLISHING AND THE INTERNET (3 credits). Covers current issues and applications of online and Internet publishing are covered including researching, designing and authoring effective online documents and presentations. Includes building an electronic portfolio. Prerequisites: COM 2223 or COM 2224, CSE 1301.

COM 4050 INDEPENDENT STUDY (3 credits). Allows senior communication majors the opportunity to pursue advanced study in a communication-related topic of interest. Topics approved and supervised by department faculty. Requires a formal paper. (Requirement: Program chair approval.)

COM 4085 COMMUNICATION TECHNOLOGY: ISSUES AND APPLICATIONS (1-3 credits). Designed for communication majors. Offers a study of a current topic (or topics) related to technology and communication. Course content varies from term to term.

COM 4090 COMMUNICATION INTERNSHIP (1-6 credits). Students work under the direct supervision of a business or industry professional and in coordination with the chair of the undergraduate communication program. Students with 99 or more semester hours and a 3.25 GPA in communication courses may apply. May be repeated for a maximum of six credits. (Requirement: Junior standing and instructor approval.)

COM 4220 WRITING PROPOSALS (3 credits). Focuses on the process of writing both solicited and unsolicited proposals. Encourages students to learn how to identify opportunities to submit proposals, plan and produce effective proposals, manage the proposal-writing process, deliver oral presentations based on their proposals, and follow up after submitting proposals. Prerequisites: COM 2223 or COM 2224.

COM 4424 ADVANCED BUSINESS AND PROFESSIONAL COMMUNICATION (3 credits). Topics vary and may include design and composition of corporate annual reports, instructional design for training seminars, scriptwriting for video production, advanced managerial report writing, proposal and grant writing, trade show promotion, and preparation and corporate image design. Prerequisites: COM 2223 or COM 2224.

COM 4430 RESEARCH METHODS AND MATERIALS IN TECHNICAL AND PROFESSIONAL COMMUNICATION (3 credits). In-depth examination of the methods of data collection and data analysis, and the research materials used in conducting research in communication. (Q) Prerequisites: BUS 2703, COM 2425.

COM 4440 STRATEGIC COMMUNICATION (3 credits). Examines integrated marketing communication theories and practices. Teaches strategic thinking across the functional areas, optimizing communication strategies and creatively developing and implementing tools and tactics. Covers how strategic marketing communication can be used for branding and to build a strong corporate image. Prerequisites: COM 3440.

COM 4777 SENIOR DESIGN PROJECT (3 credits). Requires development and presentation of a real-world team project. Includes a comprehensive plan from conceptualization, proposal writing, research and strategic planning through the design/writing of communication materials, plan execution and research evaluation. Culminates in a written report and oral presentation. (Requirement: Program chair approval.) Prerequisites: COM 4430.

COM 5002 WRITING FOR SPECIFIC PURPOSES (3 credits). Applies contemporary rhetorical strategies to the construction of written documents in a variety of discourse forms. Studies and generates professional-level materials, essays, manuals, proposals and reports to practice and develop expertise in specific genres.

COM 5003 PREPARING ACADEMIC DOCUMENTS (3 credits). Facilitates graduate students' production of conference and journal papers and initiating a thesis or dissertation. Employs modeling and group interaction to analyze advanced academic literature. Noncredit for communication majors.

COM 5050 THEORIES OF HUMAN COMMUNICATION (3 credits). Examines the full range of communication theories related to such areas as interpersonal communication, rhetoric, small-group communication, mass communication, linguistics, persuasion and multiculturalism.

COM 5102 RESEARCH METHODS AND MATERIALS IN TECHNICAL AND PROFESSIONAL COMMUNICATION (3 credits). In-depth examination of the methods of data collection and data analysis, and the research materials used in conducting research in the discipline of technical and professional communication. (Requirement: Program chair approval or nine graduate-level credits in the master's program.)

COM 5144 SCIENCE JOURNALISM (3 credits). Examines science writing for various audiences, techniques and rhetorical strategies. The main thrust is on writing, but also focuses on the function and role of the mass media in the coverage of science, medicine and technology, with attention to communication theory and constraints placed on coverage by the media.

COM 5225 ISSUES IN TECHNICAL AND VISUAL COMMUNICATION (3 credits). Focuses on how principles/elements of design and computer graphics integrate into creating brand identity. Emphasizes achieving in-depth knowledge about building strong brand identity, developing creative visual communication skills and working with a portfolio. Uses Adobe(R) InDesign(R), Photoshop(R) and Illustrator(R).

COM 5247 TECHNICAL EDITING (3 credits). Advanced theory and practice of editing technical, scientific and professional prose. Introduces the principles of copy and rewrite editing, techniques of production and essentials of preparing manuscripts for publication. Students develop and refine their professional skills via hands-on, decision-intensive editorial projects.

COM 5250 PUBLIC RELATIONS (3 credits). Studies communication principles and strategies applied to the development of goodwill between a firm or institution and its publics. Students analyze cases and develop a public relations campaign.

COM 5252 SEMINAR IN MARKETING COMMUNICATION (3 credits). Introduces students to the theory and practice of conducting effective marketing communication campaigns and the underlying processes involved in promotional messages. Focuses on current advertising and persuasive communication strategies that achieve desired communication outcomes.

COM 5251 CUSTOMER SERVICE AND COMMUNICATION (3 credits). Examines customer contact personnel-consumer interaction. Focuses on key variables that shape communication behaviors and impact customer satisfaction levels, diagnosis of problems within these relationships and prescription of behaviors that increase the communication effectiveness of both participants.

COM 5345 COMMUNICATING IN THE GLOBAL ECONOMY (3 credits). Examines the elements of cross-cultural communication by analyzing the interface between the organization and its cultural environment. Focuses on developing skills to improve communication across both language and cultural barriers in a diverse domestic workplace and an international business environment.

COM 5355 SEMINAR: SPECIAL TOPICS IN TECHNICAL AND PROFESSIONAL COMMUNICATION (3 credits). Investigates special topics and current issues in the discipline of technical, scientific and professional communication. Topics vary based on program needs and student/faculty interests. (Requirement: Program chair approval.)

COM 5400 INDEPENDENT STUDY (1-3 credits). Offers master's-level independent research or directed study under faculty supervision.

COM 5565 TECHNICAL AND PROFESSIONAL COMMUNICATION INTERNSHIP (1-6 credits). Students work under the direct supervision of a business or industry professional and in coordination with the chair of the graduate communication program. (Requirement: Program chair approval.)
COM 5777 TECHNICAL AND PROFESSIONAL COMMUNICATION DESIGN PROJECT (3-6 credits). An individual project of a practical or applied nature under the direction of a member of the graduate faculty. Satisfactory completion of either a design project or traditional research-based thesis (with committee approval) is necessary for completion of the master's program and awarding of the degree, unless the nonthesis option is chosen.

COM 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

COM 5999 THESIS (3-6 credits). Individual research work under the direction of a member of the graduate faculty. Satisfactory completion of either a traditional research-based thesis or design project (with committee approval) is necessary for the completion of the master's program and awarding of the degree, unless the nonthesis option is chosen.

COMPUTER ENGINEERING

See Electrical/Computer Engineering (ECE).

CONSTRUCTION MANAGEMENT

CON 1001 CAD APPLICATIONS AND CONSTRUCTION PLANS (3 credits). Introduces computer-aided design programs and techniques used in the construction process. Emphasizes developing the ability to read, prepare, interpret and apply CAD drawings to all aspects of the construction process.

CON 1004 CONSTRUCTION PLAN READING (2 credits). Introduces construction plans necessary to organize and supervise construction work. Covers interpretation of construction plans, symbols, scales and formats. Includes field trips and instruction in architectural, structural, mechanical, electrical and general construction details.

CON 2001 CONSTRUCTION METHODS AND OPERATIONS (3 credits). Introduces the operational processes for horizontal and vertical construction. Includes reading construction plans and building codes. Requires a team project, field trips and written reports on observations of project management and the use of equipment in the construction process. Prerequisites: CON 1004.

CON 2002 CONSTRUCTION MATERIALS LAB (1 credit). Focuses on testing the primary construction materials to understand their properties under various conditions and construction applications. Uses field trips to emphasize constraints realized under actual conditions. Covers English and metric units used in measuring construction materials. Prerequisites: CON 2000. Corequisites: CVE 3012.

CON 3000 CONSTRUCTION SOILS (3 credits). Introduces the nature of soils and how soil materials influence construction operations. Provides a geotechnical overview of soils in construction for the non-engineering major. Prerequisites: CVE 3012, CVE 3013.

CON 3001 BUILDING STRUCTURES AND STRUCTURAL SYSTEMS (3 credits). Covers essential formulae for the solution of structural problems and the solutions to common structural problems encountered in construction projects. Reviews structural engineering essentials and gives simple design solutions. Includes building and material codes, problems and illustrative examples. Prerequisites: CON 2000.

CON 3002 BUILDING MECHANICAL AND HVAC SYSTEMS (3 credits). Provides basic knowledge of building mechanical systems, and methods to estimate, install and verify the systems. Covers basic engineering principles of design associated with mechanical systems. Includes understanding of codes and the principles of design and materials used in the construction of plumbing, HVAC and transportation systems. Prerequisites: CON 1001, PHY 1999.

CON 4000 CONSTRUCTION CONTROLS: BUDGET, SCHEDULE AND QUALITY (3 credits). Covers the fundamentals of construction management. Emphasizes budgeting, scheduling and quality. Focuses on the principles of construction administration. Includes contract types, control of scope, cost, schedule, quality control and quality assurance, computerized automation and resolution of problems related to construction operations. Prerequisites: BUS 2212.

CON 4001 BUILDING ELECTRICAL AND ELECTRONIC SYSTEMS (3 credits). Applies the principles of code and the basic concepts in electrical and electronic theory, circuit design, materials, methods, safety and estimating to electrical, communications and power machinery systems. Provides a basic knowledge of systems operations with installation and quality verification methods. Prerequisites: CON 1001, PHY 1999.

CON 4002 CONSTRUCTION EQUIPMENT AND SAFETY (3 credits). Provides the fundamentals of heavy machine use and production estimating for construction operations. Examines major construction machine types. Includes safety procedures. Requires site visits and a term project on estimating equipment usage and operations. Prerequisites: CON 2001.

CON 4004 CONSTRUCTION SENIOR CAPSTONE PROJECT (3 credits). Includes development, analysis and feasibility study, and capstone project development and preparation of bidding and construction documentation for senior team project. Integrates the concepts and principles of construction management with a team exercise in construction operations. (Requirement: Senior standing.)

CON 4005 CONSTRUCTION SAFETY (3 credits). Provides an understanding of construction safety as federally mandated by Occupational Safety and Health Administration (OSHA) regulations. Includes interpretation and application of regulations, and development of safety plans. (Requirement: Senior standing.)

CON 4091 CONSTRUCTION PROJECT PROPOSAL (1 credit). Requires a construction management project proposal in tandem with a civil engineering civil design proposal. Involves teams from both areas developing construction estimates, schedules, field layout, logistics and safety plans required to execute a construction operation. (Requirement: Senior standing.) (Q)

CON 4092 CONSTRUCTION PROJECT (3 credits). Entails development of detailed construction management plans in tandem with civil engineering design projects proposed in CON 4091. Includes detailed project management plans, budgets, schedules, estimates and related documentation required to complete a full set of construction documents. (Requirement: Senior standing.) (Q) Prerequisites: CON 4091.

CRIMINAL JUSTICE

CRM 1000 INTRODUCTION TO CRIMINAL JUSTICE (3 credits). Introduces the criminal justice system and the various components. Includes crime trends, crime statistics, victimology, crime prevention, discretion and justice policy. (Requirement: Basic computer skills and enrollment in University Alliance.) (SS)

CRM 1246 INTRODUCTION TO LAW AND THE LEGAL SYSTEM (3 credits). Introduces the history, structures and processes of the U.S. legal system. Covers the basic legal concept. Includes due process, structure of the U.S. court system, civil and criminal procedure, and case law concepts. May be taken with CRM 1000. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CRM 1000.

CRM 2002 CORRECTIONAL SYSTEMS (3 credits). Overviews the origins, evolution, theory, practice and current problems of correctional systems. Includes the history of corrections in the U.S., short-term detention and jails, state and federal prisons, inmate topologies, capital punishment, correctional law, probation/parole and community corrections. (Requirement: Must be enrolled in University Alliance.) Prerequisites: COM 1101, CRM 1000.

CRM 2201 CRIMINOLOGY (3 credits). Examines the causes of criminal behavior. Also examines ethical issues, policy implication and research. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CON 1102, PSY 1411.

CRM 2203 DELINQUENCY AND PREVENTION (3 credits). Explores the nature and extent of the delinquency, the risk factors involved in delinquent behavior and victimization, and the juvenile justice system. Reviews and addresses prevention and diversion programs, and best practices. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CRM 2201.

CRM 2244 SUBSTANTIVE CRIMINAL LAW (3 credits). Discusses the creation and application of substantive criminal law. Includes the nature and origins of criminal law, substantive due process, elements of criminal liability, the doctrine of complicity, uncompleted crimes, defenses to criminal liability, and the elements of crimes against persons, habitation, property and public order. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CRM 1246.

CRM 2320 DRUGS, CRIME AND SOCIETY (3 credits). Examines the nature of commonly used psychoactive substances in relation to the human nervous system. Includes history and pattern of use, and the medical, legal, psychological and sociological consequences of abuse. Covers current practices and strategies for drug education and treatment. (Requirement: Must be enrolled in University Alliance.) (SS) Prerequisites: CRM 1000.

CRM 2702 CRIMINAL INVESTIGATIONS (3 credits). Explores the fundamental components of interviewing and investigations. Covers investigative practices in apprehending suspects and preparing criminal cases. Includes an in-depth examination of the science and art of criminal investigations, and gathering and analyzing evidence. Stresses overall management of major cases. (Requirement: Must be enrolled in University Alliance.) Prerequisites: COM 1101, CRM 1000.

*Course Descriptions continued...*
CSE 2410 INTRODUCTION TO SOFTWARE ENGINEERING (3 credits). Presents a basis for the integration of engineering rigor and software development. Students are shown a practical yet rigorous method of going from a problem concept to a software solution. Includes requirements specification, functional specification and coding techniques using information hiding and stepwise refinement. Prerequisites: CSE 2010 or ECE 2552.

CSE 2500 COMBINATORICS AND GRAPH THEORY (3 credits). Covers elementary and advanced counting techniques including permutations, combinations, multisets, inclusion-exclusion, generating functions and recurrence relations. Also presents topics in graph theory including graphs, trees, binary tree, graph traversals and network flow. Prerequisites: CSE 1001 or CSE 1502 or CSE 1503, CSE 1400 or MTH 2051.

CSE 3030 LEGAL, ETHICAL AND SOCIAL ISSUES IN COMPUTING (3 credits). Overviews legal, ethical and moral considerations for the computing professions. Includes the impact of legal concepts on society, the need for ethical considerations in software systems development, and the potential need for professional certification. Prerequisites: COM 2012, COM 2223 or COM 2224, CSE 1002 or CSE 1502 or CSE 1503 or ECE 2551.

CSE 3101 MACHINE AND ASSEMBLY LANGUAGE (3 credits). Presents a processor’s instruction set and programming structures available to the assembly language programmer. Includes relations between architecture, machine language and assembly language. Also includes assembly program interfaces with the operating system and high-level languages. Prerequisites: CSE 1002.

CSE 3120 COMPUTER ARCHITECTURE AND ASSEMBLY PROGRAMMING (3 credits). Introduces advanced computer architecture concepts. Includes microcode, execution pipelines, cache management, vector processors, parallel architectures and RISC processors. Explores the interfacing of assembly language programs with the operating system and high-level languages. Requires students to interface assembly with C and the Win32 API. Prerequisites: CSE 2050, CSE 2120.

CSE 3280 COMPUTER GRAPHICS PROGRAMMING (3 credits). Introduces computer graphics programming, the graphics pipeline, input and interaction using modern popular graphics APIs. Includes programming techniques for graphics primitives and transformations, viewing, lighting and shading, texturing and animation. Prerequisites: CSE 2010 or CSE 2502 or ECE 2552.

CSE 3411 SOFTWARE TESTING (1 credit). Explores functional (black box) methods for testing software systems, reporting problems effectively and planning testing projects. Students apply what they have learned throughout the course to a sample application that is currently available or under development. The choice of sample application changes from term to term. Prerequisites: CSE 1002, CSE 1400 or ECE 2552, ECE 3541.

CSE 3421 SOFTWARE DESIGN METHODS (3 credits). Explores methods for the design of software systems. Includes formal specifications of software behavior, object-oriented analysis/design and structured analysis/design. Prerequisites: CSE 2410.

CSE 4001 OPERATING SYSTEMS CONCEPTS (3 credits). Examines the design and implementation of operating systems. Includes process, storage and recovery management. Explores issues involved in moving from single-user systems to multitasking, multiprocessing and multiprocessor systems. Prerequisites: CSE 2050, ECE 2552, ECE 3541.

CSE 4020 DATABASE SYSTEMS (3 credits). Introduces the fundamentals of computer database systems. Includes a review of file structures, concepts of database design, functional units of a typical database system and application of database concepts to real-world problems. Prerequisites: CSE 2010 or CSE 2552.

CSE 4051 ADVANCED JAVA CONCEPTS (3 credits). Studies core Java and its major class libraries. Includes exception handling, packages, threads, internationalization, building graphical user interfaces, applets, networking, RMI, introspection (Java beans), cryptography and database connectivity. (Requirement: Instructor approval or prerequisite course.) Prerequisites: CSE 2010 or ECE 2552.

CSE 4081 INTRODUCTION TO ANALYSIS OF ALGORITHMS (3 credits). Covers time and space complexity of algorithms. Analyzes algorithms for sorting, searching, string processing and graph problems. Presents strategies such as divide-and-conquer, and greedy and dynamic programming as problem-solution techniques. Prerequisites: CSE 2010 or ECE 2552, ECE 3541.

CSE 4082 INTRODUCTION TO PARALLEL AND REAL-TIME ALGORITHMS (3 credits). Introduces parallel algorithm development, architecture for parallel computers, programming paradigms SIMD and MIMD for shared memory and distributed memory computers. Presents parallel algorithms for matrix computations, sorting and searching, and various numerical algorithms. Includes analysis of performance and scalability of parallel algorithms. Prerequisites: CSE 1502 or CSE 1503 or CSE 2050 or ECE 2552.

CSE 4083 FORMAL LANGUAGES AND AUTOMATA THEORY (3 credits). Presents abstract models of computers (finite automata, pushdown automata and Turing machines) and the language classes they recognize or generate (regular, context-free and recursively enumerable). Also presents applications of these models to compiler design, algorithms and complexity theory. Prerequisites: CSE 2010 or ECE 2552, ECE 3541.

CSE 4101 COMPUTER SCIENCE PROJECTS 1 (3 credits). A two-semester, senior-year project sequence that serves as the capstone for the project-intensive courses in computer science. Students team to implement a software project from conception to completion. (Requirement: Prerequisite course and senior standing in computer science; may not be taken concurrently.) (Q) Prerequisites: CSE 2010.

CSE 4102 COMPUTER SCIENCE PROJECTS 2 (3 credits). A two-semester senior-year project sequence that serves as the capstone for the project-intensive courses in computer science. Students team to implement a software project from conception to completion. (Requirement: Prerequisite course and senior standing in computer science; may not be taken concurrently.) (Q) Prerequisites: CSE 4101.

CSE 4201 SOFTWARE DEVELOPMENT PROJECTS 1 (1 credit). A two-semester, senior-year project sequence that serves as the capstone for the project-intensive courses in software engineering. Students team to implement a software project from conception to completion. (Requirement: Prerequisite course and senior standing in computer science; may not be taken concurrently.) (Q) Prerequisites: CSE 2010.

CSE 4202 SOFTWARE DEVELOPMENT PROJECTS 2 (4 credits). A two-semester, senior-year project sequence that serves as the capstone for the project-intensive courses in software engineering. Students team to implement a software project from conception to completion. (Requirement: Prerequisite course and senior standing in software engineering; may not be taken concurrently.) (Q) Prerequisites: CSE 4201.

CSE 4232 COMPUTER NETWORK PROGRAMMING (3 credits). Covers design and implementation of networked programs. Includes multi-threading, client/server programming, remote method invocation, exception handling, object serialization and shared-space programming. Prerequisites: CSE 2010 or CSE 2050 or ECE 2552.

CSE 4250 PROGRAMMING LANGUAGE CONCEPTS (3 credits). Surveys programming language concepts and design principles of programming paradigms (procedural, functional and logic). Includes a history of programming languages, data types supported, control structures and run-time management of dynamic structures. Prerequisites: CSE 2010 or ECE 2552.

CSE 4251 COMPILER THEORY (3 credits). Introduces formal languages, the construction of scanners and recursive descent, LL (1) and LR (1) parsers, intermediate forms, symbol tables, code generation and optimization of resultant code. Prerequisites: CSE 2010, CSE 3101 or ECE 2552, ECE 3541.

CSE 4257 GRAPHICAL USER INTERFACES (3 credits). Studies the theories and techniques of human-computer interaction and the design of direct manipulation graphical-user interfaces that support menus, buttons, sliders and other widgets for input, text and graphics for output. Students design, implement and evaluate a graphical-user interface. Prerequisites: CSE 2010 or ECE 2552.

CSE 4272 COMPUTER AND INFORMATION SECURITY (3 credits). Introduces the fundamentals of computer security. Includes vulnerability analysis, threat modeling and risk assessment, and techniques for asset protection. Discusses economic, legal and ethical issues in computer security. Focuses on a system-wide view of security and discusses trends in current literature. Prerequisites: CSE 2010 or ECE 2552.

CSE 4280 COMPUTER GRAPHICS ALGORITHMS (3 credits). Introduces computer graphics algorithms, software and hardware. Includes ray tracing, the graphics pipeline, transformations, texture mapping, shading models, sampling, global illumination, splines, animation and color models. Programming format in course provides sufficient background to write computer graphics applications. Prerequisites: CSE 2010 or ECE 2552.

CSE 4301 INTRODUCTION TO ARTIFICIAL INTELLIGENCE (3 credits). Surveys artificial intelligence, focusing on state-space and problem-reduction approaches to problem solving. Attention is given to the use of heuristics and their use in game-playing programs. Also discusses knowledge representation, automated reasoning and expert systems. Prerequisites: CSE 2010 or ECE 2552.

CSE 4303 SPEECH RECOGNITION THEORY (3 credits). Introduces students to techniques for speech recognition and the integration of ASR in programs, using general speech recognition tools. Covers techniques including feature extraction from speech data, neural networks, Gaussian mixtures, estimate and maximize, data clustering techniques, Viterbi, Hidden Markov Models (HMM), keyword spotting and beam search. Prerequisites: CSE 2050 or CSE 2552, CSE 2400 or MTH 2401.

CSE 4400 INDEPENDENT STUDY IN COMPUTER SCIENCE (1-3 credits). Projects individual under the direction of faculty members of the computer science or software engineering programs. May be repeated for a maximum of six credits. (Requirement: Instructor approval.)
CSE 4410 SOFTWARE PROJECT MANAGEMENT (3 credits). Introduces project management issues that are typical of large software projects. Includes project planning, estimation, modeling, measurement and assessment techniques. Surveys software project management tools. Overviews the key CMM process areas for project management. Prerequisites: CSE 2410.

CSE 4415 SOFTWARE TESTING 2 (3 credits). Explores structural (glass box) methods for testing software. Includes testing of variables in simultaneous and sequential combinations, application programmer interfaces, protocols, design by contract, coverage analysis, testability, diagnostics, asserters and other methods to expose errors, regression test frameworks, test-first programming. Prerequisites: CSE 2120, CSE 2410, CSE 3411.

CSE 4510 SPECIAL TOPICS IN COMPUTER SCIENCE (3 credits). Explores new and emerging topics within the various disciplines included in the field of computer science. Subject matter varies, depending on the instructor and other available resources. May be repeated for a maximum of nine credits, provided the topics change. (Requirement: Instructor approval.)

CSE 4520 SPECIAL TOPICS IN SOFTWARE ENGINEERING (3 credits). Provides instruction and experience in timely topics related to the production of quality-engineered software. May be repeated for a maximum of nine credits, provided the topics change. (Requirement: Instructor approval.)

CSE 4610 REQUIREMENTS ENGINEERING (3 credits). Studies in depth software requirements, engineering tools and techniques. Includes gathering user requirements, formal specification of system behavior, system interfaces, end user and system documentation and validation techniques. Emphasizes the end-user aspect of gathering and formalizing user expectations. Prerequisites: CSE 2410.

CSE 4621 SOFTWARE METRICS AND MODELING (3 credits). Examines common software metrics, axiomatic foundations of measurement, validity of measurements and measurement dysfunction, and some statistical and modeling approaches to help students make their software measurements meaningful. Prerequisites: CSE 2400, CSE 2410.

CSE 5210 FORMAL LANGUAGES AND AUTOMATA THEORY (3 credits). Presents abstract models of computers (finite automata, pushdown automata and Turing machines) and the language classes they recognize or generate (regular, context-free and recursively enumerable). Also presents applications in compiler design, algorithms and complexity theory. Prerequisites: CSE 2010.

CSE 5211 ANALYSIS OF ALGORITHMS (3 credits). Presents time and space complexity of computer algorithms. Includes algorithm classes, such as divide-and-conquer, greedy, dynamic programming and backtracking; techniques for solving recurrence equations; graph algorithms; searching and sorting; and deterministic and nondeterministic polynomial time problem classes. Prerequisites: CSE 2010 or CIS 5200, MTH 1002.

CSE 5231 COMPUTER NETWORKS (3 credits). Covers theory, design and analysis of computer communication systems. Includes TCP/IP, Internet, the World Wide Web, ISO-OSI network architecture, LANs (Ethernet, Fast Ethernet, Token Ring, Token Bus, etc.), FDDI, ATM, SONET, wireless communications, satellite networks, DNS, firewalls, network modeling and simulation. Prerequisites: CSE 2400, MTH 1002.

CSE 5232 NETWORK PROGRAMMING (3 credits). Covers design and implementation of programs that communicate with other programs across a computer network. Includes streams, server-side networking, client-side networking, multi-threading, exceptions and appropriate method invocation. Prerequisites: CSE 2010.

CSE 5233 COMPUTER FORENSICS (3 credits). Introduces concepts and techniques for the seizure and examination of digital evidence, along with the legal and ethical issues related to reporting on the results. Covers forensic tools and investigative procedures and includes a survey of current literature. Prerequisites: CSE 3101, CSE 4001.

CSE 5240 PARALLEL PROCESSING (3 credits). Investigates architectures for parallel computers and parallel algorithms for computational problems. Discusses performance evaluation metrics for the performance of parallel processing.

CSE 5241 DISTRIBUTED COMPUTING (3 credits). Studies the fundamental concepts in software systems that support and work in a distributed computing environment. Includes discussion of network communication mechanisms, distributed operating systems, services supporting distributed systems, distributed database systems, fault-tolerant systems and distributed algorithms. Prerequisites: CSE 4001.

CSE 5250 PROGRAMMING LANGUAGES (3 credits). Surveys programming language concepts including language features, implementation issues and language groups. Prerequisites: CIS 5200 or CSE 2010.

CSE 5251 COMPILER THEORY AND DESIGN (3 credits). Covers extensively the major topics of compiler design. Includes lexical analysis, scanner-generator tools, parsing, syntax-directed translation, static semantic checking, storage organizations, code generation and code optimization. Prerequisites: CSE 2010, CSE 3101.

CSE 5260 DATABASE SYSTEMS (3 credits). Introduces the analysis and design of typical database systems. Includes theoretical and practical aspects of designing database systems and a substantial project. Prerequisites: CIS 5200 or CSE 2010.

CSE 5272 COMPUTER AND INFORMATION SECURITY (3 credits). Examines concepts of modern computer security from a practical point of view. Includes vulnerability analysis, threat modeling and risk assessment, and techniques for asset protection. Discusses economic, legal and ethical issues in computer security. Emphasizes a system-wide view of security and includes a survey of current literature. Prerequisites: CIS 5200 or CSE 2010 or ECE 2552.

CSE 5280 COMPUTER GRAPHICS (3 credits). Presents the graphics pipeline for polygonal-based models. Includes mathematical concepts and data structures for graphics, coordinate systems, clipping, scan conversion, hidden-object detection, rendering, color models and graphics programming standards. Prerequisites: CSE 2010 or CIS 5200, MTH 1002.

CSE 5281 GRAPHICAL USER INTERFACES (3 credits). Studies the theories and techniques of human-computer interaction and the design of direct manipula-
tion graphical-user interfaces that support menus, buttons, sliders and other widgets for input, text and graphics for output. Students design, implement and evaluate a graphical-user interface.

CSE 5283 COMPUTER VISION (3 credits). Develops computational methods that model the capacity of the human vision system. Develops main concepts of computer vision research and its applications including robot navigation and interaction, autonomous exploration, traffic monitoring, biometrics identification and building 3-D images. Prerequisites: CSE 2010.

CSE 5290 ARTIFICIAL INTELLIGENCE (3 credits). Introduces the theoretical foundations of artificial intelligence, focusing on the areas of automated reasoning, search and heuristics. Introduces an AI language to implement concepts. Prerequisites: CSE 5200 or CSE 2010.

CSE 5400 TOPICS IN COMPUTER SCIENCE (3 credits). Current topics in computer science at the introductory graduate level. Topics vary and the course may be repeated for credit. (Requirement: Instructor approval.)

CSE 5401 INDEPENDENT STUDY IN COMPUTER SCIENCE (1-3 credits). Working closely with a faculty member, the student probes a subject in greater depth than is normally possible in a regular class. Requires a comprehensive paper or an applied research project. (Requirement: Instructor approval.)

CSE 5402 PROJECTS IN COMPUTER SCIENCE (1-3 credits). Working closely with a faculty member, the student develops a project in computer science to a greater depth than is normally possible in a regular class. Requires an applied research project. (Requirement: Instructor approval.)

CSE 5500 COMPUTER SCIENCE SEMINAR (0 credits). Presentations by faculty, graduate students and guest speakers on topics of current interest. May be repeated for credit.

CSE 5501 COMPUTER SCIENCES INTERNSHIP (0 credits). Industry-based internship experience under the supervision of a graduate faculty member, to provide professional experience for graduate students without prior experience in a practical information technology setting. (Requirement: At least nine graduate credit hours in computer sciences completed with at least a 3.0 GPA, and instructor approval.)

CSE 5610 COMPUTATIONAL COMPLEXITY (3 credits). Reviews problems, algorithmic Turing machines and computability. Studies Boolean and first-order logic, leading to undecidability results, and relations among complexity classes using reductions and completeness. Presents approximate and randomized algorithms. Prerequisites: CSE 5210, CSE 5211.

CSE 5615 COMPUTATIONAL MOLECULAR BIOLOGY (3 credits). Introduces important computational problems related to molecular biology. Includes motif finding, approximate sequence alignment, phylogeny construction and system biology. Requires knowledge in programming, discrete mathematics, data structures and algorithms. Does not require prerequisite biological sciences (BIO) course.

CSE 5630 ADVANCED OPERATING SYSTEMS (3 credits). Studies in detail the design and implementation of an operating system. Discusses various data structures and algorithms for process, memory and input/output device management. Investigates issues in distributed operating systems. Prerequisites: CSE 4001.

CSE 5636 NETWORK SECURITY (3 credits). Covers network intrusion detection, statistical anomaly detection and network perimeter security, and traffic monitoring including tools (Ethereal, TCPDUMP) used to analyze captured traffic streams. Overviews methods and tools used by hackers. Includes statistical anomaly detection and its role in detecting previously unseen attacks. Prerequisites: CSE 5231 or CIS 5235.

CSE 5650 ADVANCED PROGRAMMING LANGUAGES (3 credits). Presents theoretical topics in programming languages. Includes the lambda-calculus, functional programming, type interface and different approaches to the semantics of programming languages. Prerequisites: CSE 5250.

CSE 5660 DATABASE MANAGEMENT SYSTEMS (3 credits). Studies the internal components of a database management system (DBMS). Includes data organization, query optimization, transaction processing, concurrency control, logging and recovery, security and distributed DBMS. Prerequisites: CSE 5260.
CSE 5672 INTRODUCTION TO MALICIOUS MOBILE CODE (3 credits). Introduces the underlying concepts of viruses, Trojans and worms. Includes low-level virus structure, buffer overruns, viral epidemiology, virus/vorm countermeasures, and new and novel algorithms for virus detection. Overviews practical, safe computing. Requires a signed ethics statement. (Requirement: Prerequisite course or equivalent.) Prerequisites: CSE 3101.

CSE 5673 CRYPTOLOGY (3 credits). Focuses on making and breaking codes. Students learn how to crack enciphered messages without knowing the enciphering keys. Covers modern encryption and its application to digital signatures, digital cash, voting and cryptographic protocols. Prerequisites: CSE 2010.

CSE 5683 ADVANCED COMPUTER VISION (3 credits). Reviews recent technologies and trends of computer vision and image analysis. Research oriented for graduate computer science and engineering students. Prerequisites: CSE 5283.

CSE 5692 CONSTRAINT REASONING (3 credits). Covers foundations of constraint satisfaction and constraint-based reasoning; problem representation and characterization; consistency checking; heuristics and search; deterministic and stochastic solving methods; and applications such as scheduling, timetabling and temporal reasoning. (Recommended: CSE 5211 and CSE 5290.)

CSE 5693 MACHINE LEARNING (3 credits). Covers computational paradigms and techniques in learning and adaptation. Includes tree learning, rule learning, genetic algorithms, neural networks, case-based learning, Bayesian learning, analytical learning and reinforcement learning. Prerequisites: CSE 5290.

CSE 5780 PATTERN RECOGNITION IN BIOMEDICAL APPLICATIONS (3 credits). Introduces the fundamentals of statistical pattern recognition with examples from different biomedical application areas. Studies techniques for analyzing multidimensional data of various types and scales. Also covers algorithms for projections, and clustering and classification of data.

CSE 5800 ADVANCED TOPICS IN COMPUTER SCIENCE (3 credits). Current topics in computer science at the advanced graduate level. Topics vary and the course may be repeated for credit. (Requirement: Instructor approval.)

CSE 5801 INDEPENDENT RESEARCH IN COMPUTER SCIENCE (1-3 credits). Working closely with a faculty member, the student studies a research topic and writes a research paper. May be repeated for credit. (Requirement: Instructor approval.)

CSE 5802 RESEARCH PROJECTS IN COMPUTER SCIENCE (1-3 credits). The student works closely with a faculty member on a well-defined research project. May be repeated for credit. (Requirement: Instructor approval.)

CSE 5810 ADVANCED TOPICS IN COMPUTER SCIENCE THEORY (3 credits). Current topics in computer science theory at the graduate level. Topics vary and the course may be repeated for credit. Prerequisites: CSE 5210.

CSE 5860 ADVANCED TOPICS IN DATABASE SYSTEMS (3 credits). Current topics in database systems at the graduate level. Topics vary and the course may be repeated for credit. Prerequisites: CSE 5260.

CSE 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval of Office of Graduate Programs.)

CSE 5999 THESIS (3-6 credits). Research and preparation of a thesis under the direction of a member of the graduate faculty. A maximum of six credit hours may be applied toward the master of science degree requirements. (Requirement: Thesis supervisor approval.)

CSE 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

CSE 6990 RESEARCH IN COMPUTER SCIENCE (1-6 credits). Research conducted under the guidance of doctoral-level graduate faculty. Research may lead to preparation of a research proposal for dissertation work.

CSE 6999 DISSERTATION (3-12 credits). Research and preparation of the doctoral dissertation under the direction of the student’s doctoral committee.

CIVIL ENGINEERING

CVE 1000 INTRODUCTION TO CIVIL ENGINEERING (3 credits). Introduces the civil engineering sub-disciplines, including professional aspects and ethics. Uses hands-on group projects, group presentations, field trips and lectures. Includes exposure to structures, soils, transportation, hydrology, construction and the environment. Emphasizes technical communication and computer skills through all coursework.

CVE 1001 COMPUTER APPLICATIONS LAB (1 credit). Offers a broad background in computer applications, strongly emphasizing computer-aided design. Briefly discusses word processing, spreadsheet coding and PowerPoint(R) presentations. (CLI)

CVE 2001 RESEARCH IN CIVIL ENGINEERING (1 credit). Exposes students to faculty and research in the civil engineering department. Students work on a research project, prepare a report and present their findings. (Requirement: Department head and instructor approval.)

CVE 2002 RESEARCH IN CIVIL ENGINEERING (1 credit). Exposes students to faculty and research in the civil engineering department. Students work on a research project, prepare a report and present their findings. (Requirement: Department head and instructor approval.)

CVE 2003 RESEARCH IN CIVIL ENGINEERING (1 credit). Exposes students to faculty and research in the civil engineering department. Students work on a research project, prepare a report and present their findings. (Requirement: Department head and instructor approval.)

CVE 2080 CONSTRUCTION MEASUREMENTS (5 credits). Covers measurement of distances, elevations and angles; statistical errors and data adjustment; working with coordinates; topographic mapping and photogrammetry; global positioning systems (GPS); geographic information systems (GIS); and computer applications. Corequisites: CVE 1001.

CVE 3012 ENGINEERING MATERIALS (3 credits). Addresses stress-strain concepts and the relationship between internal structure and engineering properties as the basis for selection of materials. Materials studied include metals, concretes, timber, plastics and fiber composites.

CVE 3013 CIVIL ENGINEERING MATERIALS LAB (1 credit). Offers experiments in measurement techniques, materials testing and engineering applications. Prerequisites: PHY 2091. Corequisites: CVE 3012.

CVE 3015 STRUCTURAL ANALYSIS AND DESIGN (3 credits). Introduces modeling of structures; elastic analysis of statically determinate trusses, beams and frames; influence lines for determinate and indeterminate structures; deflections by the method of virtual work and other methods, analysis of indeterminate structures. Prerequisites: MAE 3083.

CVE 3020 SOILS AND FOUNDATIONS (3 credits). Studies the application of mechanics and hydraulics to the analysis of soils. Includes engineering geology, index properties, classification, compaction, effective stress, permeability, consolidation, and shear strength behavior of soil, as well as application to the design of foundations and retaining walls. Prerequisites: CVE 3030, MAE 3083.

CVE 3021 SOIL MECHANICS LAB (1 credit). Offers experiments in the sampling and testing of soil as an engineering material, to support topics in soil mechanics. Prerequisites: CVE 3020. Corequisites: MTH 2201.

CVE 3030 FLUID MECHANICS (3 credits). Includes pressure distribution in flowing and static fluids; integral expressions for conservation of mass and momentum; energy equation; similitude; and flow through conduits. Prerequisites: MAE 2081. Corequisites: MTH 2201.

CVE 3033 HYDRAULICS LAB (1 credit). Offers experiments in fundamental and applied fluid mechanics. Corequisites: CVE 3030.

CVE 3042 WATER AND WASTEWATER SYSTEMS FOR LAND DEVELOPMENT (3 credits). Covers the topics necessary to design potable water and domestic wastewater utility systems for land development projects. Includes the treatment and distribution of potable water and the collection and treatment of wastewater. Prerequisites: CHM 1101, CVE 1001. Corequisites: CVE 3030.

CVE 3052 MUNICIPAL WATER AND WASTEWATER SYSTEMS (3 credits). Covers the topics necessary to design and develop large-scale potable water and domestic wastewater treatment facilities. Includes site planning, physical, chemical and biological treatment; sludge processing and advanced treatment methods. Prerequisites: CHM 1101, CVE 1001.

CVE 4000 ENGINEERING ECONOMY AND PLANNING (3 credits). Presents economic evaluation of engineering alternatives. Includes time value of money, replacement alternatives, benefit/cost analysis, minimum cost analysis, depreciation, taxes and inflation. (Requirement: Junior standing.)

CVE 4013 STEEL STRUCTURES (5 credits). Studies the design of various elements of steel structures including tension members, beams, columns, beam-columns and connections. Introduces the AISC codes. Includes a design project. Prerequisites: CVE 3015.

CVE 4016 REINFORCED CONCRETE STRUCTURES (3 credits). Covers the mechanics of reinforced concrete and the design of reinforced concrete structures and structural elements. Introduces the design practices and procedures of the ACI code. Includes a design project. Prerequisites: CVE 3015.

CVE 4019 TIMBER STRUCTURES (3 credits). Covers the engineering properties of timber and their effect on design of timber structures. Studies the design of various elements of timber structures including tension members, beams, beam-columns, diaphragms and connections according to the NDS ASD specification. Includes a design project. Prerequisites: CVE 3015.
CVE 4020 FOUNDATION DESIGN (3 credits). Applies soil mechanics to foundation engineering, exploration techniques, foundation selection criteria, design and construction. Includes analysis and design of spread, mat and pile foundations, retaining wall design, drill piers; caissons; design using geotechnical fabrics; and slope stability. Prerequisites: CVE 3020.

CVE 4032 HYDRAULICS AND HYDROLOGY (3 credits). Includes steady flow in open channels, analysis of water surface profiles, channel design; measurement and estimation of components in the hydrologic cycle; unit hydrograph theory; statistical design methods; and hydrologic routing. Prerequisites: CVE 3040.

CVE 4035 URBAN HYDROLOGY (3 credits). Uses state-of-the-art water-quality and water-quantity computer models to predict the impact of urbanization on receiving waters. Students design a stormwater management system as a project. Prerequisites: CVE 4032.

CVE 4060 TRANSPORTATION ENGINEERING (3 credits). Modes of transportation are reviewed with emphasis on highways, including vehicle characteristics, geometric alignment, traffic analysis, queueing theories, signal timing, levels of service, traffic forecasting, pavement design and airport runway design and layout. Prerequisites: CVE 2080, CVE 3020.

CVE 4070 CONSTRUCTION ENGINEERING (3 credits). The fundamentals of construction engineering from a project management point of view. Focus on basics of construction project management principles including scope, quality control, planning and scheduling, cost engineering, risk management and loss prevention, local environment, information and communications, and stakeholder relations. (Requirement: Instructor approval or prerequisite course.) Prerequisites: CVE 3012, CVE 3013.

CVE 4073 CONSTRUCTION COST ENGINEERING (3 credits). The application of cost engineering principles and estimating within a project management framework in conjunction with scope definition, quality control, planning and scheduling, risk management and loss prevention techniques, local conditions, information and communication, and working relations with stakeholders. Prerequisites: CVE 4000.

CVE 4074 LEADING CONSTRUCTION OPERATIONS (3 credits). Covers specialized application of leadership fundamentals and team building to construction operations. Focuses on the basic principles of leadership including motivation, organizational dynamics, team formation and conflict resolution. Examines construction operations, work practices and ethics in the business environment. Corequisites: CVE 4070.

CVE 4090 SELECTED TOPICS IN CIVIL ENGINEERING (1-3 credits). Advanced topics in civil engineering in which a formal course does not exist at Florida Tech. Classes are conducted on a seminar basis with extensive student participation. Topics are chosen according to student interest and faculty expertise. May be repeated for a maximum of six credits. (Requirement: Department head approval.)

CVE 4091 DESIGN PROJECT 1 (1 credit). Develops a real world, peer reviewed, team design project. Students review alternatives and present a schedule and cost estimate. Professional and ethical issues are discussed. Project is completed in CVE 4092. Oral and written reports and a final team presentation are required. (Requirement: Senior standing.) (Q)

CVE 4092 DESIGN PROJECT 2 (3 credits). Proposal developed in CVE 4091 is completed. Oral and written reports and a final team oral presentation and report required. Also includes discussion of professional and ethical issues. (Requirement: Senior standing.) (Q) Prerequisites: CVE 4091.

CVE 4095 INDEPENDENT STUDY IN CIVIL ENGINEERING (3 credits). Independent study undertaken on a cooperative basis between a student and a member of the faculty. Typically, it is a short-term research-related project. May be repeated for a maximum of six credits. (Requirement: Department head approval.)

CVE 5014 ADVANCED STEEL DESIGN (3 credits). Behavior and design of steel structures with an emphasis on the AISC-LRFD specifications. Includes plate girders, continuous beams, complex connections, frames and composite construction. Prerequisites: CVE 4013.

CVE 5019 DESIGN OF TIMBER STRUCTURES (3 credits). Includes engineering properties of timber and their effects on design of timber structures. Studies the design of various elements of timber structures including tension members, beams, beam-columns, diaphragms and connections according to the NDS ASD specification. Includes a design project. Prerequisites: CVE 3015.

CVE 5020 GEOTECHNICAL ENGINEERING (3 credits). Advanced treatment of theory and principles of engineering soil mechanics as related to permeability, capillary, seepage forces, stress distribution, effective stress, consolidation and shear strength. Includes lab testing of soils for engineering properties. Prerequisites: CVE 3020.

CVE 5025 FOUNDATION DESIGN (3 credits). Explores the application of soil mechanics to foundation engineering, exploration techniques, foundation selection criteria, design and construction; analysis and design of spread, mat and pile foundations; retaining wall design; drilled piers; caissons; design using geotechnical fabrics; and slope stability. Prerequisites: CVE 3020.

CVE 5035 DESIGN CONCEPTS IN URBAN HYDROLOGY (3 credits). Uses state-of-the-art water-quality and water-quantity computer models to predict the impact of urbanization on receiving waters. Students design a stormwater management system as a project. Prerequisites: CVE 4032.

CVE 5037 NUMERICAL GROUNDWATER MODELING (3 credits). Studies the partial differential equations governing the motion of fluids and solute or contaminants in subsurface media; introduction to finite difference methods; description of the Galerkin finite element method. Uses state-of-the-art models, such as MODFLOW and SUTRA to solve real-world problems. Prerequisites: CVE 5039.

CVE 5039 GROUNDWATER HYDROLOGY AND CONTAMINANT TRANSPORT (3 credits). Covers energy concepts and governing equations in groundwater, estimation of aquifer properties, well and well-field design, saltwater intrusion, artificial recharge and modeling of contaminant transport in groundwater. Prerequisites: CVE 3030.

CVE 5050 DESIGN OF REMEDIATION SYSTEMS (3 credits). Covers the design process to clean up soil and groundwater contaminated with hazardous waste, including the design of contaminated groundwater capture systems, contaminant treatment, treated water disposal and air phase emission compliance.

CVE 5052 SOLID WASTE MANAGEMENT (3 credits). Regulation, generation, storage, treatment and disposal of solid wastes. Emphasizes the management of solid waste in an environment of changing regulations. (Requirement: Instructor approval.) Prerequisites: CVE 5050.

CVE 5060 HIGHWAY DESIGN (3 credits). Includes vehicle stopping sight distances, vertical and horizontal curve layout, cut and fill, analysis of level of service, queuing theory, flexible and rigid pavement designs, pavement overlay designs, nondestructive evaluation of pavements and pavement rehabilitation techniques. Prerequisites: CVE 3020.

CVE 5072 CONSTRUCTION CONTRACTS, LAWS AND SPECIFICATIONS (3 credits). Includes liability, real property and water rights; environmental and comprehensive planning laws and requirements; evidence, expert witness, claims, disputes and arbitration; contract specifications and drawings; resolution of differences; change orders and contract modifications; and case studies. Prerequisites: CVE 4070.

CVE 5073 CONSTRUCTION COST ENGINEERING (3 credits). Explores the application of cost engineering principles, and estimating within a project management framework in conjunction with scope definition, quality control, planning and scheduling, risk management and loss prevention techniques, local conditions, information and communication, and working relations with stakeholders. Prerequisites: CVE 4000.

CVE 5074 LEADING CONSTRUCTION OPERATIONS (3 credits). Fundamentals of leadership and team building to construction operations. Focuses on the basic principles of leadership including team formation, motivation, organizational dynamics and conflict resolution. Examines construction operations and characteristics, ethics in the business environment and its relationship to sound leadership principles. Prerequisites: CVE 4070.

CVE 5080 SELECTED TOPICS IN CIVIL ENGINEERING (1-3 credits). Advanced topics in civil engineering. Conducted on a seminar basis with extensive student participation. Topics chosen according to student interest. (Requirement: Instructor approval.)

CVE 5095 SPECIAL PROJECTS IN CIVIL ENGINEERING (1-3 credits). Special graduate study undertaken on a cooperative basis between a student and a member of the graduate faculty. The project may include a literature search in a selected area or the design and fabrication of research equipment. (Requirement: Department head approval.)

CVE 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

CVE 5999 THESIS RESEARCH (3-6 credits). Individual research under the direction of a graduate faculty member in a selected topic. (Requirement: Thesis adviser approval.)

CVE 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

CVE 6991 RESEARCH IN CIVIL ENGINEERING (1-3 credits). Research under the guidance of a member of the civil engineering faculty in a selected area of civil engineering. Repeatable as required.

CVE 6999 DISSERTATION (3-12 credits). Research and preparation of the doctoral dissertation.
COOPERATIVE EDUCATION

CWE 1001 COOPERATIVE EDUCATION 1 (1-3 credits). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Places students in private industry, business and public agencies. Requires specific academic standards and recommendation by the university to be eligible. Registration for three credits classifies student as full time, and credits may be applied as free elective credit in most programs. Also requires co-op coordinator approval of appropriate course prior to registration. Grades are pass/fail (P/F) only. (Requirement: Completion of 24 credit hours with at least a 2.5 GPA.)

CWE 2001 COOPERATIVE EDUCATION 2 (3 credits). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Places students in private industry, business and public agencies. Requires specific academic standards and recommendation by the university to be eligible. Registration for three credits classifies student as full time, and credits may be applied as free elective credit in most programs. Also requires co-op coordinator approval of appropriate course prior to registration. Grades are pass/fail (P/F) only. (Requirement: GPA of 2.5 or higher.) Prerequisites: CWE 1001.

CWE 3001 COOPERATIVE EDUCATION 3 (3 credits). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Places students in private industry, business and public agencies. Requires specific academic standards and recommendation by the university to be eligible. Registration for three credits classifies student as full time, and credits may be applied as free elective credit in most programs. Also requires co-op coordinator approval of appropriate course prior to registration. Grades are pass/fail (P/F) only. (Requirement: GPA of 2.5 or higher.) Prerequisites: CWE 2001.

CWE 3003 ENGINEERING COOPERATIVE EDUCATION (3 credits). Prepares students for professional careers. Students work on engineering projects including one or more of the following realistic constraints: economic, environmental, social, political, ethical, safety, security and manufacturing. Classifies students as full time. Can be used for a maximum of three credits of technical elective. (Requirements: Cumulative GPA of 2.5 or higher and instructor approval.) Prerequisites: CWE 3001.

CWE 4001 COOPERATIVE EDUCATION 4 (3 credits). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Places students in private industry, business and public agencies. Requires specific academic standards and recommendation by the university to be eligible. Registration for three credits classifies student as full time, and credits may be applied as free elective credit in most programs. Also requires co-op coordinator approval of appropriate course prior to registration. Grades are pass/fail (P/F) only. (Requirement: GPA of 2.5 or higher.) Prerequisites: CWE 3001.

CWE 5000 GRADUATE COOPERATIVE EDUCATION 0 (0 credits). Provides opportunities for graduate students who desire work experience related to their fields of study. No academic credit is awarded, but in other respects the preceding course descriptions all apply. (Requirement: Completion of nine graduate credit hours with at least a 3.0 GPA.)

EXTENDED STUDIES – ACCOUNTING

EAC 2211 PRINCIPLES OF ACCOUNTING 1 (3 credits). Introduces the financial environment, financial statements, the accounting cycle and the theoretical framework of accounting measurement, emphasizing mechanics, measurement theory and the economic environment. (Requirement: Must be enrolled in University Alliance.)

EAC 2212 PRINCIPLES OF ACCOUNTING 2 (3 credits). Continues EAC 2211. Emphasizes understanding the role of accounting in product costing, costing for quality, cost-justifying investment decisions, and performance evaluation and control of human behavior. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 2211.

EAC 3211 INTERMEDIATE ACCOUNTING 1 (3 credits). Studies the development of generally accepted accounting principles and valuation models in their application to financial statement presentations. Includes in-depth coverage of the preparation and use of accounting information based on current accounting standards of financial accounting. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 2211.

EAC 3212 INTERMEDIATE ACCOUNTING 2 (3 credits). Continues EAC 3211. Includes the valuation of liabilities and equities, revenue realization, accounting changes, income taxes, leases and financial statement disclosures. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 3211.

EAC 3214 ACCOUNTING INFORMATION SYSTEMS (3 credits). Covers the principles involved in establishing an accounting information system. Includes source documents, internal controls and the interfaces needed for managerial control of the business. Studies the integration of managerial accounting information needs with the design and implementation of systems. (Requirement: Third-year standing in University Alliance.) Prerequisites: EAC 2212.

EAC 3331 COST ACCOUNTING (3 credits). Studies relevant costs for managerial decision-making. Includes cost accounting fundamentals used in managerial control functions. (Requirement: Third-year standing in University Alliance.) Prerequisites: EAC 3332.

EAC 3332 ADVANCED COST ACCOUNTING (3 credits). Continues EAC 3331. Emphasizes measurements for decision-making and strategic planning. Includes cost analysis, capital budgeting, activity-based costing and other advanced cost accounting and managerial decision topics. Requires computer spreadsheet skills and a large quantity of outside reading. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 3331.

EAC 4401 ADVANCED ACCOUNTING (3 credits). Covers accounting principles for partnerships, mergers, acquisitions and consolidations. Includes the worksheet analysis of consolidation principles and introduces international accounting and fund accounting. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 3212.

EAC 4411 AUDITING (3 credits). Covers the principles and procedures of internal and public auditing. Includes the ethics, responsibilities, standards and reports of professional auditors. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 3212.

EAC 4412 ADVANCED AUDITING (3 credits). Applies auditing principles to audit situations. Introduces audit practice research and theory issues. Discusses financial auditing issues from the perspectives of management, accountants, internal auditors, audit committees and external auditors. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 4411.

EAC 4421 INDIVIDUAL FEDERAL INCOME TAXES (3 credits). Introduces federal taxes, emphasizing individual taxation. Includes the concepts of business income in various forms of business, the practical application of tax laws including tax return preparation, and simple tax research. Also introduces the various taxes beyond federal taxes. Requires computer skills. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 2212.

EAC 4422 CORPORATE FEDERAL INCOME TAXES (3 credits). Includes corporate taxation and the transfer of assets from one form of entity into a corporation. Covers allowable corporate expenses and deductions applicable to corporations. Also includes trust and estate tax, forming and running subchapter S corporations, and computer-generated partnership tax returns. (Requirement: Fourth-year standing in University Alliance.) Prerequisites: EAC 4421.

EBA 3321 ESSENTIAL BUSINESS SKILLS (3 credits). Explores the nature of the organization’s communications environments. Provides an understanding and practical experience about the various strategies and formats available when developing responsive communications in organizational situations. Includes oral and nonverbal communication and the composition of effective business documents. (Requirement: Must be enrolled in University Alliance.) Prerequisites: COM 1102.

EBA 3334 APPLIED DECISION METHODS FOR BUSINESS (3 credits). Uses quantitative techniques to aid in decision-making. Emphasizes problem identification and applies appropriate solution techniques for interpretation of results. Includes probability theory, decision-making under certainty, risk and uncertainty, inventory control, forecasting, PERT/CPM, utility theory and linear programming. Requires computer skills. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EAC 2212, EBA 3334, EMG 3225, EMG 3301, EMK 3601.

ELECTRICAL AND COMPUTER ENGINEERING

ECE 1551 DIGITAL LOGIC (4 credits). Studies the design of specialized processors. Introduces generalized processors. Includes state diagram, state assignment, transition diagram, combinational and sequential logic, programmable logic devices, dynamic registers, counters and memories. Provides extensive hands-on experience including logic simulation, hardware implementation, Web experience, circuit drawing and diagramming software.

ECE 1552 COMPUTER DESIGN (4 credits). Studies design of computer structures and embedded systems. Includes processor units, instruction set architecture, embedded systems organization and control, input/output organization, timer implementation, interrupts and basic computer organization and design. Also includes development of a working knowledge of the process through lab work, interfacing and programming. (CL) Prerequisites: ECE 1551.

ECE 2111 CIRCUIT THEORY 1 (4 credits). Includes concepts of transient and steady-state behavior of passive electrical circuits; techniques for circuit analysis including mesh and nodal analysis and equivalent circuits; first- and second-order circuits, superposition, Laplace transform techniques, and lab projects. Prerequisites: PHY 1001. Corequisites: MTH 2201.
ECE 2112 CIRCUIT THEORY 2 (4 credits). Continues ECE 2111. Includes phasors and steady-state response; AC power and two-port equivalent circuits and transfer functions; Fourier analysis transforms analysis, Laplace transforms; and lab projects. Prerequisites: ECE 2111, MTH 2201.

ECE 2551 SOFTWARE/HARDWARE DESIGN (3 credits). Studies software and hardware aspects of computer design and corresponding interdependencies. Includes use of C++ software development environments. Lab includes the application of high-level language concepts to digital signal processing. (CL) Prerequisites: ECE 1552.

ECE 2552 SOFTWARE/HARDWARE INTEGRATION (3 credits). Progresses from developing software/hardware modules to the vertical system of application use interfaces. Applies current software engineering techniques including data structures to integrate software and hardware using modern programming languages (e.g., C++). (CL) Prerequisites: ECE 2551.

ECE 3111 ELECTRONICS (4 credits). Introduces diodes, bipolar and field-effect transistors; analysis and design of semiconductor circuits; single and multistage amplifiers, design algorithms; operational amplifiers and oscillators. Includes lab projects. Prerequisites: ECE 2112.

ECE 3222 SIGNALS AND SYSTEMS (3 credits). Covers properties and applications of Fourier, Laplace and z-transforms to linear continuous and discrete systems, and introduces state-space description of systems. Prerequisites: ECE 2112.

ECE 3240 JUNIOR DESIGN (1 credit). Introduces the concepts, principles and methodology of collaborative electrical or computer engineering design through seminars, discussions and interaction with seniors completing their capstone design projects. Students form teams and study the feasibility of potential senior project selections. (Q) Prerequisites: CME 1101, ECE 3111.

ECE 3331 ELECTRON DEVICES (3 credits). Studies semiconductor materials and devices, electronic and holes, semiconductor diodes, bipolar transistors and field effect devices. Prerequisites: MTH 2201, PHY 2003.

ECE 3442 ELECTROMAGNETIC WAVES (3 credits). Addresses validity of circuit principles at high frequencies, electromagnetic wave on lines, impedance measurements using Smith chart, impedance matching techniques, waveguides and fiber-optical transmission systems, antennas and radiation waves, satellite data links and radar systems. Prerequisites: ECE 2112, MTH 2201, PHY 2002.

ECE 3541 DIGITAL STATE MACHINES (3 credits). Includes discrete digital signal processing. Prerequisites: ECE 1552, MTH 1002.

ECE 3551 MICROCOMPUTER SYSTEMS I (4 credits). Introduces software development for Embedded DSP hardware. Covers data sampling, quantization and digital representation, and data input, processing and output. Requires project research and development. Prerequisites: ECE 2111, ECE 2551.

ECE 3552 MICROCOMPUTER SYSTEMS II (4 credits). Introduces advanced concepts of software development for Embedded DSP hardware. Covers data coding and transmission, and video image processing. Requires project research and development. Prerequisites: ECE 3111, ECE 3551.

ECE 3553 MULTIFUNCTIONAL SYSTEMS (4 credits). Studies Internet and Web application development and software. Includes markup languages (XHTML, cascading style sheets, XML), client solutions (JavaScript), Web servers (IIS, Apache), databases (MySQL, Microsoft(R) Access), multimedia (audio, video, speech), dynamic Web pages (AJAX), and recent technologies. Prerequisites: ECE 2552.

ECE 4112 DIGITAL ELECTRONICS (3 credits). Covers the fundamentals of digital electronics. Emphasizes analytical reasoning and integrated circuits. Discusses logic families and large-scale circuits. Uses electronic design automation tools such as VHDL and Quartus 11. Prerequisites: ECE 3111, PHY 2003.

ECE 4221 COMMUNICATIONS SYSTEMS LABORATORY (3 credits). Includes review of signals in electrical communication; Fourier transform, noise and signal-to-noise ratio, power spectral density and autocorrelation function, linear (amplitude) modulation; exponential (angle) modulation; generation and detection of amplitude and angle modulated waves; sampling theory. Prerequisites: ECE 3222.

ECE 4224 COMMUNICATIONS AND CONTROL SYSTEMS LABORATORY (3 credits). Includes experiments on VCOs, tuned circuits, amplifiers, filters, balanced modulator, AM and FM generation and detection, sampling/aliasing, Control theory experiments (OP-AMP stability, cardiac pacemaker control, single axis linear excursion module, magnetic levitation system using MATLAB). Corequisites: ECE 4221.

ECE 4231 CONTROL SYSTEMS (3 credits). Covers analysis and design of linear time-invariant control systems. Includes electrical, mechanical, thermal, fluid and information handling elements encountered in control systems; modeling of systems of interconnected elements; transfer function (classical) and state space (modern) descriptions of control systems; signal flow graphs. Prerequisites: ECE 3222.

ECE 4241 SYSTEM DESIGN 1 (3 credits). Applies engineering design fundamen- tals to student design projects. Includes the study of the design process and related topics such as optimization techniques, reliability prediction, engineering economics, safety, aesthetics, ethics and social impact. Students carry out a project from conception through design, fabrication, testing and delivery. (Q) Prerequisites: ECE 3240.

ECE 4242 SYSTEM DESIGN 2 (3 credits). Applies engineering design fundamen- tals to student design projects. Includes the study of the design process and related topics such as optimization techniques, reliability prediction, engineering economics, safety, aesthetics, ethics and social impact. Students carry out a project from conception through design, fabrication, testing and delivery. (Requirement: Senior standing.) (Q) Prerequisites: ECE 4241.

ECE 4311 MICROELECTRONICS FABRICATION LABORATORY (3 credits). Students fabricate silicon p-channel transistors. Includes lectures on transistor processing and fabrication in the clean room. (Requirement: Senior standing or instructor approval.)

ECE 4332 ELECTROOPTIC DEVICES AND SYSTEMS (3 credits). Discusses the theory of operation of key photonic/fiber-optic devices used in a wide variety of electronic systems. Devices include lasers, light emitting diodes, photodetectors, CCD arrays, liquid crystal displays, optical fibers, etc. Explains the basic operation of various electrooptic systems. Prerequisites: ECE 3331. Corequisites: ECE 3442.

ECE 4333 LIGHTWAVE LABORATORY (3 credits). Lectures and introductory experiments in fiber-optics. Emphasizes typical components, and communication and sensor systems. (Requirement: Senior standing in ECE or instructor approval.) Prerequisites: PHY 2003.

ECE 4342 VIRTUAL INSTRUMENTATION LAB (3 credits). Lectures and experiments in programming, data acquisition and analysis of instrumentation using state-of-the-art and industry standard virtual instrumentation software and hardware tools. (Requirement: Senior standing in ECE or instructor approval.)

ECE 4451 COMPUTER ARCHITECTURE (3 credits). Covers instruction set design, processor and control unit design, handling of exceptions, ALU arithmetic and implementation, pipelining, pipeline hazards, memory hierarchy, cache memory types and I/O interface design. Prerequisites: CSE 3101 or ECE 3551.

ECE 4561 COMPUTER COMMUNICATIONS (3 credits). Theory, design and analysis of computer communication systems. Includes TCP/IP, Internet, the World Wide Web, ISO-OSI network architecture, LANs, wireless communications, satellite networks, UNIX network programming, network modeling and simulation. Prerequisites: ECE 2552.

ECE 4568 INTRODUCTION TO ELECTRICAL POWER SYSTEMS (3 credits). Comprehensively studies power system modeling and analysis. Includes power system representation, transmission lines, transformers, machines, the power-flow problem, operation and control, fault analysis and protection. Prerequisites: ECE 2112 or ECE 4991.

ECE 4800 INDEPENDENT STUDY (3 credits). Special projects are undertaken on a cooperative basis between a student and a member of the faculty. May include such work as a literature search in a given area of design and fabrication of equipment as a laboratory project.

ECE 4991 ELECTRIC AND ELECTRONIC CIRCUITS (3 credits). Studies circuit theory for nonelectrical engineering students; transient and steady-state behavior of passive linear lumped-parameter electric circuits; and AC circuit theory, network equations, network theorems, transfer functions and equivalent circuits. Prerequisites: MTH 2001, PHY 2002.

ECE 5111 RADIO FREQUENCY PROPAGATION (5 credits). Link budgets, free space antenna radiation patterns, multipath, fading, interference, propagation, antenna radiation patterns, multipath, fading, interference, reflection, refraction, rain attenuation, indoor propagation and RF safety. Considers applications to radar and terrestrial as well as satellite communication systems. Real world affects and impairment reduction methods. Prerequisites: ECE 4442, ECE 4221, MTH 2401.

ECE 5113 WIRELESS LOCAL AREA NETWORKS (3 credits). Provides the basics of wireless networking and WLAN technologies, the leading WLAN standards, WLAN configurations, WLAN implementation considerations, the benefits and applications of WLANs, WLAN trends and case studies.

ECE 5115 MODERN WIRELESS DESIGN CONCEPTS (3 credits). Key design criteria, techniques and component technologies of major components or sub-systems for wireless applications are treated, including transmitters and power amplifiers, satellite networks, modems, synthesizers, mixers, and duplexers. Prerequisites: ECE 3442, ECE 4221.

ECE 5117 MULTIMEDIA COMMUNICATIONS (3 credits). Introduces multimedia, continuous and discrete media, multimedia data compression, image coding and video coding basics, JPEG and MPEG standards, multimedia networking, multimedia over Internet, multimedia over wireless networks. (Requirement: Graduate standing.) Prerequisites: ECE 3222.
ECE 5118 WIRELESS SENSOR NETWORKS (3 credits). Pervasive networks and network embedded systems, power-aware issues in wireless sensor networks, collaborative signal and information processing, routing and MAC protocols in sensor networks, clustering and coordination in sensor networks, sensor networks applications. (Requirement: Graduate standing.)

ECE 5201 LINEAR SYSTEMS 1 (3 credits). Studies linear spaces, linear operators and matrix calculus; mathematical description of linear dynamic systems, the relation between state variable descriptions and system transfer functions; controllability and observability of systems, realization of rational transfer function matrices and introduces nonlinear analysis. Prerequisites: ECE 4231 or MTH 2201.

ECE 5221 PERSONAL COMMUNICATION SYSTEMS (3 credits). Overviews the principles of operation, general architectures, access methods, modulation schemes and performance of cellular and personal communications systems. Presents design criteria for modern systems and use of real world tools to demonstrate design concepts. Prerequisites: ECE 4221.

ECE 5223 DIGITAL COMMUNICATIONS (3 credits). Covers physical media, digital modulation, detection, intersymbol interference, adaptive equalization, spectrum control, error control and synchronization. Prerequisites: ECE 4221, MTH 5425.

ECE 5233 SATELLITE COMMUNICATIONS (3 credits). A comprehensive study of the systems aspects of satellite communications, with emphasis on digital communications. Includes an analysis of AWGN channels, performance degradation caused by hand limiting, nonlinearities, phase noise, etc. Presents a survey of existing operational satellite systems. Prerequisites: ECE 4221.

ECE 5234 COMMUNICATION THEORY (3 credits). Covers theory of signal spaces; dimensionality, distortion; optimum methods of statistical detection and estimation; characteristics of noise; introduction to information theory, including channel capacity, source coding and channel coding; and time-bandwidth limitations and rate-distortion theory. Prerequisites: ECE 4221.

ECE 5238 ERROR CONTROL CODING (3 credits). Introduces algebra, linear block codes, Galois fields, cyclic codes, circuits for cyclic codes, BCH codes, spectral techniques for encoding and decoding, and convolutional codes.

ECE 5243 DIGITAL CONTROL SYSTEMS (3 credits). Analyzes and designs digital control systems using state-variable techniques and time-domain analysis; sampling, z-transform analysis and the frequency domain; and controllability and observability. Prerequisites: ECE 5201.

ECE 5244 DIGITAL SIGNAL PROCESSING 1 (3 credits). Describes discrete-time signals in the time and frequency domains; z-transform, discrete Fourier transform, FFT algorithms; introduction to classical digital filter design techniques; and filter banks.

ECE 5248 ADVANCED FILTERING (3 credits). Bayesian estimation theory; filtering, smoothing and prediction for linear and nonlinear systems, Gaussian and non-Gaussian models, and for known or unknown models; fast algorithms for filter design and implementation; linear, nonlinear and adaptive filters; applications. Prerequisites: ECE 5201, MTH 5425.

ECE 5251 RADAR SYSTEMS (3 credits). Covers characteristics of radar, predic-
tion of range and performance, types of pulse (pulse-Doppler, MTI, CW, etc.); modern radar technologies, phased-array systems, clutter, jamming, and introduces signal processing methods.

ECE 5256 DIGITAL IMAGE PROCESSING (3 credits). Investigates image processing by machine for such purposes as robotics, biomedicine, remote sensing and photogrammetry. Includes image enhancement and analysis, transform techniques including wavelet transform, feature extraction, segmentation, compression and morphology.

ECE 5258 PATTERN RECOGNITION (3 credits). Includes Bayes decision theory; optimal pattern recognition algorithms; feature extraction criteria and algo-
rithms, adaptive pattern recognition, supervised and unsupervised learning, applica-
tions to failure detection, and target, image and speech recognition. Prerequisites: ECE 5201, MTH 5425.

ECE 5259 MEDICAL IMAGING (3 credits). Presents the interdisciplinary prin-
ciples of medical imaging techniques such as diagnostic ultrasound, radiography, x-ray computer tomography (CT) and magnetic resonance imaging (MRI). Includes the physical principles, noise modeling and signal processing for each imaging modality. Prerequisites: MTH 2201, MTH 2401.

ECE 5268 THEORY AND APPLICATIONS OF NEURAL NETWORKS (3 credits). Includes learning in a single neuron, single- and multi-layer perceptrons, recurrent network, and distinct optimization methods of statistical detection and estimation; characteristics of noise; introduction to information theory, including channel capacity, source coding and channel coding; and time-bandwidth limitations and rate-distortion theory. Prerequisites: ECE 5233, ECE 5311.

ECE 5270 SPECIAL TOPICS IN SYSTEMS (3 credits). Topics of current interest in the technical literature on systems.

ECE 5301 SEMICONDUCTOR DEVICE THEORY (3 credits). Reviews basic semiconductor physics and band theory; development of detailed theory of p-n junctions; Schottky barrier diodes, bipolar transistors and heterojunctions. Introduction of field effect transistor theory include JFETs, MOSFETs and VLSI technologies. Prerequisites: ECE 3331.

ECE 5311 MICROELECTRONICS FABRICATION LAB (3 credits). Hands-on fabrication and testing of integrated circuits including oxidation, diffusion, photolitho-
tography, metallization and etching. Students perform all process steps required, beginning with polished silicon wafers and ending with completed integrated circuits that are tested and characterized.

ECE 5331 IC COMPUTER-AIDED ANALYSIS (3 credits). Presents the funda-
mentals of CAD techniques for the IC design verification including the hierarchy of simulation tools. Emphasizes the mathematical and numerical techniques used for circuit level simulation. Prerequisites: ECE 5351, ECE 3311.

ECE 5333 ANALOG IC DESIGN (3 credits). Design of analog integrated circuits using bipolar, CMOS and related technologies. Includes bipolar and MOS DC/AC models, fundamental single-stage amplifier topologies, current sources and bias networks, power amplifier topologies and opamp circuit design. Prerequisites: ECE 3111, ECE 3331.

ECE 5350 OPTICAL ELECTRONICS (3 credits). Principles of stimulated emission; electromagnetic field modes in optical resonators; ray tracing techniques in laser resonators and beam delivery systems; Gaussian beam profiles and laser linewidths; noise in lasers and optical amplifiers; excitation methods; mode locking and Q-switching techniques; picosecond and femtosecond laser pulse generation; optical bistable devices.

ECE 5351 FIBER-OPTIC COMMUNICATION SYSTEMS (3 credits). Includes optical fiber links, comparison between optical and electronic communication links; data encoding and bit error rates; properties of single, multimode and polarization preserving optical fibers, including attenuation, pulse spreading, bandwidth and maximum bit rate; transmitter and receiver design considerations, link design.

ECE 5352 FIBER-OPTIC SENSOR SYSTEMS (3 credits). Studies fundamental theory and state-of-the-art fiber-optic sensor systems; comparison with conventional sensors for strain, temperature, electric and magnetic fields; specialized fiber-optic components; use of multimode, singlemode, polarization preserving and high birefringence optical fibers, interferometric- and intensity-based sensor architectures.

ECE 5354 ACOUSTOOPTIC AND ELECTROOPTIC DEVICES (3 credits). Theory of operation and system applications, including optical wave propagation through an anisotropic medium, electrooptic and acoustooptic effects; Raman-Nath and Bragg regimes of operation, acoustooptic and electrooptic material properties and selection criteria, operation of laser modulators, deflectors and frequency.

ECE 5355 ELECTROOPTICS LAB (3 credits). Lectures and experiments in photonics with emphasis on fiber optics, and design, fabrication and testing of com-
munications sensor systems.

ECE 5356 OPTICAL WAVEGUIDES AND DEVICES (3 credits). Applications of Maxwell’s equations and time-harmonic electromagnetic waves to fiber-optical waveguides; ray trajectories; electromagnetic fields in single- and multimode fibers; attenuation and dispersion mechanisms; inelastic scattering and nonlinear propaga-
tion; erbium-doped ultra-broadband optical traveling wave amplifiers.

ECE 5370 SPECIAL TOPICS IN PHOTONICS (3 credits). Topics of current interest in the technical literature on photonics.

ECE 5371 SPECIAL TOPICS IN MICROELECTRONICS (3 credits). Topics of current interest in the technical literature on microelectronics.

ECE 5410 ELECTRODYNAMICS 1 (3 credits). Electrostatics and boundary value problems; solutions of Laplace’s and Poisson’s equations in Cartesian, spherical and cylindrical coordinates; electrostatic multipole fields; fields in dielectrics; magneto-
statics; Maxwell’s equations; plane electromagnetic waves; guided waves and resonant cavities; antennas and vector diffraction.

ECE 5418 FIELD THEORY OF GUIDED WAVES 1 (3 credits). Maxwell’s equations; time-harmonic electromagnetic waves; vector and scalar wave equa-
tions, analysis of electromagnetic field modes in rectangular and circular cylindrical waveguides using vector potential methods; phase and group velocity; transverse wave impedance; propagating waves and evanescent fields; resonant cavities.

ECE 5419 FIELD THEORY OF GUIDED WAVES 2 (3 credits). Hybrid field modes, longitudinal section electric (LSE) and magnetic (LSM) modes in partially filled waveguides; inhomogeneous boundary conditions and transcendental eigenvalue equations; dielectric waveguides and resonators; stripline and microstrip lines; ridged waveguides, spherical transmission lines and cavities.

ECE 5425 ANTENNAS 1 (3 credits). Reviews basic electromagnetic principles; radiation from infinitesimal electric and magnetic dipoles; antenna directivity and gain; the one-way and radar range equations; array theory and phased arrays; and wire antennas and broadband antennas.

ECE 5426 ANTENNAS 2 (3 credits). Equivalence principles; vector diffraction and its application to horn and reflector antennas; antenna pattern synthesis.
ECE 5431 COMPUTATIONAL ELECTROMAGNETICS (3 credits). Finite difference solutions of differential equations; moment method solutions of integral equations; FDTD, FEM and GTD in electrodynamics.

ECE 5470 SPECIAL TOPICS IN ELECTROMAGNETICS (3 credits). Topics of current interest in the technical literature on electromagnetics. (Requirement: Instructor approval.)

ECE 5525 SPEECH PROCESSING (3 credits). Fundamentals of digital speech processing, digital models for speech signals, acoustic theory of speech production, speech perception, speech analysis, homomorphic speech processing, coding of speech signals, linear predictive coding, methods for speech recognition and digital speech processing for man-machine communication by voice. Prerequisites: ECE 3222.

ECE 5526 SPEECH RECOGNITION (3 credits). Basic approaches in speech recognition, dynamic time warping, hidden Markov models and neural networks. Prerequisites: ECE 5525.

ECE 5527 SEARCH AND Decoding in SPEECH RECOGNITION (3 credits). Issues with searching for best answers from recognition hypotheses generated by the recognizer, including lattice networks, dictionaries, language modeling and its use in speech recognition, network search algorithms, word networks and standard lattice format, finite state grammars, Bi-grams, N-grams and other language modeling techniques. Prerequisites: ECE 5226.

ECE 5528 ACOUSTICS OF AMERICAN ENGLISH SPEECH (3 credits). American English phonemes, speech and sound analysis, static properties of speech sounds; consonants, vowels, obstruent and vowel transitions, consonantal sonorant and vowels, consonant interactions; and acoustic variability.

ECE 5534 COMPUTER NETWORKS 1 (3 credits). Theory, design and analysis of computer communications systems. Topics include TCP/IP, Internet, the World Wide Web, ISO-OSI network architecture, LANs (Ethernet, Fast Ethernet, Token Ring, Token Bus, etc.), ATM, SONET, wireless communications, satellite networks, network modeling and simulation. Prerequisites: ECE 4561.

ECE 5555 WAVELET TRANSFORMS FOR IMAGE PROCESSING (3 credits). Includes wavelet transforms, multiresolution analysis and wavelet design. Discusses applications to signal compression, denoising and feature detection. Prerequisites: ECE 5201 or ECE 5245.

ECE 5570 SPECIAL TOPICS IN COMPUTER ENGINEERING (3 credits). State-of-the-art topics in the current literature in computer engineering. Requirement: Instructor approval.

ECE 5583 POWER SYSTEMS OPERATION AND CONTROL (3 credits). An in-depth analysis of computer methods for power systems. Topics include system matrices, power flow, load flow, power system stability and economic dispatch with programming considerations for each topic. Prerequisites: ECE 5245.

ECE 5584 POWER SYSTEM RELIABILITY AND PLANNING (3 credits). An appraisal of modern techniques for assessing the adequacy of power systems and for evaluating expansion alternatives. Topics include reliability theory, the space-state method, assessment techniques for various system topologies and determination of feasible expansion. Prerequisites: ECE 4681.

ECE 5589 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

ECE 5961 INTERNSHIP IN ELECTRICAL AND COMPUTER ENGINEERING (1 credit). Provides an opportunity to gain practical experience in industries related to electrical or computer engineering. Students are placed in an industrial environment under the supervision of a practicing engineer. (Requirement: Graduate standing.)

ECE 5999 THESIS IN ELECTRICAL OR COMPUTER ENGINEERING (3-6 credits). Individual work under the direction of a member or members of the graduate faculty on a selected topic.

ECE 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

ECE 6999 RESEARCH AND DISSERTATION IN ELECTRICAL OR COMPUTER ENGINEERING (3-12 credits). Taken by appointment with members of the electrical engineering graduate faculty. (Requirement: Department head approval.)

SCIENCE AND MATHEMATICS EDUCATION

EDS 1005 INTRODUCTION TO EDUCATION (3 credits). Deepens understanding of education with a focus on schools, students, teachers, foundations and the teaching profession. Includes current education issues related to the philosophy, history and politics of education, particularly in the United States. Introduces students to the 12 Florida Educator Accomplished Practices.

EDS 1021 GENERAL PHYSICAL SCIENCE (3 credits). Introduces the concepts and applications of the physical sciences for non-science majors. Includes the processes and history of science, thermodynamics, electricity, waves, chemical reactions, nuclear energy, relativity and the formation of the Earth and the universe. (Requirement: Must be enrolled in University Allianc.)

EDS 1031 SURVEY OF SCIENCE 1: PHYSICAL SCIENCE (3 credits). Includes a survey of physics, chemistry and astronomy including motion, forces, energy, electricity, waves, the metric system and the application of science and technology to everyday living.

EDS 1054 SURVEY OF SCIENCE 2: LIFE SCIENCE (3 credits). Facilitates student understanding of life, phenomena and processes of cellular and human biology, and to address selected current topics in ecology and environmental science.

EDS 2010 EDUCATION SEMINAR (2 credits). Consists of students working closely with faculty and local secondary classroom teachers to document, demonstrate competence in and reflect on the 12 Florida Educator Accomplished Practices and the National Education Technology Standards for Teachers. Prerequisites: EDS 1005.

EDS 2050 EDUCATIONAL PSYCHOLOGY (3 credits). Introduces the various psychological aspects that impact student learning in middle and high school settings. Includes analyses of cognitive development, and memory, motivation and self-concept. Also integrates overviews of classroom strategies and assessment procedures. Prerequisites: PSY 1411.

EDS 3033 MEASUREMENT AND EVALUATION (3 credits). Investigates the foundation of educational measurement and evaluation, the techniques of educational measurement and the presentation and interpretation of data in an educational setting. Prerequisites: EDS 1005.

EDS 3034 ASSESSMENT AND EVALUATION (3 credits). Helps students develop both understanding and competence in alternative/ authentic assessment and grading, and various kinds of school-based evaluation. Definitions and frameworks will guide readings and exercises. Selected competencies in these areas are designed to prepare students to meet teacher requirements. Prerequisites: EDS 3031.

EDS 3095 CLINICAL AND FIELD EXPERIENCE 1 (2 credits). Students engage in clinical and field experiences that complement EDS 3033 and EDS 4051. Experiences include assigned observations in secondary school classrooms, tutoring, small group work and other practical experiences. Corequisites: EDS 3033, EDS 4051.

EDS 3096 CLINICAL AND FIELD EXPERIENCE 2 (2 credits). Students engage in clinical and field experiences that complement EDS 3034 and 4071, 4072 or 4073. Prerequisites: EDS 3095.

EDS 4051 METHODS AND MANAGEMENT OF MIDDLE AND HIGH SCHOOL TEACHING (4 credits). Students demonstrate methods of classroom management that constitute effective teaching practice as defined by the Florida Educator Accomplished Practices. Prerequisites: EDS 1005.

EDS 4060 EDUCATIONAL STRATEGIES FOR ESOL (3 credits). Provides the requisite information and background needed to identify limited-English proficient (LEP) K-12 learners and equips them with appropriate instructional strategies to meet all student learning needs. Prerequisites: EDS 1005.

EDS 4071 METHODS AND STRATEGIES FOR TEACHING MIDDLE AND HIGH SCHOOL SCIENCE (4 credits). Investigates the principles, skills and methods of teaching science at the middle and secondary school level. Emphasizes the laboratory-centered inquiry approach. Prerequisites: EDS 4051.

EDS 4072 METHODS AND STRATEGIES FOR TEACHING MIDDLE AND HIGH SCHOOL MATH (4 credits). Investigates the principles, skills and methods of teaching mathematics at the middle- and secondary-school level. Emphasizes application and practice with a hands-on, discovery approach. Prerequisites: EDS 4051.

EDS 4081 CONTENT AREA READING (3 credits). Provides maximum interaction and strategies needed by teachers of grades 6-12 to teach their students how to succeed across the curriculum with reading. Prerequisites: EDS 4051.

EDS 4090 RESEARCH SEMINAR (2 credits). Includes the planning, designing and implementing of research developed to assess candidate performance on grades 6-12 student learning. (Q) Corequisites: EDS 4095.
EDS 4095 STUDENT TEACHING 1 (6 credits). Prepares pre-service teachers to provide effective instructional management and to be responsive to the intellectual, physical, emotional and social needs of the secondary learner. Students demonstrate the 12 Florida Educator Accomplished Practices at the pre-professional benchmark within the 200-hour internship. Prerequisites: EDS 4071 or EDS 4072.

EDS 4096 STUDENT TEACHING 2 (12 credits). Student teaching is the culminating experience required for all students in teacher education for graduation and recommendation for certification. It is an internship in an approved school under the supervision of an experienced, approved supervising teacher. (Requirement: Completion of all other EDS course requirements.) (Q) Prerequisites: EDS 4095.

EDS 4250 SCIENCE EDUCATION CASE STUDY (1-3 credits). In conjunction with adviser, student selects a single specific issue of topic in science education and performs an in-depth study of that area. (Requirement: Instructor approval.)

EDS 4900 INTERDISCIPLINARY SCIENCE CAPSTONE SEMINAR (1 credit). This seminar is part of the capstone experience for a B.S. degree in the interdisciplinary science program. It is taken during the final semester of the program. Students are required to write a paper and present it orally. (Requirement: Instructor approval.)

EDS 5051 METHODS AND MANAGEMENT OF MIDDLE AND SECONDARY SCHOOL TEACHING (3 credits). Students demonstrate methods of classroom management that constitute effective teaching practice as defined by the Florida Educator Accomplished Practices.

EDS 5055 FOUNDATIONS AND MANAGEMENT OF CLASSROOM INSTRUCTION (3 credits). Examines the contemporary field and foundations of education and the teaching profession. Includes the dynamics of school life, effective teaching practices, classroom management, ethical and legal issues facing teachers, economic and political issues, the history of American education, and educational reform.

EDS 5060 ESOL TEACHING STRATEGIES (3 credits). Prepares future teachers with resources to promote cross-cultural awareness, language development and academic progress. Special attention to approaches, methodologies and techniques designed for limited English proficient children that help all students achieve success in content areas. Prerequisites: EDS 4071 or EDS 4072, PST 2443.

EDS 5067 MEASUREMENT AND EVALUATION (3 credits). Includes the principles of educational measurement and evaluation, the techniques of educational measurement, the presentation and analysis of data collected through measurement and the application of measurement and evaluation.

EDS 5070 EDUCATIONAL STATISTICS (3 credits). Includes sampling procedures, frequency distributions, measures of central tendency, estimation of variability, the normal distribution, differences between two groups, analysis of variance and correlation. Also includes nonparametric techniques, multivariate techniques and computer analysis of educational data.

EDS 5071 METHODS AND STRATEGIES OF TEACHING MIDDLE AND HIGH SCHOOL SCIENCE (3 credits). Investigates the principles, skills and methods of teaching science at the middle and secondary school level. Emphasizes the laboratory centered inquiry approach. Prerequisites: EDS 5051.

EDS 5072 METHODS AND STRATEGIES OF TEACHING MIDDLE AND HIGH SCHOOL MATHEMATICS (3 credits). Investigates the principles, skills and methods of teaching mathematics at the middle and secondary school level. Emphasizes application and practice with a hands-on discovery approach. Prerequisites: EDS 5051.

EDS 5073 METHODS AND STRATEGIES FOR TEACHING SPECIFIC MIDDLE AND HIGH SCHOOL CONTENT (3 credits). Investigates the principles, skills and methods of teaching specific secondary content at the middle and high school levels. Prerequisites: EDS 5051.

EDS 5081 RESEARCH 1 (1-6 credits). Individual research work conducted under the supervision of a science education faculty member.

EDS 5095 ESSENTIALS OF EDUCATIONAL RESEARCH (3 credits). Includes research skills and related competencies involved in the planning, conducting and reporting of applied research studies of the type required for a graduate degree.

EDS 5120 CONTENT AND METHODS IN SCIENCE EDUCATION FOR LOWER-LEVEL ELEMENTARY GRADES (4 credits). Examines the science content supporting the Sunshine State Standards for science applicable to early elementary grades. Emphasizes teaching approaches that incorporate hands-on inquiry experiences and computer technology. (Requirement: Instructor approval.)

EDS 5130 CONTENT AND METHODS IN SCIENCE EDUCATION FOR UPPER-LEVEL ELEMENTARY GRADES (4 credits). Examines the science content supporting the Sunshine State Standards for science applicable to upper elementary grades. Emphasizes teaching approaches that incorporate hands-on inquiry experiences and computer technology. (Requirement: Instructor approval.)

EDS 5135 READING IN THE CONTENT AREA (3 credits). Students develop strategies for designing lessons that will lead middle and high school students to become active readers, engaged in the process of learning with textbooks as well as supplemental materials. Explores how to create active learning environments in which students know how, when and why to use all modes of language to learn.

EDS 5203 THEORIES AND TRENDS IN EDUCATION (3 credits). Provides an overview of human development and learning. Topics include behavioral, social and cognitive learning theories. Emphasizes the application and implications of these theories to educational practice. Includes student review of research articles and other publications that relate to human development and learning theories.

EDS 5226 INTRODUCTION TO COMPUTERS IN EDUCATION (3 credits). Introductory review of various uses for microcomputers in schools. Includes a review of current hardware available, computer application software, use of the World Wide Web, computer assisted instruction software, networking and legal/ethical issues.

EDS 5227 EDUCATIONAL SOFTWARE EVALUATION AND DESIGN (3 credits). Proper design and appropriate evaluation of educational software. Students write programs using established design techniques and procedures. Covers crash-proofing programs, user help menu methods, documentation techniques and screen formatting. Prerequisites: EDS 5226.

EDS 5250 CASE STUDY: SCIENCE EDUCATION (1-6 credits). Involves an in-depth study of a specific issue or topic in science education. Allows a student with a special interest in science education to pursue guided study in that area. (Requirement: Instructor approval.)

EDS 5272 INFORMAL SCIENCE EDUCATION INTERNSHIP (3 credits). A minimum of 120 hours working at a host informal science education venue. Requires formal written and oral presentations. (Requirement: Instructor approval.)

EDS 5274 INFORMAL SCIENCE EDUCATION PROJECT (3 credits). Planning, design and implementation of an informal science education project. (Requirement: Instructor approval.)

EDS 5291 SPECIAL TOPICS IN COMPUTER EDUCATION (1 credit). Topics announced prior to each course offering.

EDS 5292 SPECIAL TOPICS IN COMPUTER EDUCATION (2 credits). Topics announced prior to each course offering.

EDS 5293 SPECIAL TOPICS IN COMPUTER EDUCATION (3 credits). Topics announced prior to each course offering.

EDS 5298 CURRENT TOPICS IN SCIENCE EDUCATION (3 credits). Selected current topics in science education.

EDS 5299 CURRENT TOPICS IN COMPUTER EDUCATION (3 credits). Current topics in the use of computers in the educational setting. Course content varies from year to year. Prerequisites: EDS 5298.

EDS 5311 SPECIAL TOPICS IN MATHEMATICS EDUCATION (1 credit). Topics announced prior to each course offering.

EDS 5312 SPECIAL TOPICS IN MATHEMATICS EDUCATION (2 credits). Topics announced prior to each course offering.

EDS 5313 SPECIAL TOPICS IN MATHEMATICS EDUCATION (3 credits). Topics announced prior to each course offering.

EDS 5350 CASE STUDY: MATHEMATICS EDUCATION (1-6 credits). Involves an in-depth study of a specific issue or topic in mathematics education. Allows a student with a special interest in mathematics education to pursue guided study in that area. (Requirement: Instructor approval.)

EDS 5410 FOUNDATIONS OF ENVIRONMENTAL EDUCATION (3 credits). Introduces and overviews the field of environmental education. Includes an overview of the history and definition of EE, models of environmental literacy and behavior, and published needs assessments and status reports. Concludes with an analysis of current needs/problems and opportunities in Florida.

EDS 5420 METHODS IN ECOLOGY AND ENVIRONMENTAL SCIENCE CONTENT (3 credits). Focuses on concepts in ecology and environmental science, and principles for teaching and learning concepts. Introduces students to models for teaching/learning concepts and generating lessons using selected models. Concludes with an analysis of educational materials.

EDS 5430 METHODS FOR ENVIRONMENTAL PROBLEMS AND ISSUE INVESTIGATION (3 credits). Focuses on skills for analyzing, investigating and evaluating environmental problems and issues. Students practice these skills and apply them in an investigation on a selected problem/issue. Other topics include skill-based teaching strategies and emphasis on these skills in programs and print materials.
EDS 5440 METHODS FOR CITIZENSHIP AND ENVIRONMENTAL RESPONSIBILITY (3 credits). Emphasizes rationales and strategies for teaching citizenship and environmental responsibility. Explores these topics from various perspectives, and develops and applies skills in these areas. Reviews pertinent guidelines and strategies in social studies, science and environmental education.

EDS 5450 CASE STUDY: ENVIRONMENTAL EDUCATION (1-6 credits). Involves an in-depth study of a specific issue or topic in environmental education. Allows a student with a special interest in environmental education to pursue guided study in that area.

EDS 5461 SPECIAL TOPICS IN ENVIRONMENTAL EDUCATION (1 credit). Topics announced prior to each course offering.

EDS 5462 SPECIAL TOPICS IN ENVIRONMENTAL EDUCATION (2 credits). Topics announced prior to each course offering.

EDS 5463 SPECIAL TOPICS IN ENVIRONMENTAL EDUCATION (3 credits). Topics announced prior to each course offering.

EDS 5595 FIELD EXPERIENCE PRACTICUM (3 credits). Field experience in secondary classrooms. (Requirement: Corequisite course or equivalent and instructor approval.) Corequisites: EDS 5051 or EDS 5071 or EDS 5072.

EDS 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

EDS 5999 THESIS (3-6 credits). Individual research work under the direction of a member of the graduate faculty on a selected topic.

EDS 6000 READINGS IN EDUCATIONAL RESEARCH (3 credits). Investigation of relevant research in science, mathematics, environmental or computer education.

EDS 6070 STATISTICS FOR EDUCATIONAL RESEARCH (3 credits). Includes multiple regression/correlation methods, multivariate techniques and computer analysis of educational data. Prerequisites: EDS 5070.

EDS 6071 STATISTICS FOR EDUCATIONAL RESEARCH 2 (3 credits). Examines contemporary statistical strategies for analyzing data in applied educational settings. Includes causal/path analysis and structural equation modeling, discriminant analysis, logistic regression, random coefficient regression for clustered data, and longitudinal regression. Prerequisites: EDS 6070.

EDS 6095 RESEARCH-SCIENCE EDUCATION (1-6 credits). Research under the guidance of a member of the science education faculty in a selected area of science education.

EDS 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

EDS 6999 DISSERTATION-SCIENCE EDUCATION (3-12 credits). Research and preparation of the doctoral dissertation. (Requirement: Admission to candidacy for the doctoral degree.)

EXTENDED STUDIES – ECONOMICS

ECC 2303 INTRODUCTION TO MACROECONOMICS (3 credits). Introduces the concepts that aid in understanding both aggregate economic conditions and the policy alternatives designed to stabilize national economies. Includes the determination of GDP and national income, inflation, unemployment, monetary policy, economic growth and exchange rates. (Requirement: Must be enrolled in University Alliance.) (SS) Prerequisites: MTH 1000 or MTH 1001 or MTH 1701 or MTH 1702.

ECC 2304 INTRODUCTION TO MICROECONOMICS (3 credits). Introduces the neoclassical theory of price determination. Includes supply and demand analysis, production and cost theory, market structure, externalities and public goods, factor payments, income distribution and informational asymmetries. (Requirement: Must be enrolled in University Alliance.) (SS) Prerequisites: MTH 1000 or MTH 1001 or MTH 1701 or MTH 1702.

INTRODUCTION TO ENGINEERING

EGN 1000 INTRODUCTION TO ENGINEERING (3 credits). Introduces engineering problem solving and professional aspects and ethics of engineering with lectures, lab demonstrations and field trips. Includes productive uses for microcomputers and spreadsheets. Also introduces the fields of science and engineering taught at Florida Tech.

EXTENDED STUDIES – HEALTHCARE MANAGEMENT

EHC 1103 MEDICAL ETHICS (3 credits). Examines the moral problems that arise in the practice of medicine. Covers theories about what is good and what is right as related to bioethical and socioethical issues. (Requirement: Must be enrolled in University Alliance.) (HU)

EHC 3302 HEALTHCARE ORGANIZATIONS (3 credits). Studies the U.S. healthcare system. Includes structure, finance, governance, personnel and cultural values. Emphasizes the influences exerted by the economic, political and social forces within the larger society and the healthcare system’s response to these influences. (Requirement: Second-year standing in University Alliance.)

EHC 3303 MANAGED CARE (3 credits). Analyzes the organizational structure and management of managed healthcare. Emphasizes current trends including the payment and financial aspects of America’s managed healthcare system. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EHC 3302.

EHC 4402 COMMUNITY HEALTH EVALUATION (3 credits). Studies descriptive epidemiology and its application to the analysis of community health. Emphasizes the computation and interpretation of basic health status indicators, as well as the application of health promotion and disease prevention strategies. Also covers the U.S. public health system and practices. (Requirement: Fourth-year standing in University Alliance.)

EHC 4410 QUALITY IMPROVEMENT METHODS IN HEALTHCARE (3 credits). Studies in depth the quality improvement philosophy, methodologies, tools and issues related to healthcare. Emphasizes quality standard setting, system design, reporting mechanisms and effectiveness assessment. Closely examines the relationship between quality improvement programs, risk management and use review. (Requirement: Fourth-year standing in University Alliance.) Prerequisites: EHC 3302.

EHC 4498 HEALTH PLANNING AND POLICY MANAGEMENT (3 credits). Integrates health services planning, organization management and evaluation as part of capstone. Studies policy formation and management. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EHC 4402.

EXTENDED STUDIES – HUMAN RESOURCES MANAGEMENT

EHR 3335 SELECTION AND PLACEMENT (3 credits). Focuses on people as strategic resources whose availability and capabilities influence organizational effectiveness. Studies strategies for attracting, assessing, acquiring and withdrawing personnel. Discusses implications of planning and implementing staffing policies. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EHR 3331.

EHR 3340 TRAINING AND DEVELOPMENT (4 credits). Studies the theory and technology of organizational training and development. Includes concepts and applications to training, methodology for training, evaluation, forces shaping future training development, and current practices and needs. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EHR 3331.

EHR 3360 COMPENSATION AND BENEFITS (3 credits). Examines the financial reward systems in organizations. Studies the relevant theoretical and legal perspectives. Includes job evaluation, wage surveys, incentives, pay equity, benefits and compensation strategy. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMG 3331.

EXTENDED STUDIES – LAW

ELA 2601 LAW I (3 credits). Investigates the operational responsibilities of individuals in light of political, moral, social, ethical and jurisprudential considerations. (Requirement: Must be enrolled in University Alliance.)

ELA 2602 LAW II (3 credits). Covers advanced topics in the legal aspects of the banking system. Analyzes in depth the Uniform Commercial Code, financial instruments, bankruptcy, creditor-debtor relationships and securities regulations. (Requirement: Must be enrolled in University Alliance.) Prerequisites: ELA 2601.

ELA 2603 ADMINISTRATIVE AND PERSONNEL LAW (3 credits). Studies the effects of administrative and personnel law on the decision-making responsibilities of practitioners. Explores the impact on personnel policies and practices of organizations. Addresses the development, intent and implications of proactive labor legislation from the federal to the local level. (Requirement: Must be enrolled in University Alliance.) Prerequisites: ELA 2601.

ELA 3001 LEGAL ASPECTS IN HEALTHCARE MANAGEMENT (3 credits). Covers the legal concepts that confront most healthcare professionals. Includes HIPPA, limitations, civil procedures, medical records, organizational structures (HMO, MMO, PPO and others), patients’ rights, state and federal laws, living wills and healthcare powers of attorney and professional liability insurance. (Requirement: Must be enrolled in University Alliance.) Prerequisites: ELA 2601.
EXTENDED STUDIES – MANAGEMENT

EMG 3225 FINANCE FOR MANAGERS (3 credits). Introduces the principles of corporate financial management. Emphasizes the time value of money in investments of real or financial assets. Covers planning for current assets and liabilities, and long-range capital. Passing grade in EST 2703 is recommended. (Requirements: Ability to use computer spreadsheets and financial business calculator, and enrollment in University Alliance.) Prerequisites: EAC 2212.

EMG 3301 PRINCIPLES OF MANAGEMENT (3 credits). Introduces management as a discipline and process. Includes evolution and scope of management, decision-making, planning, strategy, organizing, staffing, leading, control, change, and the importance of management in the global environment and ethical considerations of management decisions. (Requirements: Successful completion of 30 credit hours and second-year standing in University Alliance.) Prerequisites: COM 1102.

EMG 3325 PUBLIC ADMINISTRATION (3 credits). Analyzes the nature of public administration, its structure and limitations. Includes staff organization and chain of command, unemployment policies, personnel training and management, employees, organizations and public relations. (Requirement: Third-year standing in University Alliance.)

EMG 3327 MANAGEMENT INFORMATION SYSTEMS (3 credits). Studies the important uses of information technology in organizations. Includes information requirements and flow, system design and analysis methodologies, the generation and accumulation of data for decision-making, and the implementation and control of information systems. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMG 3301.

EMG 3328 BUSINESS ETHICS (3 credits). Studies general moral principles and their application to ethical issues and problems pertaining to business activities, and the nature of the corporation in contemporary society. (Requirement: Third-year standing in University Alliance.) Prerequisites: COM 1102.

EMG 3331 MANAGEMENT OF HUMAN RESOURCES (3 credits). Covers the principles and systems related to the management and leadership of human resources. Includes legal and administrative law issues; health, safety and security; selection and placement; job analysis; training and development; compensation and benefits; and job analysis systems. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMG 3301.

EMG 3340 INTERNATIONAL MANAGEMENT (3 credits). Covers a broad spectrum of issues critical to developing a sound base of international business skills. Includes the assessment of foreign business practices, understanding international financial and trade practices and the impact on decision-making, and strategy development and implementation. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMK 3601.

EMG 3398 ORGANIZATION THEORY (3 credits). Emphasizes fundamental concepts of organization theory from a managerial perspective as applied to the behavior and performance of organizations. Serves as the capstone course for the program. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMG 3301.

EMG 4000 RESEARCH 1 (1 credit). Includes selection of an industry and completion of a research plan for analysis of that industry. Covers primary and secondary research, research design and resources available for environmental and industry analysis. First of a three-course QEP research sequence. (Requirement: Fourth-year standing.) (Q) Prerequisites: EMG 4000.

EMG 4001 RESEARCH 2 (1 credit). Continues EMG 4000 by carrying out the environmental and industry research planned during the previous course. Includes collecting, organizing and analyzing relevant information that affects the multiple environments in which a company operates. Second of a three-course QEP research sequence. (Q) Prerequisites: EMG 4000. Corequisites: EBA 4498.

EMG 4002 RESEARCH 3 (1 credit). Engages students in the revision and re-submission process, culminating in a final research paper. Applies communication skills in the development of a public poster session and discussion with community participants. Third of a three-part QEP research sequence. (Q) Prerequisites: BUS 4001.

EMG 4410 CONTINUOUS QUALITY MANAGEMENT (3 credits). Provides a contemporary approach to organization and management philosophy, theory, concepts and applications. Focuses on improving quality, productivity and competitive position through a realistic, relevant and sweeping view of the body-of-knowledge needed by operating managers to improve systems and processes. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMG 3301.

EMG 4412 ORGANIZATIONAL BEHAVIOR AND DEVELOPMENT (3 credits). Studies human behavior in organizations. Blends newer concepts of behavior theory with classical organizational theory. Includes methods for bringing change to organizations. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMG 3301.

EXTENDED STUDIES – MARKETING

EMK 3320 ENTREPRENEURAL MARKETING (3 credits). Examines the skills and tools needed for start-up marketing. Covers the identification of market segments, product positioning, estimating product demand, setting prices and rapid growth management. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMK 3601.

EMK 3601 PRINCIPLES OF MARKETING (3 credits). Provides the fundamental principles in the marketing of goods, services and ideas. Includes planning, pricing, promotions and distribution. Focuses on global marketing, marketing ethics and managing the marketing function. (Requirement: Successful completion of 30 credits hours and second-year standing in University Alliance.) Prerequisites: COM 1102, EEC 2303.

EMK 3607 ADVERTISING MANAGEMENT (3 credits). Studies the advertising process and the available techniques to plan, implement and monitor an advertising campaign. Focuses on the application of these techniques to a full-service advertising agency. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMK 3601.

EMK 3663 INTERNATIONAL MARKETING (3 credits). Examines marketing from a global perspective. Focuses on the effects of international trade and the political, legal, financial and cultural environments on marketing mix decisions. Studies the analysis and design of marketing strategies for diverse international environments. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EMK 3601.

ENGINEERING MANAGEMENT

ENM 3100 QUALITY ENGINEERING (3 credits). Principles and techniques for establishing quality goals, identification of customer needs and requirements, measurement of quality objectives and product/process engineering to improve system performance. (Requirement: Instructor approval.)

ENM 5200 PROJECT ENGINEERING (3 credits). Principles of project management to design and develop products and services within budget, on time and to specification. Includes work planning, organization design, requirements analysis, project control and PERT/CPM. (Requirement: Instructor approval.)

ENM 5310 TOPICS IN SYSTEMS ENGINEERING (3 credits). Topics selected from the field of systems engineering, such as requirement analysis, function allocation, cost engineering, risk management and system-level design. (Requirement: Instructor approval.)

ENM 5320 TOPICS IN TECHNICAL MARKETING (3 credits). Topics such as technology diffusion, competitive advantage, innovation, product development and positioning of high-technology products and services. (Requirement: Instructor approval.)

ENM 5330 TOPICS IN ENGINEERING OPERATIONS AND LOGISTICS (3 credits). Topics such as forecasting, plant location, facility layout, inventory systems, maintenance, process engineering, supply chains, scheduling, manufacturing and materials handling. (Requirement: Instructor approval.)

ENM 5340 TOPICS IN TEAM DYNAMICS AND PRODUCTIVITY (3 credits). Topics selected from the areas of team building, communications, creative problem solving in engineering, work design and engineering ethics. (Requirement: Instructor approval.)

ENM 5350 TOPICS IN ENGINEERING MODELING AND DESIGN (3 credits). Topics such as simulation, visualization, animation, graphics, CAD, deterministic and probabilistic models, and data analysis. (Requirement: Instructor approval.)

ENM 5360 TOPICS IN PRODUCT DEVELOPMENT AND TECHNOLOGY STRATEGY (3 credits). Topics such as technology transfer, product strategy formulation, visioning, technology road maps and innovation. (Requirement: Instructor approval.)

ENM 5420 TECHNOLOGY COMMERCIALIZATION STRATEGIES (3 credits). Systematically covers state-of-the-art technical, marketing and business aspects of technology commercialization in 18 steps through three phases and the investigation, feasibility, development, introduction, growth and maturity stages. (Requirement: Graduate standing in engineering, science or mathematics, or instructor approval.)

ENM 5495 SPECIAL PROJECTS IN ENGINEERING MANAGEMENT (3 credits). Special graduate projects undertaken on a cooperative basis between the student and a member of the graduate faculty. May include a literature search in a selected area or research and development in one of the engineering management specialty areas. (Requirement: Instructor approval.)

ENM 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)
ENM 5900 ENGINEERING MANAGEMENT INTERNSHIP (3 credits). Industry-based internship experience undertaken under the supervision of a member of the graduate faculty. Provides industrial experience to students without prior experience in a practical engineering setting. Requires industrial presentations. (Requirement: Instructor approval.)

ENM 5999 THESIS RESEARCH (3-6 credits). Individual research work under the direction of a member of the graduate faculty on a selected topic. (Requirement: Instructor approval.)

ENVIRONMENTAL SCIENCE

ENS 1001 THE WHOLE EARTH COURSE (3 credits). Consists of six interrelated modules (cosmosphere, geosphere, hydrosphere, atmosphere, biosphere, anthroposphere) taught by faculty of the College of Engineering, College of Aeronautics and College of Science. Emphasizes the interactions and interdependence of Earth systems. Includes the role of humans in global change.

ENS 4010 ATMOSPHERIC ENVIRONMENTS (3 credits). Origin, fate, effects and distribution of air pollutants. Covers dispersion modeling, federal and state legislation, source control and monitoring. (Requirement: Junior standing.)

ENS 5105 ATMOSPHERIC POLLUTION LAB (1 credit). Provides hands-on familiarity with air sampling devices and analytical methods of analysis. Involves both the acquisition and the analysis of atmospheric samples. Corequisites: CHM 1101, ENS 3101, PHYS 1001.

ENS 4911 ENVIRONMENTAL FIELD PROJECTS PROPOSAL (1 credit). Preparation for the summer research program, Environmental Field Projects. Students are guided through the process of selecting, designing and proposing research projects to be carried out during the summer. (Q)

ENS 4004 AQUATIC ENVIRONMENTAL TOXICOLOGY (3 credits). The concepts of toxicology, classifications, kinetics of biological effects and environmental sampling and testing. Includes the effect of environmental agents on aquatic systems and the fate of chemicals in the environment. (Requirement: Senior standing.) Prerequisites: BIO 1020, CHM 1102.

ENS 4009 ENVIRONMENTAL SATELLITE SYSTEMS AND DATA (3 credits). Introduces environmental satellite systems, resulting data and image processing techniques. Includes discussions on the use of geographic information systems and use of satellite, aircraft and remote-sensing platforms. Uses computers and imagery for applications to environmental issues and problems.

ENS 4010 GEOGRAPHIC INFORMATION SYSTEMS (3 credits). Concepts and applications of geographic information systems (GIS). Presents case studies from environmental and geoscience applications.

ENS 4300 RENEWABLE ENERGY AND THE ENVIRONMENT (3 credits). Understanding human energy needs; alternative generating systems; renewable sources including biomass, hydro, ocean current, solar and wind; socioeconomic implications of sustainable energy. Prerequisites: PHYS 2002.

ENS 4700 ENVIRONMENTAL HYDROLOGY (3 credits). Covers descriptive and quantitative aspects of surface and groundwater hydrology, emphasizing both data interpretation and measurement methodology. Stresses subject areas of particular importance to environmental scientists and meteorologists. (Requirement: Senior standing.)

ENS 4701 ENVIRONMENTAL REGULATION AND IMPACT ASSESSMENT (3 credits). Analyzes environmental legislation and the impacts and implications of these regulations on society. Emphasizes environmental impact analysis and environmental impact statement preparation methods. (Requirement: Instructor approval or senior standing.)

ENS 4800 LIMNOLOGY (3 credits). Chemical, physical and biological dynamics of inland waters. Prerequisites: BIO 1020, CHM 1102.

ENS 4901 SPECIAL TOPICS IN ENVIRONMENTAL SCIENCE (1 credit). Special course topics not covered in the regular curriculum, offered on occasion to specific student groups. May be repeated for a maximum of three credits. (Requirement: Instructor approval.)

ENS 4903 SPECIAL TOPICS IN ENVIRONMENTAL SCIENCE (3 credits). Special course topics not covered in the regular curriculum, offered on occasion to specific student groups. May be repeated for a maximum of nine credits. (Requirement: Instructor approval.)

ENS 4911 ENVIRONMENTAL FIELD PROJECTS 1 (1 credit). These summer research investigations focus on environmental problems of local, regional and global dimensions. A major focus has been on the Indian River Lagoon system. Students often work in teams configured to accomplish the specific objectives. May be repeated for a maximum of four credits. (Requirement: Instructor approval or senior standing.) (Q)

ENS 4912 ENVIRONMENTAL FIELD PROJECTS 2 (2 credits). These summer research investigations focus on environmental problems of local, regional and global dimensions. A major focus has been on the Indian River Lagoon system. Students often work in teams configured to accomplish the specific objectives. May be repeated for a maximum of four credits. (Requirement: Instructor approval or senior standing.) (Q) Prerequisites: ENS 4911.

ENS 5000 ENVIRONMENTAL SCIENCE SEMINAR (0 credits). Reports and discussions of current research and environmental events by graduate students, faculty and visiting scientists. Required attendance for all graduate students.

ENS 5001 GLOBAL ENVIRONMENTAL PROBLEMS AND SOLUTIONS (3 credits). Analyzes global environmental problems including human population growth, climate change, ozone depletion, deforestation and desertification. Students research specific problems and develop potential solutions. (Requirement: Instructor approval.)

ENS 5004 AQUATIC ENVIRONMENTAL TOXICOLOGY (3 credits). The concepts of toxicology, classifications, kinetics of biological effects, and environmental sampling and testing. Includes the effect of environmental agents on aquatic systems and the fate of chemicals in the environment. (Requirement: Graduate standing in science or engineering.)

ENS 5006 MATHEMATICAL MODELS OF ENVIRONMENTAL SYSTEMS (3 credits). Introduces the application of systems, science and computers to environmental problems. Analyzes models of water pollution and water resources, air pollution control and world food, energy and natural resource use. (Requirement: Instructor approval.) Prerequisites: CSE 2402 or CSE 2410.

ENS 5009 INTERNSHIP (0-3 credits). Application of environmental resources management principles in off-campus activities designed to give actual experience with planning agencies, regulatory agencies and other related activities. The internship is designed to meet the background, training and career needs of the individual student. (Requirement: Department head approval.)

ENS 5101 INTRODUCTION TO AIR POLLUTION (3 credits). Origin, fate, effects and distribution of air pollutants. Includes dispersion modeling, legislation, source control and monitoring.

ENS 5300 PRINCIPLES OF RENEWABLE ENERGY (3 credits). Overviews energy generating systems; renewable energy sources including wind, solar, tidal, biomass, hydro and ocean currents. Emphasizes sustainable energy and its environmental, social and economic effects. (Requirement: Graduate standing.)

ENS 5610 PRINCIPLES OF ENVIRONMENTAL SECURITY (3 credits). Scientific foundations of environmental hazards, factors leading to environmental instability, ecosystem resilience and sustainability, techniques to monitor the response of Earth system, information synthesis, disaster preparedness and emergency response techniques, traditional and political aspects of treaty monitoring, case studies.

ENS 5700 INTRODUCTION TO WATER RESOURCES (3 credits). Stresses both descriptive and quantitative surface water and groundwater hydrology, particularly subjects of importance to environmental scientists such as hydrologic budgets, storm water management and groundwater quantity and quality.

ENS 5701 ENVIRONMENTAL REGULATION AND IMPACT ASSESSMENT (3 credits). Analyzes environmental legislation and the impacts and implications of these regulations on society. Emphasizes environmental impact analysis and environmental impact statement preparation methods. (Requirement: Graduate standing in science or engineering.)

ENS 5800 LIMNOLOGY (3 credits). Chemical, physical and biological dynamics of inland waters. (Requirement: Graduate standing in science or engineering.)

ENS 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

ENS 5901 SPECIAL TOPICS IN ENVIRONMENTAL SCIENCE (1 credit). Special course topics not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

ENS 5902 SPECIAL TOPICS IN ENVIRONMENTAL SCIENCE (2 credits). Special course topics not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

ENS 5903 SPECIAL TOPICS IN ENVIRONMENTAL SCIENCE (3 credits). Special course topics not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

ENS 5999 THESIS RESEARCH (3-6 credits). Individual research under the direction of a member of the graduate faculty in a selected environmental topic. May be repeated for a maximum of six credits. (Requirement: Thesis adviser approval.)
EVS 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

EVS 6993 RESEARCH IN ENVIRONMENTAL SCIENCE (1-3 credits). Research under the guidance of a member of the graduate faculty. Repeatable as required.

EVS 6999 DISSERTATION IN ENVIRONMENTAL SCIENCE (3-12 credits). Research and preparation of the doctoral dissertation. (Requirement: Admission to candidacy for doctoral degree.)

ENGINEERING PROTRACK COOPERATIVE EDUCATION

EPE 1000 PROTRACK COOPERATIVE EDUCATION PREPARATION (0 credits). Prepares Protrack students for cooperative education experiences and develops career planning and job search skills and techniques. Teaches the fundamentals of career exploration, resume development, interviewing skills and special job search techniques. Also covers workplace etiquette and ethics to help make a smooth transition to the workplace. (Requirements: Enrollment in Protrack program, 2.7 cumulative GPA and coop coordinator approval.)

EPE 1100 PROTRACK COOPERATIVE EDUCATION (3 credits). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Includes work in private industry, business and public agencies. Classifies student as full time when registered for three credits. (Requirements: Enrollment in Protrack program, 2.7 cumulative GPA and coop coordinator approval.) Prerequisites: EPE 1000.

EPE 2100 PROTRACK COOPERATIVE EDUCATION (3 credits). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Includes work in private industry, business and public agencies. Classifies student as full time when registered for three credits. Can be applied as free elective credit. (Requirements: Enrollment in Protrack program, 2.7 cumulative GPA and coop coordinator approval.) Prerequisites: EPE 1100.

EPE 3100 ENGINEERING PROTRACK COOPERATIVE EDUCATION (3 credits). Prepares students for professional careers. Students work on engineering projects including one or more of the following realistic constraints: economic, environmental, social, political, ethical, health, safety, security and manufacturing. Classifies student as full time. Can be used for a maximum of three credits of technical elective. (Requirements: Enrollment in Protrack program, 2.7 cumulative GPA and coop coordinator approval.) Prerequisites: EPE 2100.

ENGLISH AS A SECOND LANGUAGE

ESL 0341 INTENSIVE GRAMMAR (3 credits). Enables students to communicate in oral and written forms of English, using complex sentences. Focusses on formal academic structure, which is required for technical reading and writing. Credit cannot be applied toward any Florida Tech degree.

ESL 0342 INTENSIVE ORAL COMMUNICATION (3 credits). Gives the more advanced student of English practice in oral communication within an academic setting. Also offers the student controlled practice with vowels, consonants, word stress and intonation patterns. Credit cannot be applied toward any Florida Tech degree.

ESL 0343 INTENSIVE LISTENING COMPREHENSION (3 credits). Provides students the opportunity to hear authentic English spoken with different speech patterns in a variety of academic lectures, to develop note-taking skills and to synthesize the facts contained in the listening selections. Credit cannot be applied toward any Florida Tech degree.

ESL 0344 INTENSIVE READING (3 credits). Offers guided practice in reading scientifically and academically oriented materials in English, emphasizing strategies necessary to improve reading speed and quality of comprehension. Provides an opportunity for students to acquire vocabulary and a grasp of basic scientific concepts. Credit cannot be applied toward any Florida Tech degree.

ESL 0345 INTENSIVE WRITING (3 credits). Enables the student of English to apply techniques needed in planning, organizing and developing a good paragraph. Emphasizes extended in-class written work, with individualized corrections and rewriting. Credit cannot be applied toward any Florida Tech degree.

ESL 0401 ADVANCED GRAMMAR (3 credits). Includes a brief review of basic English structure and sentence patterns, followed by extensive practice on the features of more advanced English structure. Focuses on the elimination of habitual errors and on the acquisition of the quality and quantity of language necessary for academic success. Credit cannot be applied toward any Florida Tech degree.

ESL 0402 ADVANCED ORAL COMMUNICATION (3 credits). Teaches advanced skills in public speaking to the student of English. Deals primarily with formal speaking situations, but also gives instruction in small group and interpersonal communication. Credit cannot be applied toward any Florida Tech degree.

ESL 0403 ADVANCED LISTENING COMPREHENSION (3 credits). Prepares students of English for academic lecture comprehension. Students learn to refine note-taking skills and to synthesize information heard in lectures. Credit cannot be applied toward any Florida Tech degree.

ESL 0404 ADVANCED READING (3 credits). Offers further directed reading of scientifically oriented academic materials in English, emphasizing the development of efficient comprehension and analysis of basic terminology in several fundamental scientific, technical and management disciplines. Credit cannot be applied toward any Florida Tech degree.

ESL 0405 ADVANCED WRITING (3 credits). Provides extensive practice in basic organizational techniques needed for academic writing in English. Emphasizes refining complex sentence structure, and analyzing and organizing details into an appropriate paragraph. Credit cannot be applied to any Florida Tech degree.

EXTENDED STUDIES -- STATISTICS

EST 2703 STATISTICS (3 credits). Emphasizes mathematical concepts. Includes measures of central tendency and spread; probability; binomial, normal and t distributions; statistical inference; and linear regression and correlation. (Requirements: Must be enrolled in University Alliance.) Prerequisites: MTH 1000 or MTH 1001 or MTH 1701 or MTH 1702.

HUMAN-CENTERED DESIGN

HCD 6810 LIFE-CRITICAL SYSTEMS (3 credits). Requires students to develop and evaluate a synthesis of life-critical systems (LCS) illustrated by space systems, aeronautics, nuclear energy systems and various emergency systems. Improves knowledge and skills of the differences between technology-centered and human-centered design of LCS.

HUMANITIES

HUM 1000 POPULAR CULTURE FOR FRESHMEN (3 credits). Examines contemporary issues and themes in popular culture. Cannot be used to fulfill undergraduate core requirements. (Requirements: Freshman status.) (HU)

HUM 1010 CREATIVE ARTS PRACTICUM (1 credit). Provides students with an opportunity to earn credit for performances and productions in the creative arts under the direction of a member of the humanities faculty. Areas may include the fine arts, music, theater arts and creative writing. Can be repeated for a total of four credits. May not be used to satisfy humanities elective requirement. (Requirement: Instructor approval.)

HUM 1015 MYTHOLOGY (3 credits). Introduces classical, Norse and medieval mythology through the study of themes and narratives that emphasize the importance of mythical elements to the modern world. (HU)

HUM 1020 ART APPRECIATION (3 credits). Presents basic terms, theories and techniques of the artist, and major art movements and media in the visual arts. Increases understanding and aesthetic pleasure, and develops understanding of the techniques and terminology in the visual arts. (Requirement: Must be enrolled in University Alliance.) (HU)

HUM 1021 INTEGRATED ARTS (3 credits). Introduces visual, written and musical works of art to increase understanding. Develops techniques and terminology in the arts through lectures, discussion, and live performances and events. (Requirement: Must be enrolled in University Alliance.) (HU)

HUM 1023 PHILOSOPHY OF HUMAN NATURE (3 credits). traces the human pursuit of self-knowledge from ancient Greece to the present. Explores such fundamental philosophical questions as: How can we think clearly without prejudice; is life intrinsically valuable; can science explain everything; and why do we exist? (Requirement: Must be enrolled in University Alliance.) (HU)

HUM 1024 REligIONS OF THE WORLD 1: WESTERN RELIGIONS (3 credits). Studies western religions. Includes religions of nonliterate societies and ancient religions, Judaism, Christianity and Islam. (Requirement: Must be enrolled in University Alliance.) (HU)

HUM 1025 REligIONS OF THE WORLD 2: EASTERN RELIGIONS (3 credits). Studies eastern religions. Includes Hinduism, Buddhism, Confucianism, Taoism and the religions of Japan. (Requirement: Must be enrolled in University Alliance.) (HU)

HUM 1041 CONCERT CHOIR (1 credit). Prepares students for professional careers by integrating alternate periods of academic study and career-related work experience. Includes work in private industry, business and public agencies. Classifies student as full time when registered for three credits. Can be used for a maximum of three credits of technical elective. Credit cannot be applied toward any Florida Tech degree.

HUM 1052 WIND ENSEMBLE (1 credit). Provides students with the opportunity to earn credit through performance as a part of a wind ensemble under the direction of a member of the humanities faculty. May be repeated for a total of four credits. May not be used to satisfy humanities elective credit. (Requirement: Instructor approval.)

250 Florida Tech
HUM 1053 STRING ENSEMBLE (1 credit). Provides students the opportunity to earn credit through performance as part of a wind ensemble under the direction of a member of the humanities faculty. May be repeated for a total of four credits. May not be used to satisfy humanities elective credit. (Requirement: Instructor approval.)

HUM 1150 FUNDAMENTALS OF MUSIC (3 credits). Introduces music notation and structure. Includes basic elements of music composition, clefs, pitch and rhythm reading and counting, major and minor scales and keys, simple intervals, chords and melody writing. (HU)

HUM 1540 ETHICS (3 credits). Explores ethical theories in the context of contemporary moral problems. Topics may include abortion, euthanasia, capital punishment and torture. (HU)

HUM 2051 CIVILIZATION 1: ANCIENT THROUGH MEDIEVAL (3 credits). Introduces civilization from its early development to the European Renaissance. Emphasizes the interpretation of primary texts that reflect the intellectual and historical changes in society. The first of two interdisciplinary courses. Prerequisites: COM 1102.

HUM 2052 CIVILIZATION 2: RENAISSANCE THROUGH MODERN (3 credits). Similar in purpose and method to HUM 2051, continues the interpretation of primary texts, emphasizing the Renaissance period, the Enlightenment, Romanticism and the Modern Age. Prerequisites: COM 1102.

HUM 2055 CRITICAL APPROACHES TO HUMANITIES AND SOCIAL SCIENCES (3 credits). Examines issues in the humanities and the social sciences. Improves students' critical thinking and writing abilities. Topics announced prior to registration. (HU/SS) Prerequisites: COM 1101.

HUM 2140 WORLD ARCHITECTURE (3 credits). Surveys some of the most significant architectural works from pre-history to the present from an ethically and socially diverse perspective. Includes design, construction methods, effects of technology, purpose and function, as well as basic methods of analysis and interpretation. (HU/SS) Prerequisites: COM 1101.

HUM 2141 WORLD ART HISTORY 1: PRE-HISTORY TO EARLY GLOBAL AWARENESS (3 credits). Surveys world art history and methodology from pre-history to circa 1500. Emphasizes analyzing and understanding works of painting, sculpture, textiles and decorative arts in their respective historical and cultural contexts. (HU/SS) Prerequisites: COM 1102.

HUM 2142 WORLD ART HISTORY 2: EARLY MODERN TO POST-COLONIAL (3 credits). Surveys world art history and methodology from circa 1500 to present day. Emphasizes analyzing and understanding works of painting, sculpture, photography, textiles, decorative arts, alternative art forms and new media in their respective historical and cultural contexts. (HU/SS) Prerequisites: COM 1102.

HUM 2150 JAZZ ENSEMBLE (1 credit). Provides the experienced music student the opportunity to earn credit through performance as part of a jazz ensemble under the direction of a member of the humanities faculty. May be repeated for a total of four credits. May not be used to satisfy humanities elective credit. (Requirements: Instructor approval and two semesters of other ensemble courses.)

HUM 2151 MUSIC THEORY 1 (3 credits). Examines notational elements, intervals, chords and tonal harmony. Includes basic singing, and keyboard and dictation exercises in a lab setting. (HU) Prerequisites: COM 1102, HUM 1150.

HUM 2152 MUSIC APPRECIATION (3 credits). Introduces the styles and history of music. Teaches musical discourse and critical listening. Familiarizes students with works of music in the various historical style periods. (HU) Prerequisites: COM 1102.

HUM 2153 POPULAR MUSIC AND CULTURE (5 credits). Introduces the grammar of Western music through music theory. Teaches skills in pitch and rhythm notation, and the fundamentals of melody, harmony and time. Familiarizes students with up-to-date notation and counterpoint software. (HU) Prerequisites: COM 1102.

HUM 2226 SURVEY OF WORLD LITERATURE 2 (3 credits). Surveys world literature through 20th-century short stories drawn from a wide variety of languages and cultures. Topics include colonization, cultural identity, alienation, gender roles, family life and social class. (Requirements: must be enrolled in University Alliances.) (HU) Prerequisites: COM 1102.

HUM 2250 LITERATURE: VOICE AND VISION (3 credits). A close reading and interpretation of texts representing the major genres of literature: short story, poem, drama and novel. (HU)

HUM 2385 SPECIAL TOPICS IN WORLD HISTORY (3 credits). Examines cultural, geographical and philosophical issues in world history. Topics announced prior to registration. (HU/SS) Prerequisites: COM 1102.

HUM 2401 INTRODUCTION TO LAW (3 credits). Introduces the basics of the U.S. legal system. Explores the U.S. Constitution, civil liberties and civil rights, the U.S. judicial system and how citizens interact with it. (HU/SS) Prerequisites: COM 1101.

HUM 2480 INTRODUCTION TO POLITICAL SCIENCE (3 credits). Introduces students to the theories and concepts of political science. Emphasizes examining the interaction between ideas, values and institutions in contemporary U.S. political culture. (SS)

HUM 2510 LOGIC (3 credits). Deals mainly with deductive logic, although all the fallacies of reasoning are examined in both an informal and a formal context. Brings out the role of logic in science and law, as well as ways of making formal proofs of validity. (HU) Prerequisites: COM 1101.

HUM 2570 BIOETHICS (3 credits). Studies ethical questions raised by 20th-century technology as they affect medicine, ecology and social issues. (HU)

HUM 3026 THE CIVILIZATION OF ISLAM (3 credits). Focuses on some of the achievements of Islam from 7th-century Arabic, to medieval Spain and India, to the 20th century. Uses documents from literature, theology, architecture, science and the contemporary media. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3085 SPECIAL TOPICS IN HUMANITIES (3 credits). Offers interdisciplinary study of a particular period, movement, genre or individual that embraces more than a single humanistic discipline. Topics announced prior to registration. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3150 MASTERWORKS OF MUSIC (3 credits). Works of master composers in the various stylistic periods, 1600 to the present: Bach and Handel, Mozart and Haydn, Beethoven, the 19th century and early 20th centuries. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3151 MEDIEVAL, RENAISSANCE AND BAROQUE MUSIC (3 credits). Surveys musical styles and practices from the Middle Ages through the Renaissance. Includes an extended look at the baroque style. Prerequisites: HUM 2051, HUM 2052.

HUM 3152 CLASSICAL, ROMANTIC AND MODERN MUSIC (3 credits). Surveys works of master composers from the late Baroque (Bach and Handel) through Mozart, Beethoven and the Romantics, to 20th- and 21st-century musicians. Prerequisites: HUM 2051, HUM 2052.

HUM 3185 SPECIAL TOPICS IN FINE ARTS (3 credits). Studies a particular period, movement or individual artist or composer. Topics announced prior to registration. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3212 ENGLISH AND AMERICAN LITERATURE 1 (3 credits). Surveys English and American literature of the late 18th to early 20th century, from the French Revolution to World War I. Emphasizes the interpretation of texts that reflect changing ideas about individual and national identities during revolutionary times. Prerequisites: HUM 2051, HUM 2052.

HUM 3213 ENGLISH AND AMERICAN LITERATURE 2 (3 credits). Surveys English and American literature in the 20th and 21st centuries, from World War I to the present. Emphasizes the interpretation of texts that represent the development of the modern world and modern selves. Prerequisites: HUM 2051, HUM 2052.

HUM 3230 SHAKESPEARE AND HIS CONTEMPORARIES (3 credits). Studies a particular author, a group of authors, a historical literary movement or a literary theme or genre. Topics announced prior to registration. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3275 CONTEMPORARY LITERATURE (3 credits). Studies literature since the 1960s. May include short stories, plays, poems and novels by McGuane, Davies, Percy, Fowles, Pinter, Beckett and Morrison. The syllabus varies considerably from semester to semester. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3285 SPECIAL TOPICS IN LITERATURE (3 credits). Studies a particular author, a group of authors, a historical literary movement or a literary theme or genre. Topics announced prior to registration. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3311 AMERICAN HISTORY: PRE-COLUMBIAN TO CIVIL WAR (3 credits). Surveys some of the basic problems in U.S. history through the Civil War era. Emphasizes origins, social characteristics and competing cultural values of the peoples that formed the American nation. (HU/SS) Prerequisites: HUM 2051, HUM 2052.

HUM 3332 AMERICAN HISTORY: FROM RECONSTRUCTION TO THE PRESENT (3 credits). Examines the major ideas, ideals and events that have determined the American experience in the 19th and 20th centuries. (HU/SS) Prerequisites: HUM 2051, HUM 2052.

HUM 3351 HISTORY OF SCIENCE AND TECHNOLOGY: ANCIENT AND MEDIEVAL (3 credits). Surveys the origins of science in antiquity and the Middle Ages. Includes development of mathematical, physical and biological thought in the ancient and medieval period, and the relationship between science, technology and religion. (HU/SS) Prerequisites: HUM 2051, HUM 2052.

HUM 3352 HISTORY OF SCIENCE AND TECHNOLOGY: RENAISSANCE TO PRESENT (3 credits). Surveys the principal developments in science, mathematics and technology from the Enlightenment to the present. Includes scientific revolution, development of modern biology and the relationship between technology and science. (HU/SS) Prerequisites: HUM 2051, HUM 2052.

HUM 3385 SPECIAL TOPICS IN HISTORY (3 credits). Offers an opportunity for in-depth analysis of a historical problem or event. Includes a wide range of possibilities. Topics announced prior to registration. (HU/SS) Prerequisites: HUM 2051, HUM 2052.
HUM 3401 CONSTITUTIONAL LAW 1 (3 credits). Surveys the evolution of U.S. constitutional law. Emphasizes the development of the U.S. Supreme Court. Uses important legal cases to determine how power is distributed between the national and state governments. (HU/SS) Prerequisites: HUM 2051 or HUM 2052.

HUM 3402 CONSTITUTIONAL LAW 2 (3 credits). Continues HUM 3401. Includes in-depth study of the distribution of power between individuals and government through review of important legal cases dealing primarily with civil liberties and civil rights. (HU/SS) Prerequisites: HUM 3401.

HUM 3485 SPECIAL TOPICS IN SOCIAL SCIENCE (3 credits). Studies a particular social group or institution, social process or social change. Topics announced prior to registration. (SS) Prerequisites: HUM 2051, HUM 2052.

HUM 3521 WORLD RELIGIONS (3 credits). Introduces religion and examines the philosophy of religion. Religion is seen as humanity’s attempt to grapple with the question of the meaning of life, the forms that religious perspectives have taken and the universal aspects of human existence. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3551 SURVEY OF ANCIENT AND MEDIEVAL PHILOSOPHY (3 credits). Surveys the history of philosophy from its beginnings with the pre-Socratic Greeks up through its influence on Christian scholasticism in the Middle Ages. Covers the sweep of intellectual history from Thales to Thomas. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3552 SURVEY OF MODERN AND CONTEMPORARY PHILOSOPHY (3 credits). Surveys philosophy beginning with the Renaissance rise of science. Follows rationalism and empiricism, the philosophies of Kant, Hegel and Marx, and concludes with the two main modernist strains of the 20th century: analytic philosophy and existentialism. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 3585 SPECIAL TOPICS IN PHILOSOPHY (3 credits). Studies a particular period, movement, or individual philosopher or religious figure. Topics announced prior to registration. (HU) Prerequisites: HUM 2051, HUM 2052.

HUM 4100 SENIOR CAPSTONE PROJECT (3 credits). A project consisting of original research that will result in a substantial written work about a significant issue in the humanities. Serves as the culmination of a humanities major’s undergraduate program. (Requirement: Senior standing and department head approval.) (HU) (Q) Prerequisites: ECE 1551 or HUM 2510.

HUM 5020 THE ROOTS OF RHETORIC: CLASSICAL AND HISTORICAL PERSPECTIVES (3 credits). Includes a study of the origins and principles of rhetoric from ancient Greece through the 14th century. Special emphasis is placed on major texts, historical figures, central issues and analytical aspects of the discipline.

HUM 5510 RECENT ISSUES IN LOGIC (3 credits). Introduces the many competing systems of logic recently developed and advocated. Also addresses the debate inspired by logical pluralism. (Requirement: Prerequisite course or instructor approval.) Prerequisites: ECE 1551 or HUM 2510.

HUM 5520 THE ROOTS OF RHETORIC: CLASSICAL AND HISTORICAL PERSPECTIVES (3 credits). Includes a study of the origins and principles of rhetoric from ancient Greece through the 14th century. Special emphasis is placed on major texts, historical figures, central issues and analytical aspects of the discipline.

HUM 5550 RECENT ISSUES IN LOGIC (3 credits). Introduces non-classical systems including modal, intuitionistic, many-valued, fuzzy, paraconsistent and non-monotonic logics. Also addresses applications for these logics and the logical pluralism debate. Prerequisites: HUM 2510.

INTERDISCIPLINARY STUDY
IDS 1010 COMMUNITY SERVICE (1 credit). Fosters the development of self-reflective, culturally aware and responsible community participants through a community service volunteer experience. Requires reflective writing and discussions, and assigned readings.

INTERDISCIPLINARY SCIENCE
ISC 1500 INTRODUCTION TO SUSTAINABILITY (3 credits). Uses lectures, reading and discussions to explore the biological, environmental, economic, technological, humanistic and social science aspects of sustainable resource use and development.

ISC 2501 SCIENTIFIC DIVING TECHNIQUES AND CERTIFICATION (3 credits). Provides training in underwater research techniques and certification by American Academy of Underwater Sciences upon completion. Includes health and safety certifications required by AAUS, lectures and 12 science training dives. (Requirements: Prerequisite course or Basic Open Water Dive certification and AAUS-approved medical examination.) Prerequisites: PED 1154.

ISC 4000 APPLIED SUSTAINABILITY (3 credits). Requires the design, production and presentation of an individual or group project on improving the sustainable operation of some aspect of the Florida Tech main campus, Florida Tech satellite location or another approved location. (Requirement: Permission of the instructor.) Prerequisites: ISC 1500.

ISC 5016 PRESENTING SCIENCE (3 credits). Introduces the principles and practices of presenting research findings. Focuses on effective methods of communicating scientific and technological discoveries in readily understandable and useful ways. Emphasizes techniques for communicating complex scientific principles and research outcomes to the general public.

ISC 5200 PROFESSIONAL INTERDISCIPLINARY SCIENCE MASTER’S SEMINAR (1 credit). Exposes students to a broad range of topics from STEM, business, government and nonprofit sectors. Discusses the challenges of these topics during weekly informational seminars. Includes possible report presentations of student internship and research projects from groups/teams. (Requirement: Program chair approval.)

LANGUAGES AND LINGUISTICS
LNG 1101 ELEMENTARY FRENCH 1 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in French and French culture. Native speakers may not take this course. (HU/SS)

LNG 1102 ELEMENTARY FRENCH 2 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in French and French culture. Native speakers may not take this course. (HU/SS) Prerequisites: LNG 1101.

LNG 1201 ELEMENTARY GERMAN 1 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in German and German culture. Native speakers may not take this course. (HU/SS)

LNG 1202 ELEMENTARY GERMAN 2 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in German and German culture. Native speakers may not take this course. (HU/SS) Prerequisites: LNG 1201.

LNG 1301 ELEMENTARY SPANISH 1 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in Spanish and Spanish culture. Native speakers may not take this course. (HU/SS) Prerequisites: LNG 1301.

LNG 1302 ELEMENTARY SPANISH 2 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in Spanish and Spanish culture. Native speakers may not take this course. (Requirement: Passing score on the placement exam or prerequisite course.) (HU/SS) Prerequisites: LNG 1301.

LNG 1601 ELEMENTARY ITALIAN 1 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in Italian and Italian culture. Native speakers may not take this course. (HU/SS)

LNG 1602 ELEMENTARY ITALIAN 2 (3 credits). Introduces the four basic language skills (listening, speaking, reading and writing) in Italian and Italian culture. Native speakers may not take this course. (HU/SS) Prerequisites: LNG 1601.

LNG 1701 ELEMENTARY CHINESE LANGUAGE AND CULTURE 1 (3 credits). Introduces Chinese language (Mandarin/Putonghua) and culture. Includes grammar and conversation skills. Native speakers may not take this course. (HU/SS)

LNG 1702 ELEMENTARY CHINESE LANGUAGE AND CULTURE 2 (3 credits). Continues LNG 1701. Provides deeper understanding of Chinese language and culture. Includes constructing terms and phrases from basic characters, expanding vocabulary, understanding grammar and increasing conversational ability, developing reading skills, and writing not only correct but also beautiful characters in the language. (HU/SS) Prerequisites: LNG 1701.

LNG 2101 INTERMEDIATE FRENCH 1 (3 credits). Reviews French grammar, emphasizing conversation and reading assignments from literature and culture at the intermediate level. Native speakers may not take this course. (Requirement: Two years of high school French or prerequisite course.) (HU/SS) Prerequisites: LNG 1102.

LNG 2102 INTERMEDIATE FRENCH 2 (3 credits). Reviews French grammar, emphasizing conversation and reading assignments from literature and culture at the intermediate level. Native speakers may not take this course. (HU/SS) Prerequisites: LNG 2101.

LNG 2201 INTERMEDIATE GERMAN 1 (3 credits). Reviews German grammar, emphasizing conversation and reading assignments from literature and culture. Native speakers may not take this course. (Requirement: Two years of high school German or prerequisite course.) (HU/SS) Prerequisites: LNG 1202.

LNG 2202 INTERMEDIATE GERMAN 2 (3 credits). Reviews German grammar, emphasizing conversation and reading assignments from literature and culture. Native speakers may not take this course. (HU/SS) Prerequisites: LNG 2201.

LNG 2301 INTERMEDIATE SPANISH 1 (3 credits). Reviews Spanish grammar, emphasizing conversation and reading assignments from literature and culture at the intermediate level. Native speakers may not take this course. (Requirement: Two years of high school Spanish, passing score on placement exam or prerequisite course.) (HU/SS) Prerequisites: LNG 1302.
course descriptions 253

lng 2302 intermediate spanish 2 (3 credits). continues a review of spanish grammar, emphasizing conversation and reading assignments from literature and culture. native speakers may not take this course. (requirement: passing score on placement exam or prerequisite course.) (hu/ss) prerequisites: lng 2301 or lng 2302.

lng 3085 special topics in foreign language literature (3 credits). an advanced study of a particular author, a group of authors, a historical literary movement or a literary theme or genre in the original foreign language. topics announced prior to registration. (hu/ss) prerequisites: lng 2102 or lng 2302.

lng 3301 advanced spanish 1 (3 credits). includes selected readings from spanish literature and other timely topics for continued development in reading, writing and speaking skills. (requirement: four years of high school spanish, passing score on placement exam or prerequisite course.) (hu/ss) prerequisites: lng 2302.

lng 3302 advanced spanish 2 (3 credits). includes selected readings from spanish literature and other timely topics for development in reading, writing and speaking skills. (requirement: passing score on placement exam or prerequisite course.) (hu/ss) prerequisites: lng 2302.

lng 3401 general linguistics (3 credits). explores the foundations of human language: phonology, morphology, syntax and semantics. includes current linguistic theory, language universals and the social and biological aspects of language acquisition. (hu/ss)

lng 5210 aspects of language (3 credits). a comprehensive overview of a variety of complex and intricate aspects of language and linguistic science. major topics include sounds and sound patterns (phonology); word formations and their patterns (morphology); sentence structure (syntax); and meaning (semantics).

mechanical and aerospAce engineering

mae 1024 introduction to mechanical engineering (3 credits). provides an overview of the engineering profession and the mechanical engineering discipline. introduces students to engineering problem-solving methodologies and design theory and methodology. a competitive design project motivates the study of engineering graphics, computer-aided design, manufacturing techniques and software tools. (cl)

mae 1025 mechanical engineering practicum 1 (1 credit). students support senior student engineering design team projects by helping to develop design concepts, formalize designs through sketches and drawings, fabricate mechanical components, test component performance and other activities related to the successful completion of design projects. corequisites: mae 1024.

mae 1201 introduction to aerospace engineering (1 credit). provides a broad overview of the aerospace engineering profession through class meetings involving formal lectures and presentations, and site/labatory visits. introduces the concept of aerospace design as a precursor to a competitive freshman design project to be implemented in mae 1202.

mae 1202 aerospace practicum (2 credits). introduces elementary design concepts related to aerodynamics and aerospace structures. includes word processing, spreadsheet analysis, computer-aided design, graphics and documentation. group design projects are planned, analyzed, constructed, tested and reported in lecture and lab settings. (cl)

mae 2024 solids modeling and 3-d mechanical design principles (3 credits). students create geometries in isometric and perspective views, free-form solids and sectioned solids to produce layouts for dimensioning/tolerancing. computer analysis focuses on determining inertial properties and interference checking. prerequisites: mae 1024 or mae 1202.

mae 2025 mechanical engineering practicum 2 (1 credit). continues mae 2024 with a higher level of responsibility and more advanced requirements. prerequisites: mae 1025.

mae 2081 applied mechanics: statics (3 credits). includes the elements of statics in co-planar and three-dimensional systems, equilibrium of particles and rigid bodies; simple structures, centroids and center of gravity; beam shear and bending moment; friction; and virtual work. prerequisites: phy 1001.

mae 2082 applied mechanics: dynamics (3 credits). analyzes kinematics and kinetics of particles, systems of particles, and rigid bodies. discusses absolute and relative motion equations. employs force-mass-acceleration, work-energy and impulse-momentum methods. prerequisites: mae 2081.

mae 2201 aerospace fundamentals (2 credits). introduces the theory and analysis of structures, aerodynamics, propulsion and control. presents the theoretical advancements and continuing developments from a historical perspective by stressing the roles and contributions of pioneers. prerequisites: mae 1202, mth 1002, phy 1001.

mae 3024 computer-aided engineering (3 credits). students generate finite element models from solid geometries, defining load, boundary and constraint conditions, characterizing material properties and optimizing performance. uses computer models to perform stress, stability and dynamic analysis of mechanical components and assemblies. prerequisites: che 3260, mae 2024, mae 3083, mth 3201 or mth 3210.

mae 3025 mechanical engineering practicum 3 (1 credit). continues mae 2025 with a higher level of responsibility and more advanced requirements. prerequisites: mae 2025.

mae 3064 fluid mechanics lab (1 credit). provides a working familiarity with the physical principles, measurement and flow visualization techniques in fluid mechanics. prerequisites: phy 2092. corequisites: mae 3061 or mae 3161.

mae 3083 mechanics of materials (3 credits). stress and strain; mechanical properties of materials; hooke's law; axial, torsion, pure bending and transverse loading of members; transformations of stress and strain; failure criteria; strain measurements; thin-walled pressure vessels; design for strength; energy methods; design for impact; column buckling and stability. prerequisites: mae 2081.

mae 3090 design of machine elements (3 credits). covers the design of basic machine elements with an emphasis on failure prevention. elements include screws, fasteners, connections, welded/brazed joints, springs, bearings, gears, clutches, brakes, couplings, flywheels, flexible mechanical elements and shafts. prerequisites: che 3260, che 3265, mae 3081.

mae 3091 theory of machines (3 credits). kinematics and dynamics of mechanisms, including structural and mobility considerations; graphical, analytical and computer methods for velocities and accelerations in constrained motion; cams and gears; analysis of combined static and dynamic forces arising from uniform and accelerated motion; and dynamic balancing. prerequisites: mae 2082, mth 2201.

mae 3150 aerospace computational techniques (3 credits). focuses on numerical and computational tools and techniques widely used to solve contemporary engineering problems. includes advanced computer programming methodology and introduces analysis software and numerical theory in cfd, fia, matrix inversion, ode solution, root finding, numerical integration and matrix inversion. (requirement: prerequisite courses or instructor approval.) corequisites: cse 1502 or cse 1503, mae 3061 or mae 3161, mae 3083.

mae 3161 fluid mechanics (3 credits). introduces fluid variables; fluid statics; flow kinematics; equations of mass, momentum and energy conservation in both integral and differential formulations; similitude and dimensional analysis; the stress tensor; inviscid and viscous flows; flow in pipes; laminar and turbulent flows. prerequisites: mae 2082, mae 3191, mth 2201.

mae 3162 compressible flow (3 credits). studies high-speed compressible flow in single and boundary-layer theory to the compressible case. also includes normal and oblique shocks; compressible flow in ducts and nozzles; mach waves; prandtl-meyer expansions; method of characteristics; unsteady 1-d flows; and conical flow. prerequisites: mae 3161.

mae 3191 engineering thermodynamics 1 (3 credits). studies the conservation of energy and mass in closed- and open-flow systems. includes the physical properties and equations of state for pure substances; the first and second laws of thermodynamics; and reversible processes and carnot cycle. prerequisites: chm 1101, mth 2001, phy 1001.

mae 3192 engineering thermodynamics 2 (3 credits). practical problems involving power and refrigeration cycles and chemical thermodynamics, the combustion process and compressible flows as examined in applications involving nozzles and blade passages. prerequisites: mae 3191.

mae 3241 aerodynamics and flight mechanics (3 credits). dynamics of frictionless fluid including the effects of unsteadiness and three-dimensionality; tools and rules for the construction of elementary flows about bodies, flows around airfoils and wings in three dimensions. prerequisites: mae 3061 or mae 3161. corequisites: mae 3062 or mae 3162.

mae 3260 experimental aerodynamics (3 credits). offers theory and practice in wind tunnel test techniques, measurements of lift and drag by force balance, pressure distributions and wake surveys, lda, thermal anemometry, computer-based data acquisition and reduction using labview and uncertainty analysis. prerequisites: mae 3061 or mae 3161, mae 3064.

mae 3291 junior design (1 credit). introduces the concepts and methodology of rational aerospace design through interaction with seniors completing their capstone design projects and development of team proposals for capstone design projects that will be implemented during the senior year. (requirement: junior standing.) (q)

mae 4014 control systems (3 credits). stresses both classical and modern control methodologies. includes frequency and time-domain representation of linear systems, stability analysis and design techniques. prerequisites: cee 4991, mth 2201.

mae 4024 mechanical vibrations (3 credits). focuses on both discrete and continuous systems. includes free and forced vibration of single and multiple degrees of freedom systems, and vibration control techniques. prerequisites: mae 2082, mae 3083, mth 3201 or mth 3210.

mae 4071 thermal systems design (3 credits). radiative heat transfer applications in thermal systems. elementary methods of optimization for design. application of thermodynamics, fluid mechanics and heat transfer. equipment fundamentals with emphasis on heat exchanger design and analysis. design projects involving use of software and laboratory experiments. prerequisites: mae 4171.
MAE 4074 HEAT TRANSFER LAB (1 credit). Reinforces the activities associated with MAE 4071 and MAE 4171. Investigates the physics of heat transfer (conduction, convection, radiation) through the use of modern experimental techniques. Prerequisites: MAE 4171.

MAE 4090 ROBOTS AND AUTOMATED MANUFACTURING (3 credits). Includes industrial robots, robot actuators, teaching robots, automated parts handling, robot workcell planning and implementation, numerical control and CAD/CAM, programmable logic controllers and modern rapid prototyping techniques.

MAE 4171 PRINCIPLES OF HEAT TRANSFER (3 credits). Steady state and transient heat convection for one- and multidimensional systems; free and forced convection in both internal and external flows for both laminar and turbulent conditions; boiling and condensation. Introduces radiation properties, blackbody radiation and surface emission. Prerequisites: MAE 3061 or MAE 3161, MTH 3201 or MTH 3210.

MAE 4175 HEATING, VENTILATION AND AIR CONDITIONING (3 credits). Air-vapor mixture properties and psychrometrics, solar radiation in heating and air conditioning applications, heating/cooling load calculations, annual energy consumption, heat generation and cooling processes. Prerequisites: MAE 3192, MAE 4171.

MAE 4190 DESIGN METHODOLOGIES AND PRACTICE (1 credit). Covers engineering ethics and design methodologies with case studies. Presents relevant design projects and case studies by faculty and invited engineers representing local industry. Requires development of a proposal for MAE 4193. (Requirement: Junior standing in mechanical engineering.) (Q) Prerequisites: COM 2223.

MAE 4193 MECHANICAL ENGINEERING DESIGN 1 (3 credits). Student teams complete their design projects. Details of engineering analyses and prototype construction and testing results including sensitivity, optimization and cost analyses are presented and outlined in a written final report. Oral presentations are made to faculty and engineers from participating industry. (Q) Prerequisites: MAE 4193.

MAE 4242 AIRCRAFT STABILITY AND CONTROL (3 credits). Static stability of an airplane in pitch and sideslip; static manual control; general equations of unsteady motion; the stability of structures; stability of controlled motion (lateral and longitudinal), including characteristic motions, their frequencies and their rates of decay. Prerequisites: MAE 3061 or MAE 3161, MTH 4014.

MAE 4250 PHYSICAL PRINCIPLES OF NUCLEAR REACTORS (3 credits). Presents the fundamental physical principles of nuclear reactors. Covers the equivalence of matter and energy, nuclear reactions and radiation, neutron diffusion and slowing-down theory, criticality condition, reactor core, composition, configurations and long-term behavior, reactor kinetics and control. Prerequisites: PHY 2002.

MAE 4260 NUCLEAR REACTOR ENGINEERING (3 credits). Covers the fundamental principles of nuclear reactor design and operation as they pertain to various reactor systems. Prerequisites: MAE 4250, MTH 2201.

MAE 4261 AIR-BREATHING ENGINES (3 credits). Studies the performance analysis and component design of air-breathing engines. Includes ideal and actual cycle analyses, thrust and efficiency considerations, the flows in inlets and diffusers, combustors and nozzles, as well as compressors and turbines. Prerequisites: MAE 3062 or MAE 3162.

MAE 4262 ROCKETS AND MISSION ANALYSIS (3 credits). Deals with performance analysis of rockets, emphasizing chemical rocket propulsion: thrust and specific impulse, mission requirements and rocket staging: solid- and liquid-propellant rockets, and propellants; and orbital mechanics and mission analyses. Prerequisites: MAE 3062 or MAE 3162.

MAE 4263 SPACE FLIGHT MECHANICS (3 credits). Provides understanding of the motion of celestial objects and spacecraft under gravity. Includes analysis of the two-body and restricted three-body problems and orbital transfer using impulsive forces. Also includes designing interplanetary spacecraft trajectories for given specifications. Uses MATLAB for numerical analyses and dynamic simulation. (Requirement: Prerequisite courses or instructor approval.) Prerequisites: MAE 2082, MTH 2201.

MAE 4270 NUCLEAR CRITICALITY AND REACTOR SAFETY (3 credits). Deals with nuclear criticality concerns in the processing, transport and storage of nuclear materials. Also deals with reactor safety systems in reactor operation, fuel storage, transportation and processing. Prerequisites: MAE 4250.

MAE 4280 RADIOLOGICAL ENGINEERING (3 credits). Covers biological effects of radiation, natural and manmade radiation, radiation detection and measurement, radioactive waste, x-rays and radiography, and radiation protection. Prerequisites: MAE 4290.

MAE 4281 AEROSPACE STRUCTURAL DESIGN (3 credits). Bending, shear and torsion of open and closed sections, bending of thin plates, structural instability; stress analysis of aircraft components, introduction to finite element methods, airworthiness and elementary aerelasticity. Stresses design issues in all topics. Prerequisites: MAE 3083, MTH 2201.

MAE 4284 AEROSPACE ENGINEERING STRUCTURES LAB (1 credit). Experimental testing of structures and structural components. Presents a variety of testing methods and uses a variety of materials, including advanced composites. Introduces topics in experimental stress analysis. Emphasizes hands-on involvement by students in all areas. Prerequisites: MAE 3083. Corequisites: MAE 4281.

MAE 4291 AEROSPACE ENGINEERING DESIGN 1 (3 credits). Design of an aircraft, spacecraft or component to meet desired needs. Students are given a simulated request for proposals including a measure of merit and a set of specifications that a satisfactory design must meet. Teams work under faculty supervision to develop a design to best meet these requirements. Students present their designs in written reports at the end of each semester. Lectures, readings and group discussions introduce some of the ethical and legal issues that engineers must face. (Requirement: Senior standing.) (Q) Prerequisites: MAE 4291.

MAE 4292 AEROSPACE ENGINEERING DESIGN 2 (3 credits). Design of an aircraft, spacecraft or component to meet desired needs. Students are given a simulated request for proposals including a measure of merit and a set of specifications that a satisfactory design must meet. Teams work under faculty supervision to develop a design to best meet these requirements. Students present their designs in written reports at the end of each semester. Lectures, readings and group discussions introduce some of the ethical and legal issues that engineers must face. (Q) Prerequisites: MAE 4292.

MAE 4300 INDEPENDENT STUDY IN MECHANICAL ENGINEERING (5 credits). Student/faculty research on topics of mutual interest on an individual basis. The subject matter is topical to mechanical engineering at a level that is commensurate with advanced undergraduate standing. (Requirement: Department head approval.)

MAE 4316 MECHATRONICS (3 credits). Studies microprocessor-based control of electromechanical systems, sensors and actuators, assembly programming, microprocessor architecture, serial/parallel input/output, programmable peripherals, interrupts, signal interfacing, standard interface protocols, analog to digital conversion, real-time control, and design of microprocessor-based systems. (Requirement: Senior standing.)

MAE 4318 INSTRUMENTATION AND MEASUREMENT SYSTEMS (3 credits). Studies the fundamentals of sensors and measurements for engineering applications, and software/hardware tools for development of computer-based instrumentation systems. Includes analog signals, signal conditioning, programming virtual instruments, communication standards, data acquisition and process control. (Requirement: Senior standing.)

MAE 4400 INDEPENDENT STUDY IN AEROSPACE ENGINEERING (3 credits). Research on aerospace engineering topics of mutual interest to students and faculty on an individual basis. May qualify as a technical elective, subject to faculty approval. (Requirement: Department head approval.)

MAE 4500 SPECIAL TOPICS IN MECHANICAL ENGINEERING (3 credits). Faculty presents technical course material on topics of special interest to mechanical engineers. The normal format consists of classroom lectures and assigned readings or projects for the students. May fulfill requirements of a technical elective, subject to faculty approval. (Requirement: Department head approval.)

MAE 4600 SPECIAL TOPICS IN AEROSPACE ENGINEERING (3 credits). Technical material presented by faculty on an irregular basis on topics of special interest to aerospace engineers. May qualify as a technical elective, subject to faculty approval. (Requirement: Department head approval.)

MAE 5050 FINITE ELEMENT FUNDAMENTALS (3 credits). Includes finite element formulation of a continuum, virtual work and energy principles, one- and two-dimensional problems; Ritz method, weighted residuals, time-dependent problems; isoparametric formulations and recent developments utilizing elementary finite element methods and existing software. Prerequisites: MAE 2082, MAE 3083, MTH 2201.

MAE 5060 APPLICATIONS IN FINITE ELEMENT METHODS (3 credits). Emphasizes finite element simulation methods for problems in mechanical design, static solutions; eigenvalue techniques in stability and dynamic analysis; direct and reduced basis formulation of dynamical equations; analyses of structures; use of commercially available software. Prerequisites: MAE 2082, MAE 3083, MTH 2201.

MAE 5110 CONTINUUM MECHANICS (3 credits). Mathematical preliminaries, kinematics of motion, equation of conservation mass, equations for the rates of change of translational momentum, rotational momentum, and energy; the entropy inequality; models of material behavior including the linearly viscous fluid and the linearly elastic solid. Prerequisites: MTH 2001, MTH 2201.
MAE 5130 VISCOUS FLOWS (3 credits). Theory of Navier-Stokes equations; exact solutions for steady and unsteady plane, duct, jet and stagnation point flows; Stokes and Oseen approximations; the Prandtl concept of the boundary layer and similarity solutions Blasius, Hiemenz, Falkner-Skan, Hartree, etc.; approximate solutions for nonsimilar boundary layers.

MAE 5140 EXPERIMENTAL FLUID DYNAMICS (3 credits). Introduces students to test facilities such as wind tunnels and water tanks. Includes measurements of force and pressure distribution on airfoil principles and applications of laser Doppler velocimetry, hot-wire anemometry, flow visualization methods and modern data acquisition systems (LabView). Prerequisites: MAE 5130.

MAE 5150 COMPUTATIONAL FLUID DYNAMICS (3 credits). Elliptic, parabolic and hyperbolic PDEs; finite-difference formulations; explicit and implicit methods, stability analysis; operator splitting, multistep methods; boundary conditions; grid generation techniques; applications involving Euler boundary layer and full Navier-Stokes equations. (Requirement: Graduate standing and instructor approval.) Prerequisites: MTH 3210.

MAE 5160 GAS DYNAMICS (3 credits). Differential conservation equations; one-dimensional steady flows; unsteady wave motion, small perturbations and linearized flows; bodies of revolution, conical flows, and slender body theory; blunt-body flows; three-dimensional supersonic flows; transonic flows; the method of characteristics and numerical computation for supersonic flows; real gas effects. Prerequisites: MAE 5150.

MAE 5180 TURBULENT FLOWS (3 credits). General introduction, isotropic, homogeneous and shear-flow turbulence, transport processes in turbulent flows, wall and free turbulent shear flows, atmospheric turbulence. Prerequisites: MAE 5130.

MAE 5190 SELECTED TOPICS IN FLUID DYNAMICS (3 credits). Selected topics reflecting the current research interests of the faculty and visiting scholars.

MAE 5210 CONDUCTION HEAT TRANSFER (3 credits). Covers conservation of energy in a deformable continuous medium; solution of time-dependent homogeneous heat conduction problems using separation of variables, Duhamel’s method, Green’s function, analytical approximate methods and finite-difference methods; phase-change problems; inverse problem; bio-heat transfer modeling and solution methods. Prerequisites: MAE 4171.

MAE 5220 CONVECTION HEAT TRANSFER (3 credits). Reviews the principle of energy conservation, heat conducting fluid; boundary-layer approximations for large Reynolds’s number; exact and approximate treatment of laminar internal and external forced convection; turbulent forced convection; and buoyancy-induced convection. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MAE 5210.

MAE 5230 RADIATION HEAT TRANSFER (3 credits). Development of radiative properties from electromagnetic theory; theory and analysis of shape factors; enclosure radiation transfer with diffuse-gray and nongray surfaces; and an introduction to radiative transfer within participating media and semitransparent solids. Prerequisites: MAE 4171.

MAE 5240 SOLAR ENERGY ANALYSIS (3 credits). Studies solar radiation principles, data estimation and prediction. Reviews heat transfer principles, and radiation and optical properties of surfaces. Includes flat plate solar collector analysis and analysis of concentrating collectors, solar energy storage, and solar heating/air conditioning and refrigeration systems. Prerequisites: MAE 4171.

MAE 5250 PHYSICAL PRINCIPLES OF NUCLEAR REACTORS (3 credits). Presents the fundamental physical principles of nuclear reactors. Covers the equivalence of matter and energy, nuclear reactions and radiation, neutron diffusion and slowing-down theory, criticality condition, reactor core, composition, configurations and long-term behavior, reactor kinetics and control. Prerequisites: PHY 2002.

MAE 5260 NUCLEAR REACTOR ENGINEERING (3 credits). Covers the fundamental principles of nuclear reactor design and operation as they pertain to various reactor systems. Prerequisites: MAE 5250, MTH 2201.

MAE 5270 NUCLEAR CRITICALITY AND REACTOR SAFETY (3 credits). Deals with nuclear criticality concerns in the processing, transport and storage of nuclear materials. Also deals with reactor safety systems in reactor operation, fuel storage, transportation and processing. Prerequisites: MAE 5250.

MAE 5280 RADIOLOGICAL ENGINEERING (3 credits). Covers biological effects of radiation, natural and manmade radiation, radiation detection and measurement, radiotracers, x-rays and radiography, and radiation protection. Prerequisites: MAE 5250.

MAE 5290 SELECTED TOPICS IN HEAT TRANSFER AND ENERGY (3 credits). Advanced topics reflecting the current research interests of the faculty and visiting scholars. (Requirement: Instructor approval.)

MAE 5310 COMBUSTION FUNDAMENTALS (3 credits). Includes equilibrium chemical thermodynamics and thermochemistry, chemical kinetics, transport phenomena and conservation equations, Rankine-Hugoniot theory, Chapman-Jouguet waves and detonation and deflagration; diffusion flames and premixed flames; flammability, ignition and quenching. Prerequisites: MAE 3062.

MAE 5318 INSTRUMENTATION AND MEASUREMENT SYSTEMS (3 credits). Studies the fundamentals of sensors and measurements for engineering applications, and software/hardware tools for development of computer-based instrumentation systems. Includes analog signals, signal conditioning, programming virtual instruments, communication standards, data acquisition and process control.

MAE 5320 INTERNAL COMBUSTION ENGINES (3 credits). Investigates the applications of thermodynamic, fluid dynamic and combustion principles to spark- and compression-ignition engines, and direct-injection stratified charge engines; ideal and actual cycle analyses; exhaust emissions, air pollution and control; engine heat transfer, and engine modeling. Prerequisites: MAE 5310.

MAE 5330 GAS TURBINES (3 credits). Introduces characteristics, performance analyses and design methodologies for stationary aircraft gas turbines. Topics include gas turbine cycle analyses, component design of combustors, compressors, turbines and nozzles; fluid dynamics and heat transfer, gas turbine fuels and emissions. Prerequisites: MAE 5310.

MAE 5340 SELECTED TOPICS IN COMBUSTION AND PROPULSION (3 credits). Addresses selected topics reflecting the current research interests of the faculty and visiting scholars. (Requirement: Instructor approval.)

MAE 5410 ELASTICITY (3 credits). Analyzes stress and strain in two and three dimensions, equilibrium, compatibility and constitutive equations, energy methods, flexure, stretching, torsion and contact stress formulations, axially symmetric problems. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 5201.

MAE 5420 ADVANCED MECHANICAL DESIGN (3 credits). Covers essential aspects of elasticity-plasticity, kinematics, dynamics, tribology and materials science. Prerequisites: MAE 4024, MAE 4194 or MAE 4292.

MAE 5430 DESIGN OF AEROSPACE STRUCTURES (3 credits). Applications of mechanics to lightweight structures. Considers designing with monolithic and advanced composite materials; stiffened shell structures; buckling instability; failure analysis; variable section beams subjected to nonuniform loads; and computer formulations used in solving structural problems. Prerequisites: MAE 4281.

MAE 5450 FRACTURE MECHANICS AND FATIGUE OF MATERIALS (3 credits). Static and dynamic design and maintenance to prevent structural failure; presence of cracks, stress intensity factor, linear elastic and elastic-plastic fracture mechanics, fracture tests, fatigue crack initiation and propagation, environmental and corrosion effects, fatigue life prediction. Prerequisites: CHE 3260, CHE 3265, MAE 3083.

MAE 5470 PRINCIPLES OF COMPOSITE MATERIALS (3 credits). Particulate and fiber composites; forms, properties and processing of constituent materials; manufacture of composites, interaction of constituents, micro- and macro-mechanics and design of composite materials; stress-strain tensors and their transformation; laminate theory of orthotropic materials; strength properties. Prerequisites: MAE 4024, MAE 4194 or MAE 4292.

MAE 5480 STRUCTURAL DYNAMICS (3 credits). Principles of dynamics applied to structural analysis, analysis of continuous media and discretized models, free vibration and forced response of structures, modal analysis, energy methods and approximate methods, applications in structural design and experimentation.

MAE 5486 CRASHWORTHINESS (3 credits). Introduces the design of vehicles to protect occupants during collision. Includes trauma biomechanics, crash mechanics, structural crashworthiness, computer simulation of occupant motion and dynamic structural behavior. Draws examples from aeronautical and automotive applications. (Requirement: Instructor approval.)

MAE 5490 SELECTED TOPICS IN SOLID MECHANICS, STRUCTURES AND MATERIALS (3 credits). Addresses selected topics reflecting the current research interests of the faculty and visiting scholars.

MAE 5610 ADVANCED DYNAMICS (3 credits). Newtonian and analytical mechanics; rigid-body dynamics, Euler’s equations and spinning bodies; Lagrange’s equations, Routhian and Hamiltonian mechanics, canonical transformations and Hamilton-Jacobi theory; dissipative, gyroscopic and circulatory systems; applications of numerical methods to complex dynamics problems. Prerequisites: MAE 2082.

MAE 5630 MODELING AND SIMULATION OF DYNAMIC SYSTEMS (3 credits). Studies theoretical, experimental and computer methods for characterizing dynamic behavior of various physical systems, including generalized approaches to modeling complex interactions between mechanical, electrical, fluid and thermal systems.

MAE 5640 ADVANCED KINEMATICS (3 credits). Provides a uniform presentation of the mathematical foundations for studying spatial motion. Specific topics include general rigid body motion invariants, instantaneous kinematics, finite position theory, hierarchies and multivectors, screw theory, theory of Clifford Algebras, quaternions and dual quaternions and exponential coordinates.

MAE 5650 ROBOTICS (3 credits). Introduces the study of robotic manipulators. Includes spatial rigid body displacement, Euler angles, Denavit-Hartenberg coordinate convention for kinematic analysis, forward and inverse kinematic analyses of serial and parallel chain manipulators, manipulator Jacobians and trajectory generation.
MAE 5660 ROBOT CONTROL (3 credits). Introduces the control of robotic manipulators. Includes Lyapunov control theory, independent joint control, set point and trajectory tracking control, inverse dynamics control, impedance control, force control, hybrid position/force control and robust control.

MAE 5665 ROBOTICS FOR BIOMEDICAL APPLICATIONS (3 credits). Introduces the design of robotic mechanical systems for biomedical applications. Includes mechanical design of robotic surgical and telesurgery systems and automated surgical assistance devices. Addresses the surgical suite requirements for materials, ergonomics, sterilization, regulation and liability.

MAE 5670 SPATIAL MECHANISM DESIGN (3 credits). Advanced topics in spherical and spatial mechanisms. Approximate motion synthesis and quasi-position synthesis methodologies. Includes analysis techniques with respect to force transmission, order, singularity avoidance and solution branching. Uses computer-aided design and visualization software.

MAE 5690 SELECTED TOPICS IN SYSTEMS AND DYNAMICS (3 credits). Addresses selected topics reflecting the current research interests of the faculty and visiting scholars. (Requirement: Instructor approval.)

MAE 5710 ORTHOPEDIC BIOMECHANICS (3 credits). Introduces the mechanical and structural aspects of the human skeletal system. Includes the analysis and design of orthopedic implants such as hip and knee replacements. Prerequisites: MAE 3083.

MAE 5720 BIOMEDICAL INSTRUMENTATION (3 credits). Includes concepts and techniques of instrumentation in bioengineering. Emphasizes the effects of instrumentation on the biological system under investigation, transducers and couplers, data conversion, conditioning and transmission, and experimental problems in acute and chronic procedures with static and dynamic subjects. Prerequisites: MTH 2201.

MAE 5730 BIOPHOTONICS AND MICROSCOPY (3 credits). Introduces optical phenomena and the optical properties of biological tissue, basic elements of optics and optical sources. Emphasizes lasers in the context of biomedical applications. Also includes engineering principles of various microscopy modalities. Prerequisites: MTH 2201.

MAE 5740 CELLULAR BIOMECHANICS (3 credits). Provides the basic knowledge of cell biology and the basic knowledge of engineering mechanics. Introduces the necessity to study cell mechanics, the various aspects of the study of cell mechanics, and the major results obtained to date in these aspects.

MAE 5790 SELECTED TOPICS IN BIOMEDICAL ENGINEERING (3 credits). Addresses selected topics reflecting the current research interests of the faculty in the field of biomedical engineering. (Requirement: Instructor approval.)

MAE 5890 SELECTED TOPICS IN AUTOMOTIVE ENGINEERING (3 credits). Addresses selected topics reflecting the current state of knowledge and advances made in automotive engineering. Includes research interests of the faculty and visiting scholars. (Requirement: Instructor approval.)

MAE 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

MAE 5900 MAE SEMINAR (0 credits). Presents current research by university faculty, visiting speakers and graduate students. Required of all full-time MAE graduate students.

MAE 5997 INDEPENDENT STUDY (1-3 credits). Individual study under the direction of a member of the MAE graduate faculty.

MAE 5999 THESIS (3-6 credits). Individual work under the direction of a member of the MAE graduate faculty on a selected topic.

MAE 6130 EXPERIMENTAL METHODS IN TURBULENCE (3 credits). Physical description; hot-wire anemometry; correlation and spectrum analysis; fluctuating pressure and shear-stress measurements; use of laser Doppler velocimetry and particle velocimetry for fluid flow measurements; and flow visualization method. Prerequisites: MAE 5140.

MAE 6810 LIFE-CRITICAL SYSTEMS (3 credits). Requires students to develop and evaluate a synthesis of life-critical systems (LCS) illustrated by space systems, aeronautics, nuclear energy systems and various emergency systems. Improves knowledge and skills of the differences between technology-centered and human-centered design of LCS.

MAE 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

MAE 6999 DISSERTATION (3-12 credits). Research and preparation of the doctoral dissertation.

METEOROLOGY

MET 1999 WEATHER BRIEFING (1 credit). Stimulates discussion about recent, current and future weather using various data sources, including satellites, surface observations, radar, model and upper air data. Underlines the importance of the human element in weather forecasting. Students must attend the weekly weather briefing and participate in a national weather forecasting contest. Content varies and course may be repeated for a maximum of three credits.

MET 3401 SYNOPTIC METEOROLOGY 1 (3 credits). Standard meteorological observational practice; data presentation; data analysis and display; data product transmission by facsimile and computer; and Internet connectivity; weather map discussions. Prerequisites: OCN 2407.

MET 3402 SYNOPTIC METEOROLOGY 2 (3 credits). Basic analysis techniques, scalar and vector fields, thermodynamic diagrams, synoptic calculations, 4-dimensional atmospheric structure, weather map discussions. Prerequisites: MET 3401.

MET 4233 REMOTE SENSING FOR METEOROLOGY (3 credits). Studies geostationary (GOES) and low-Earth polar orbiting (NOAA) weather satellites and the sensors system. Presents operational atmospheric data and applications to numerical weather prediction. Also covers ground-based meteorological radar systems and applications. Prerequisites: PHY 2002.

MET 4305 ATMOSPHERIC DYNAMICS 1 (3 credits). Studies coordinate systems, balance of forces, equations of motion, continuity and energy, barotropic and baroclinic disturbances, geostrophy, atmospheric transport of energy. Prerequisites: OCN 2407, OCN 3430.

MET 4306 ATMOSPHERIC DYNAMICS 2 (3 credits). Studies circulation and vorticity, scale analysis, friction and turbulence, sound, gravity and Rossby waves, instability, numerical weather prediction. Prerequisites: MET 4305.

MET 4310 CLIMATOLOGY (3 credits). Studies the distribution of weather elements globally, continental positioning, rain shields, hydrological cycle, meteorological databases, El Nino impacts on humans, global warming and the anthropogenic greenhouse effect. Prerequisites: MTH 2401, OCN 2407.

MET 4407 MARINE METEOROLOGY (3 credits). Applies the basic laws of thermodynamics and geophysical fluid dynamics to the behavior and circulation in the atmosphere and how those laws interact with the ocean. Prerequisites: OCN 2407. Corequisites: OCN 3401.

MET 4410 MESOSCALE METEOROLOGY (3 credits). Surveys conceptual models and analyzes techniques for mesoscale phenomena. Includes mesoscale convective complexes, severe storms, atmospheric instability, mesoscale gravity waves, squall lines, drylines, topographic effects, mesoscale clouds and precipitation processes, coastal showers, the sea breeze and other local phenomena. Prerequisites: OCN 2407.

MET 5001 PRINCIPLES OF ATMOSPHERIC SCIENCE (3 credits). Surveys the atmosphere, atmospheric thermodynamics, extratropical disturbances, cloud physics, storms, radiative transfer, global energy balance, atmospheric dynamics, the general circulation.

MET 5233 ATMOSPHERIC REMOTE SENSING (3 credits). Nature of radiation, blackbody radiation laws, Maxwell’s equations, radar equation, radiative transfer equation, inversion techniques. Applications from surface, aircraft and spacecraft observations using Doppler, Lidar, visible, infrared and microwave systems to infer synoptic atmospheric properties. Prerequisites: PHY 2002.

MET 5301 PLANETARY BOUNDARY LAYER (3 credits). Surveys boundary layer meteorology. Explores the fundamental concepts of planetary boundary layers (PBL). Includes turbulence, Reynolds averaging, scaling laws, instrumentation for PBL experiments and the application of theory in the atmospheric boundary and forecast models. (Requirement: Prerequisite course or instructor approval.) Prerequisites: MET 4305.

MET 5305 DYNAMIC METEOROLOGY 1 (3 credits). Dynamics of atmosphere including coordinate systems, balance of forces, derivation of the equations of motion, continuity and energy; barotropic and baroclinic disturbances; geostrophy; and atmospheric transport of energy. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 2201, OCN 2407.

MET 5306 DYNAMIC METEOROLOGY 2 (3 credits). Dynamics of the atmosphere including theorems on circulation and vorticity; scale analysis; friction and turbulence; sound, gravity and Rossby waves, instability; numerical weather prediction. Prerequisites: MET 5305.

MET 5310 NUMERICAL WEATHER PREDICTION (3 credits). Covers the physical and mathematical basis of numerical weather prediction; numerical methods and computational stabilities; modern operational and research forecast models. Includes a virtual laboratory with applications of simple-to-complex dynamical models and a team project. Prerequisites: MET 3402, MET 4305.
MGT 5000 FINANCIAL ACCOUNTING (3 credits). Studies accounting concepts, the accounting model, measurement processes, financial statements, financial analysis, the accounting cycle, monetary and fixed assets, inventory, current and long-term liabilities, and equity structures of partnerships, proprietorships and corporations.

MGT 5001 MANAGERIAL ACCOUNTING (3 credits). Focuses on internal reporting to managers for use in planning and control, making nonroutine decisions and formulating major plans and policies. Includes cost-volume-profit relationships, flexible budgets and standards, job order and process cost, and cost allocation and accumulation. Prerequisites: MGT 5000.

MGT 5002 CORPORATE FINANCE (3 credits). Covers concepts and tools of corporate financial management including corporate financial planning, forecasting, budgeting, quantitative techniques and practices. Considers the importance of ethics and the international aspects in financial decision-making. Prerequisites: MGT 5000.

MGT 5003 PUBLIC FINANCE (3 credits). Covers concepts and methods of financial management in federal, state and local governments including the analysis of the theory and practice of public finance through taxation, debt instruments, intergovernmental funds and other revenue sources. Reviews financial planning, forecasting, budgeting and financial management practices. Prerequisites: MGT 5000.

MGT 5006 INTRODUCTORY MANAGERIAL STATISTICS (3 credits). Studies methods of collecting, analyzing and interpreting data for managerial decision making. Includes data presentation, measures of central tendency, dispersion and skewness; discrete and continuous probability distributions; sampling methods and sampling distributions; and confidence interval estimation of parameters and tests of hypotheses.

MGT 5007 INTERMEDIATE MANAGERIAL STATISTICS (3 credits). Applies statistical theory to managerial problems, particularly methods of statistical inference for management decision making. Includes F- and Chi-square distributions, nonparametric tests, analysis of variance, regression and correlation analysis. Prerequisites: MGT 5006.

MGT 5008 FINANCE SEMINAR (3 credits). Discusses advanced topics in finance including current activity, and financial tools and strategy. Blends financial theory with current practices in finance. Prerequisites: MGT 5002.

MGT 5010 SEMINAR IN RESEARCH METHODOLOGY (3 credits). Reviews research methods in managerial disciplines. Includes nature and sources of secondary data, primary data collection techniques, design of research projects, sample selection, model building, etc. Requires a research proposal and presentation of a fully documented research report on the results of the study.

MGT 5011 MANAGEMENT THEORY AND THOUGHT (3 credits). Overviews classical and contemporary management philosophies and theories. Focuses on managing enterprises in a rapidly changing global economy. Includes developing strategic vision, planning, organizing, directing and controlling, social responsibility and international management.

MGT 5013 ORGANIZATIONAL BEHAVIOR (3 credits). Covers the contributions to management theory made by the behavioral sciences. Gives a better understanding of the human being and why he acts as he does. Studies individual and group behavior. Extensively uses current periodicals and case material.

MGT 5014 INFORMATION SYSTEMS (3 credits). Studies information systems design associated with business organizations. Includes development life cycles, requirements analysis, systems design and performance considerations. Views information systems as strategic tools to provide competitive advantage.

MGT 5015 ORGANIZATIONAL PLANNING AND DEVELOPMENT (3 credits). Studies the concepts, theory, research and operational problems of modern organizations. Includes classical and modern organizational theory, emphasizing the latter. Covers recent research findings and the theory of human relations in industry. Involves students in case studies.

MGT 5016 EMPLOYEE RELATIONS (3 credits). Analyzes, synthesizes and evaluates the major federal and state laws that impinge on the modern work environment. Explores the impact of technology on the legal system and social organization, origin and development of labor law, contract negotiations, union organization, collective bargaining, grievances, dispute resolution and other methods in the context of federal, state and local government applications. Includes case studies to reinforce the practical application of evaluation techniques in public sector organizations. As program capstone, requires significant research activity.

MGT 5017 PROGRAM MANAGEMENT (3 credits). Addresses responsibility and authority of a program manager and the integration of program functions in complex organizational structures. Discusses interpersonal relationships within matrix organizations, as well as program conflict resolution and organizational priorities.

MGT 5018 POLICY AND STRATEGY FOR BUSINESS (3 credits). Covers the formulation and implementation of competitive strategies, emphasizing the role of top management. Emphasizes case analyses to explore the multifunctional nature of decision-making at the top management level. Recommended for the graduating semester. May serve as the capstone for certain majors. Prerequisites: MGT 5002, MGT 5019.

MGT 5019 MARKETING (3 credits). Approaches the marketing function from the point of view of the marketing manager. Examines the role of marketing in the firm, the economy and society. Introduces marketing concepts and operational approaches for marketing decision-making. Employs the case method to apply theory to the development of a marketing mix.

MGT 5020 APPLIED MANAGEMENT PROJECT (3 credits). Covers concepts, tools and techniques for evaluation of research proposals and studies. Involves designing, conducting, evaluating and presenting oral and written forms of research. Assignments build on quantitative and qualitative research methods. Recommended for the graduating semester. May serve as the capstone for certain majors.

MGT 5021 BUSINESS LAW (3 credits). Studies how to understand, analyze and effectively deal with issues such as jurisprudence, contracts, property, agency, partnerships, corporations, sales, commercial paper and secured transactions. Also studies aspects of the Uniform Commercial Code.

MGT 5022 ANALYTICAL METHODS FOR MANAGEMENT (3 credits). Introduces the fundamental concepts in business mathematics. Includes linear systems, linear programming (graphical method), matrices and logarithms; and differential calculus and its applications. Noncredit for graduate management programs except to meet foundation requirements.

MGT 5023 MANAGEMENT AND ADMINISTRATION OF CONTRACTS (3 credits). Offers a comprehensive analysis of the procurement process and the resulting contractual relationships. Topics range from a history of procurement through considerations dealing with applicable laws, policies, regulations, methods of contracting, types of contracts and cost-pricing principles.

MGT 5024 PRODUCTION AND OPERATIONS MANAGEMENT (3 credits). Introduces the translation of product and service requirements into facilities, procedures and operating organizations. Includes product design, production alternatives, facilities location and layout, resource requirements planning and quality control.

MGT 5031 SEMINAR IN INTERNATIONAL MANAGEMENT (3 credits). Focuses on the problems of the senior executive in the management of the multinational firm. Examines executive decision making within the scope of international concerns relative to various economic, political and cultural environments.

MGT 5033 HUMAN RESOURCES MANAGEMENT (3 credits). Explores issues surrounding the employment of human resources in various organizational settings using lectures/guided discussions and case studies. Includes recruitment, selection, job analyses/evaluation, equal employment opportunity, training/development, compensation/benefits, appraisal, labor relations, health and safety, and separation/retirement.

MGT 5034 LAW, TECHNOLOGY AND SOCIETY (3 credits). Critically examines the impact of technology on the legal system and social organization, origin and methodology of the common law. Provides a framework for analyzing social change caused by advancing technology. Analyzes legal concepts from the standpoint of societal reaction to technology. Uses the case study method.

MGT 5035 PUBLIC ADMINISTRATION AND MANAGEMENT (3 credits). Focuses on the problems of administrative management in public agencies and presents methods and strategies to remedy administrative management problems. Uses case studies to apply principles of effective public administrative management.

MGT 5037 GLOBAL ECONOMIC ENVIRONMENT OF BUSINESS (3 credits). Focuses on the importance and impact of foreign trade for the world economies. Emphasizes balance of trade, technology transfer and service economies, and trade barriers, GATT, NAFTA, the World Bank and other issues related to global trade. Prerequisites: MGT 5149.

MGT 5040 PUBLIC PROGRAM POLICY AND EVALUATION (3 credits). Provides techniques for evaluating public policies and programs. Discusses analytical and other methods in the context of federal, state and local government applications. Includes case studies to reinforce the practical application of evaluation techniques in public sector organizations. As program capstone, requires significant research activity.

MGT 5042 INTERNATIONAL BUSINESS (3 credits). Addresses world environments and specific international business activities such as foreign investment and international marketing. Examines the decision-making process for going abroad, along with current issues in international business. Prerequisites: MGT 5002, MGT 5019.

MGT 5043 LAW AND POLITICS OF INTERNATIONAL CONFLICT MANAGEMENT (3 credits). Examines the legal, political and policy issues involved in international intervention in conflict and its historical background. Explores legal doctrine, official policy and political practice in conflict intervention. Also covers prevention and post-conflict recovery. Includes themes that deal with the continuum from war to peace.

MGT 5044 ROLE OF FOREIGN RELATIONS AND NATIONAL SECURITY LAW (3 credits). Addresses the interrelationship of international and U.S. constitutional law. Focuses on separation of powers, decision-making authority; international law as part of U.S. law; treaties and other international agreements; war power and terrorism; appropriations power; federalism; the role of the courts; and current national security issues.
MGT 5045 INFORMATION SYSTEMS FOR COMPLEX EMERGENCIES (3 credits). Addresses the use of information technology systems (ITS) and communications systems in a crisis operational environment. Includes legal and regulatory systems and interface with public safety/emergency agencies.

MGT 5046 ORGANIZATIONAL BEHAVIOR IN HUMANITARIAN AND DISASTER OPERATIONS (3 credits). Covers the contribution to management theory made by the behavioral sciences. Studies human behavior of groups and individuals. Includes not-for-profit and volunteer personnel systems. Extensively uses current periodicals and case materials.

MGT 5047 NEW VENTURE DEVELOPMENT (3 credits). Introduces the new venture development process, including all the steps in the process, the behaviors and characteristics of entrepreneurs, creating the business concept, the business plan, financing and growth management. Prerequisites: MGT 5002, MGT 5019.

MGT 5048 MARKETING ANALYSIS AND STRATEGY (3 credits). Includes advanced analysis of current marketing opportunities and problems stemming from the changing social, economic and political environments. Entails preparation of detailed marketing programs for all or part of an organization’s marketing effort, consistent with its financial and managerial resources. Prerequisites: MGT 5019.

MGT 5049 INTERNATIONAL MARKETING (3 credits). Studies formulation of marketing strategies and techniques within the framework of the world marketplace. Examines and adapts fundamental marketing concepts to various economic, cultural, political, legal and business environments. Prerequisites: MGT 5000, MGT 5019.

MGT 5050 ADVANCED INTERNATIONAL MARKETING (3 credits). Covers the environment of international marketing and the need for organization marketing on a global basis. Includes some economic, social, political, cultural and legal dimensions of marketing concepts. Includes emerging issues that create new problems and opportunities for international marketing managers. Prerequisites: MGT 5019.

MGT 5051 LOGISTICS CHAIN MANAGEMENT IN HUMANITARIAN AND DISASTER RELIEF (3 credits). Combines lectures and class discussion on assigned topics and case analyses. Includes the role of logistics chain management in the economy and organizations; inventory; global logistics; effective organizing; packaging and purchasing; and materials flow and handling. Also includes the implementation of logistics chain management strategy.

MGT 5052 PLANNING AND MODELING FOR EMERGENCY OPERATIONS AND DISASTER RELIEF (3 credits). Applies case analysis and modeling tools to a disaster and emergency assistance environment. Discusses systems analysis and constructs computer models. Includes system classification, problem formulation, decision/risk analysis, modeling techniques, discrete event simulation and evaluation of information. Requires a design project. (Requirement: Prerequisite course or equivalent.) Prerequisites: MGT 5006.

MGT 5053 PROJECT AND PROGRAM RISK MITIGATION (3 credits). Includes a systematic approach to risk management from project initiation through planning, implementation, control and closeout. Discusses various techniques and models for qualitative/quantitative risk assessment and risk management in such areas as post-scheduling and outputs. (Requirement: Prerequisite courses or permission of the instructor.) Prerequisites: MGT 5006, MGT 5017.

MGT 5060 MANAGEMENT OF ASSETS (3 credits). Includes determination of requirements for management of major and secondary items. Reviews the needs and techniques for accurate asset reporting and analysis of demand data for customers’ requirements. Emphasizes problems related to unstable items and management methods required to integrate asset acquisition and management into the life cycle program.

MGT 5061 SYSTEMS AND LOGISTICS SUPPORT MANAGEMENT (3 credits). Addresses the management of evolving systems. Emphasizes planning and support requirements of the system during its life cycle. Includes maintenance planning, physical distribution, manpower requirements, facilities and equipment needs, documentation, systems integration and other support requirements.

MGT 5062 LOGISTICS POLICY (3 credits). Analyzes logistics as a science and provides a comparative analysis of different policy considerations. Reviews the role of logistics in organizational policy and problems, and future trends in logistics. Involves a significant research paper or challenging capstone project designed to demonstrate mastery over the complete curriculum.

MGT 5063 INVENTORY CONTROL AND MANAGEMENT (3 credits). Includes management techniques and methods related to the life cycle management of material. Addresses material management systems and concepts of standardization, modernization, material reserve, cataloguing, pro-ordering, storage and distribution.

MGT 5064 COST AND ECONOMIC ANALYSIS (3 credits). Covers cost effectiveness, trade-off analysis, system effectiveness model structure, criteria for evaluation of alternative systems, principles of cost accounting and cost estimating for system life cycle. Includes basic math for cost-effective analysis, computer tools for economic modeling and risk assessment. Prerequisites: MGT 5006.

MGT 5065 SUPPLY CHAIN MANAGEMENT (3 credits). Combines lectures, class discussions on assigned topics and case analyses. Includes the role of SCM in the economy and organizations; customer service; SCM information systems; inventory management and planning; flow and handling; transportation; warehousing, computerization and packaging issues; purchasing; global logistics; organizing for effective SCM; methods to control SCM performance; and implementing SCM strategy.

MGT 5066 SYSTEMS ANALYSIS AND MODELING (3 credits). Applies case analysis and modeling tools to a business environment. Discusses systems analysis and constructs computer models. Includes system classification, problem formulation, decision/risk analysis, modeling techniques, discrete event simulation and evaluation of information. Requires a design project. Prerequisites: MGT 5006.

MGT 5067 SYSTEM MANAGEMENT (3 credits). Includes systems science and general system theory, strategic concepts and process management; systematic decision-making and technical disciplines; and communications theory. Recommended for the graduating semester. May serve as the capstone for certain majors.

MGT 5068 SYSTEM ENGINEERING MANAGEMENT (3 credits). Includes system technical management concepts and methods as applied to the management of system engineering activities. Covers the general principles and requirements of system engineering and application of system management techniques to manage multidisciplinary teams engaged in development programs. Prerequisites: MGT 5067.

MGT 5069 ADVANCED TECHNIQUES IN SUPPLY CHAIN MANAGEMENT (3 credits). Covers advanced theory and practice of supply chain management including operational and logistics support. Provides an understanding of strategy, organizational structure and new technologies in SCM. Includes the Internet and its effect on SCM, and the concepts and tools used in SCM. Examines requirements, specifications, planning, program design, and maintenance and quality assurance of SCM systems. Prerequisites: MGT 5065.

MGT 5070 SPECIAL TOPICS IN BUSINESS (3 credits). Independent study with a faculty member in some area of business in greater depth than is normally possible in a regular class. Requires a comprehensive term paper.

MGT 5071 DECISION THEORY (3 credits). Examines the normative and empirical dimensions of judgment analysis. Introduces the use of management science techniques and mathematical modeling as a methodology for understanding and facilitating the decision-making process. Prerequisites: MGT 5006.

MGT 5079 TRAFFIC MANAGEMENT (3 credits). Examines the various means of directing, controlling and supervising functions involved in furnishing transportation services and facilities. Examines in detail service support to the customer and the principles and problems involved.

MGT 5084 MATERIEL ACQUISITION MANAGEMENT (3 credits). Examines the life cycle process of acquisition of materiel and materiel systems. Examines systems management and its application from acquisition to termination. Studies need requirements, cost and schedule considerations and procurement procedures. May serve as the capstone for certain majors.

MGT 5087 MANAGEMENT OF TRANSPORTATION SYSTEMS (3 credits). Studies various contemporary carrier modes, emphasizing management problems common to all modes of domestic and international transportation. Investigates and discusses transportation engineering, use of transportation facilities and materiel, and economic, personnel, labor and union aspects.

MGT 5088 PROJECT AND PROGRAM RISK MANAGEMENT (3 credits). Systematically approaches risk management from project initiation to project planning, implementation, control and closeout. Discusses various techniques and models for qualitative/quantitative risk assessment and risk management in areas such as cost, schedule and outputs. Prerequisites: MGT 5006, MGT 5017.

MGT 5089 MULTIPLE PROJECT MANAGEMENT (3 credits). Examines alternative methods to plan, schedule and control multi-projects within an organizational setting. Includes the role of multiple projects within an organization and the impact on conventional day-to-day workflow. Prerequisites: MGT 5017.

MGT 5090 PRACTICUM FOR PROJECT MANAGEMENT (3 credits). Formulates and applies the knowledge of project management in an integrative fashion within a project team environment. Requires a written project plan and a significant research paper or challenging project. May serve as the capstone for certain majors. Prerequisites: MGT 5088, MGT 5089.

MGT 5091 RESEARCH SEMINAR IN MANAGEMENT I (1 credit). Independent study with a faculty member in some area of management in greater depth than is normally possible in a regular class. Requires a comprehensive term paper.

MGT 5092 RESEARCH SEMINAR IN MANAGEMENT II (2 credits). Independent study with a faculty member in some area of management in greater depth than is normally possible in a regular class. Requires a comprehensive term paper.
MGT 5093 PRACTICUM OF QUALITY MANAGEMENT (3 credits). Formulates and applies the knowledge and skills of quality management principles and practices in an integrative fashion within a project environment. Requires a written quality project plan. Involves a significant research paper or challenging capstone project designed to demonstrate mastery over the complete curriculum. Prerequisites: MGT 5024, MGT 5088, MGT 5131.

MGT 5100 DISTRIBUTION MANAGEMENT (3 credits). Distribution systems and management from a cost vs. return view. U.S. and world transportation systems' impact on distribution centers, automated order processing, warehousing techniques and layout, organization for physical distribution management, total systems approach, government regulation, distribution components and management of distribution resources.

MGT 5101 LEADERSHIP THEORY AND EFFECTIVE MANAGEMENT (3 credits). Introduces and examines historical development of leadership theory and supporting research. Considers past and contemporary theory in self-analysis by students to define their own leadership styles. Prerequisites: MGT 5013.

MGT 5105 INTERPERSONAL RELATIONS AND CONFLICT RESOLUTION (3 credits). Covers interpersonal behavior in two-person relationships, emphasizing interpersonal communication and conflict resolution. Also covers group processes, development and how group norms and culture influence interpersonal relationships. Prerequisites: MGT 5101.

MGT 5106 ORGANIZATIONAL COMMUNICATION (3 credits). Includes basic communication theory and the effects of communication on human behavior and organizational effectiveness. Provides a basic understanding of organizational communication theory. Uses case studies and experiential exercises to improve communications skills.

MGT 5112 SEMINAR IN CONTEMPORARY ISSUES IN HUMAN RESOURCES MANAGEMENT (3 credits). Surveys significant socio-political, legal, technological and economic issues in contemporary organizations and member work-life quality. Uses current and personal experiences within organizations. May serve as the capstone for certain majors. Prerequisites: MGT 5033.

MGT 5113 PROJECT MANAGEMENT FOR INFORMATION TECHNOLOGY (3 credits). Examines the components and management process of complex projects from the information technology (IT) perspective. Introduces project management tools and techniques useful to the IT professional. Studies the formation and leadership requirements of project management.

MGT 5114 INTRODUCTION TO INFORMATION SECURITY MANAGEMENT (3 credits). Examines the fundamental principles of computer security as applied to information technology (IT). Covers foundations, psychology, prevention, detection, human factors, technical considerations, management processes and future considerations for the security of information technology.

MGT 5115 GLOBAL INFORMATION TECHNOLOGY MANAGEMENT (3 credits). Covers theory, development and impacts of national and international policy on information technology (IT). Explores how frequent shifts in public policy require IT businesses to adjust rapidly to adhere to regulations. Requires development of sophisticated strategies including new technologies, global transfer and analysis to be able to adapt to the changing environment.

MGT 5119 ACCOUNTING FOR NONPROFIT ENTITIES (3 credits). Covers accounting systems employed by universities and other nonprofit entities. Includes fund accounting used by municipalities and county, state and federal government, and financial management cycle from planning through evaluation. Prerequisites: MGT 5001.

MGT 5131 PRODUCTIVITY MEASUREMENT AND IMPROVEMENT (3 credits). Covers the productivity and quality improvement process, organizing for successful implementation of the Deming philosophy, organizational structure and implementing teams. Includes productivity, profit and quality, organizational anxieties, measurement problems, partial/full firm productivity, JIT and TQM. Prerequisites: MGT 5006.

MGT 5132 BASIC ECONOMICS (3 credits). Covers market forces of supply and demand, concept of utility, firm and production, production function and costs of production, and various market structures. Introduces macroeconomics, the issues of aggregation, circular flow model, monetary sector and the government stabilization policies.

MGT 5133 ADVANCED ANALYTICAL METHODS FOR MANAGEMENT (3 credits). Quantitative models using management science, operations research and decision science techniques with business applications. Includes linear and integer linear programming (graphical and simplex methods), inventory models, queuing models and Markov processes. Prerequisites: MGT 5006, MGT 5022.

MGT 5134 COMMERCIAL ENTERPRISE IN SPACE (3 credits). Includes economic considerations of space processing and Earth resources observation; history of in-space experimentation and development; definition of Earth's orbital environment and its attendant commercial advantages; launch operations and landing/retrieval; financial/profit considerations of operating in space; and current commercial space opportunities and risks.

MGT 5136 INVESTMENT ANALYSIS (3 credits). Includes portfolio design, analysis and management including the Markowitz approach to portfolio design, the simplified model of William Sharpe; and the capital asset pricing model. Covers the management of bond and equity portfolios, portfolio optimization, arbitrage and hedging techniques. Prerequisites: MGT 5002, MGT 5006.

MGT 5137 THE MANAGEMENT OF ENGINEERING AND TECHNOLOGY (3 credits). Explores relationships between technology, innovation, management and business operations. Studies technology strategy in terms of the discovery-product-market path. Relates the management functions of planning, organizing and controlling to life cycles. Uses case studies.

MGT 5138 BUSINESS ETHICS (3 credits). Covers concepts of moral philosophy and their relevance to decision making, and applies this understanding in a wide variety of practical management settings. Extensively uses case analyses.

MGT 5140 INTERNATIONAL FINANCE (3 credits). Covers international financial systems and methods needed to adapt to the international setting. Includes international and monetary system, foreign exchange markets and international trade, international accounting and taxation, foreign direct financial investment, international capital markets, multinational capital budgeting, exchange exposure and risk management. Prerequisites: MGT 5002.

MGT 5141 IMPLEMENTING STATISTICAL PROCESS CONTROL (3 credits). Implements an overall SPC program, emphasizing how to manage a process throughout the entire organization with the aid of tools and methods for the improvement of quality. Includes how to target processes for SPC, conduct process capability studies and maintain ongoing process control. Prerequisites: MGT 5006.

MGT 5142 BUSINESS, GOVERNMENT AND PUBLIC POLICY (3 credits). Covers the legal basis of the relationship of business and government, dimensions of federal regulation of business through Congressional action, administrative oversight by executive department agencies, regulatory power of independent agencies (Federal Reserve, SEC and FTC) and importance of political action committees in the influencing of public policy.

MGT 5145 TECHNOLOGY AND BUSINESS STRATEGY (3 credits). Focusses on the process of developing a technology strategy and integrating it with business strategy. Involves technology situation analysis, technology portfolio development, technology and corporate strategy integration and establishing technology investment priorities. Extensively uses case studies.

MGT 5146 MANAGEMENT OF INNOVATION (3 credits). Considers innovation in a historical context, organizing organizational culture and innovation, managing cross-functional teams, venturing and organization learning, intra- and entrepreneur- ship, managing R&D resources, executive leadership and the management of innovation and change, and designing innovative organizations. Prerequisites: MGT 5013.

MGT 5148 DESIGN AND ANALYSIS OF EXPERIMENTS (3 credits). Covers productivity measurement and improvement and quantitative methods used in the management of technology. Includes analysis of means, multifactor analysis of variance, factorial experiments and orthogonal arrays, including personal computer software applications for the design and analysis of experiments. Prerequisites: MGT 5007.

MGT 5149 ECONOMICS FOR BUSINESS (3 credits). Covers advanced economics including economic modeling and forecasting; economic efficiency and allocation of resources in product markets and the public sector; macroeconomics; and open economy, foreign exchange and international trade. Prerequisites: MGT 5006, MGT 5022, MGT 5132.

MGT 5150 MANAGEMENT OF SOFTWARE SYSTEMS (3 credits). Explores management's consideration of functional requirement specifications, design, development, implementation and maintenance of computer-based software systems that provide information technology-related services to organizations. (Requirement: Prerequisite course or equivalent.) Prerequisites: MGT 5014.

MGT 5151 DATABASE SYSTEMS MANAGEMENT (3 credits). Investigates how database management system techniques are used to design, develop, implement and maintain modern database applications in organizations. (Requirement: Prerequisite course or equivalent.) Prerequisites: MGT 5014.

MGT 5152 COMPUTER SYSTEMS ADMINISTRATION (3 credits). Covers a chief information officer's multiple role in management of computer-based resources, both centralized and networked data center operations with wide-area networks and local-area networks; computer-based systems development/maintenance/security. (Requirement: Prerequisite course or equivalent.) Prerequisites: MGT 5014.

MGT 5153 TELECOMMUNICATIONS SYSTEMS MANAGEMENT (3 credits). Explores the legal and technical operation environment of telecommunications in organizations. Assesses organizational ramifications of government telecommunications laws, policies and deregulatory activities. (Requirement: Prerequisite course or equivalent.) Prerequisites: MGT 5014.

MGT 5154 ADVANCED MANAGEMENT INFORMATION SYSTEMS (3 credits). Covers the relationship between information technology and the strategic operational and functional areas of organizations in both global and domestic environments. May serve as the capstone for certain majors. Prerequisites: MGT 5014.
MGT 5160 INTRODUCTION TO eBUSINESS (3 credits). Introduces the concept of eBusiness and how it affects businesses, governments and people. Identifies the major building blocks of an eBusiness organizational system, such as marketing, information technology, and services distribution and strategic planning. (Requirement: Undergraduate course work in business fundamentals or marketing.)

MGT 5162 SURVEY OF INFORMATION TECHNOLOGIES FOR eBUSINESS (3 credits). Surveys information technologies available for an organization's eBusiness enterprise. Covers the role of the Internet; use of search engines for business promotions; strategies for evaluation of effectiveness of eBusiness sites; cost estimation for eBusiness site design, development and implementation; and maintenance technologies. Prerequisites: MGT 5014, MGT 5160.

MGT 5163 MARKETING IN AN INTERNET-BASED ENVIRONMENT (3 credits). Develops the organization's marketing function in an expanded, multi-channel capacity to conduct eBusiness in an Internet-based environment. Discusses barriers to eBusiness market entry and their impact on the organization's decision making. Analyzes sources of product/service availability and cost reduction strategies in eBusiness. Prerequisites: MGT 5019, MGT 5160.

MGT 5166 PROJECTS IN eBUSINESS (3 credits). Students work closely with a faculty member to develop an eBusiness project, such as a business plan for a start-up company or an acquisition/merger of existing companies. Requires an applied research project report. Prerequisites: MGT 5160.

MGT 5170 QUALITY MANAGEMENT (3 credits). Introduces principles and techniques for establishing quality goals, identification of customer needs, measurement of quality objectives and development of process features and controls for improving overall system performance.

MGT 5171 MANAGERIAL DECISION MODELING (3 credits). Covers solving problems with decision trees, decision models based on expected value/uncertainty, forecasting, PERT/CPM, utility-based decision-making, and decision support systems. Uses case studies and computer software, and emphasizes practical applications. Features decision scenarios, decision criteria and decision states. Prerequisites: MGT 5006.

MGT 5211 PROCUREMENT AND CONTRACT MANAGEMENT (3 credits). Overviews in depth the federal acquisition process and introduces the basic concepts, policies and procedures incident to government contracting through the FAR and supplementing directives.

MGT 5212 ADVANCED PROCUREMENT AND CONTRACT MANAGEMENT (3 credits). Covers principles, policies, concepts and procedures in management of contracts and subcontracts. Includes rules of interpretation, subcontracting terms and conditions, in-depth examination of significant contract clauses, patent/data provisions, risk allocation and assumption, impossibility of performance, product liability, warranties and claims. Prerequisites: MGT 5211.

MGT 5213 CONTRACT CHANGES, TERMINATIONS AND DISPUTES (3 credits). Uses case studies and lectures to examine in depth the post-award management problems associated with contract administration. Covers contract changes, terminations, disputes and other issues. Prerequisites: MGT 5211.

MGT 5214 COST PRINCIPLES, EFFECTIVENESS AND CONTROL (3 credits). Includes financial and accounting overviews of government acquisition policy and procedures. Requires completion of foundation requirements. Prerequisites: MGT 5001, MGT 5211.

MGT 5215 EMERGENCY PROCUREMENT AND CONTRACT MANAGEMENT (3 credits). Covers the basic concepts, policies and procedures incident to public agency contracting. Includes in-depth coverage of the acquisition process. Emphasizes using commercial organizations to supply goods and services, contingency contracting and interagency support; and establishing organizations for maintenance and continuity of operations.

MGT 5216 MANAGEMENT OF LOGISTICS IN COMPLEX EMERGENCIES (3 credits). Covers key institutional factors. Includes emergency rescue; military agencies; local, state and federal emergency agencies in the field; and international humanitarian and relief organizations. Explores emergency requirements for food, shelter, healthcare and public order. As graduating semester capstone, requires significant research or project.

MGT 5217 CONTRACT AND SUBCONTRACT FORMULATION (3 credits). Studies in depth the pre-award phase of the federal acquisition process. Uses class discussions and case studies to examine the management problems from the perspective of the contracting office, requiring activity, courts, Congress and the contractors. Prerequisites: MGT 5211.

MGT 5218 CONTRACT NEGOTIATIONS AND INCENTIVE CONTRACTS (3 credits). Explores, analyzes and discusses negotiation concepts and techniques, and places them into practice using mock negotiations. Examines all types of contracts. Prerequisites: MGT 5211.

MGT 5220 CONTRACT MANAGEMENT RESEARCH SEMINAR (3 credits). Advanced study and research of topical government contract management issues. Involves a significant research paper or challenging capstone project designed to demonstrate mastery over the complete curriculum. Prerequisites: MGT 5211.

MGT 5231 GOVERNMENT CONTRACT LAW (3 credits). Focuses on the method rather than the material. Uses the case method of study and basic source material to cover all facets of procurement law. Emphasizes legal methods, logic and the development of strategies to support and explain procurement law.

MGT 5240 BUSINESS AND LEGAL ASPECTS OF INTELLECTUAL PROPERTY (3 credits). Examines patents, trademark, copyright and trade secret law.

MGT 5270 SPECIAL TOPICS IN CONTRACTS MANAGEMENT (3 credits). Independent study with a faculty member in an area of contract management in greater depth than is normally possible in a regular class. Requires a comprehensive term paper. (Requirement: Instructor approval.) Prerequisites: MGT 5211.

MGT 5500 INTEGRATED LOGISTICS MANAGEMENT (3 credits). Provides the framework for integrated logistics support (ILS). Discusses the management tools available to logistics managers and places ILS in perspective within the acquisition process. Includes understanding of all elements of ILS, the relationship of ILS elements to ILS planning and current systems acquisition practices.

MILITARY SCIENCE

MSC 1001 MILITARY SCIENCE 1 (1 credit). Studies the history, mission and organization of the Army ROTC and the U.S. Army; customs, courtesies, squad organization and first aid; and leadership development through practical exercises. Academic classes meet one hour weekly. Field exercise lab meets 1.5 hours weekly. Optional: Ranger Company, Cadet Club, Color Guard, Drill Team and field exercises.

MSC 1002 MILITARY SCIENCE 1 (1 credit). Studies the history, mission and organization of the Army ROTC and the U.S. Army; customs, courtesies, squad organization and first aid; and leadership development through practical exercises. Academic classes meet one hour weekly. Leadership lab meets 1.5 hours weekly. Optional: Ranger Company, Cadet Club, Color Guard, Drill Team and field exercises. Prerequisites: MSC 1001.

MSC 1003 LEADERSHIP LAB 1 (1 credit). Students engage in a minimum of 4 hours of basic military leadership and management techniques to include physical training, troop leading procedures, field training and individual and small unit tactics and training.

MSC 1004 LEADERSHIP LAB 2 (1 credit). Students engage in a minimum of 4.5 hours of basic military leadership and management techniques to include physical training, troop leading procedures, field training and individual and small unit tactics and training. Prerequisites: MSC 1005.

MSC 2001 MILITARY SCIENCE 2 (2 credits). Land navigation and map reading; basic leadership and continued leadership development through practical exercises; Army communications procedures. Academic classes meet two hours weekly. Leadership lab meets 1.5 hours weekly. Optional: Ranger Company, Cadet Club, Color Guard, Drill Team and additional weekend field exercises.

MSC 2002 MILITARY SCIENCE 2 (2 credits). Land navigation and map reading; basic leadership and continued leadership development through practical exercises; Army communications procedures. Academic classes meet two hours weekly. Leadership lab meets 1.5 hours weekly. Optional: Ranger Company, Cadet Club, Color Guard, Drill Team and additional weekend field exercises. Prerequisites: MSC 2001.

MSC 3001 MILITARY SCIENCE 3 (3 credits). Military estimates, operation orders and platoon tactics; weapons, land navigation, military skills and communications II; instructional techniques; and development of leadership through tactical exercises. Classes meet three hours weekly. Leadership lab meets 1.5 hours weekly. Optional: Ranger Company, Cadet Club and additional weekend field exercises (attendance required). Prerequisites: MSC 1001, MSC 1002, MSC 2001, MSC 2002.

MSC 3002 MILITARY SCIENCE 3 (3 credits). Military estimates, operation orders and platoon tactics; weapons, land navigation, military skills and communications II; instructional techniques; and development of leadership through tactical exercises. Classes meet three hours weekly. Leadership lab meets 1.5 hours weekly. Optional: Ranger Company, Cadet Club and additional weekend field exercises (attendance required). Prerequisites: MSC 3001.

MSC 4001 MILITARY SCIENCE 4 (3 credits). Military correspondence; staff functions and logistics; military history; military personnel management, military justice and advanced ethics; and continued leadership development through practical exercises. Classes meet three hours weekly. Leadership lab meets 1.5 hours weekly. Field exercises (attendance required). Optional: Ranger Company and Cadet Club. Prerequisites: MSC 3002.

MSC 4002 MILITARY SCIENCE 4 (3 credits). Military correspondence; staff functions and logistics; military history; military personnel management, military justice and advanced ethics; and continued leadership development through practical exercises. Classes meet three hours weekly. Leadership lab meets 1.5 hours weekly. Field exercises (attendance required). Optional: Ranger Company and Cadet Club. Prerequisites: MSC 4001.
MTH 0003 BASIC ALGEBRA (3 credits). Builds a foundation for algebra. Includes algebraic expressions, order of operations, linear equations and inequalities. Introduces graphing, polynomials, exponents and factoring. Credit may not be applied to any Florida Tech degree. (Requirement: Must be enrolled in University Alliances.)

MTH 0111 INTERMEDIATE ALGEBRA (3 credits). Basic operations on real numbers, algebraic expressions, linear equations, inequalities, exponents, polynomials, factoring, rational functions, roots, radicals, quadratic equations and quadratic functions. Credit cannot be applied toward any Florida Tech degree.

MTH 1000 PRECALCULUS (4 credits). Algebra and trigonometry that are used to develop the skills needed in calculus. Required for students who have minimal algebra and/or trigonometry preparation, or whose placement test indicated such a need. (Requirement: Passing score on placement exam or prerequisite course.) Prerequisites: MTH 0111 or MTH 0111.

MTH 1001 CALCULUS 1 (4 credits). Functions and graphs, limits and continuity, derivatives of algebraic and trigonometric functions, chain rule; applications to maxima and minima, and to related rates. Exponential logarithmic, circular and hyperbolic functions: their inverses, derivatives and integrals. (Requirement: High school algebra and trigonometry, and a passing score on the placement test, or prerequisite course.) Prerequisites: MTH 1000.

MTH 1002 CALCULUS 2 (4 credits). Integration and applications of integration, further techniques of integration, improper integrals, l'Hospital's rule, sequences and series, numerical methods, polar coordinates and introductory differential equations. Prerequisites: MTH 1001.

MTH 1051 INTRODUCTORY DISCRETE MATHEMATICS (3 credits). Elementary coverage of discrete mathematics. Includes logical arguments, mathematical induction in proofs, sets and relations (extension to functions and their properties), elementary counting principles (inclusion-exclusion), permutations and combinations. Credit can only be applied toward business, communication, humanities, management, psychology or computer information systems degrees at Florida Tech. (Requirement: Must be enrolled in University Alliances.) Prerequisites: MTH 1701.

MTH 1603 APPLIED CALCULUS AND STATISTICS (3 credits). Includes derivatives and integrals, and their applications, and probability and statistics, and their applications. Credit cannot be applied toward any Florida Tech degree that requires MTH 1001. Prerequisites: MTH 1000.

MTH 1701 COLLEGE ALGEBRA (3 credits). Real-number system: arithmetic operations with polynomials, special products and factoring; linear, fractional and quadratic equations; inequalities, exponents, radicals and absolute values; functions and graphs; and complex numbers, logarithms, logarithmic and exponential functions. Credit can only be applied toward business, communication, humanities, management, psychology or computer information systems degrees at Florida Tech. (Requirement: Passing grade on placement exam or prerequisite course.) Prerequisites: MTH 0111 or MTH 0111.

MTH 1702 APPLIED CALCULUS (3 credits). Elements of differential and integral calculus with application to business, economics, management and the social and life sciences, as well as maxima, minima, rates, exponential growth and decay, and some techniques of integration. Prerequisites: MTH 1000 or MTH 1701.

MTH 1703 FINITE MATHEMATICS (3 credits). Studies topics in mathematics especially applicable to business, such as linear models, linear programming, mathematics of finance, counting methods, probability and statistics. (Requirement: Must be enrolled in University Alliances.) Prerequisites: MTH 1701.

MTH 1801 TRIGONOMETRY REVIEW (1 credit). Reviews trigonometric topics necessary for calculus, including trigonometric functions, graphs, identities and solving trigonometric equations. May be taken with MTH 1001. (Requirement: High school trigonometry and appropriate score on placement test.)

MTH 2001 CALCULUS 3 (4 credits). Cylindrical and spherical coordinates, vectors, functions of several variables, partial derivatives and extrema, multiple integral, vector integral calculus. Prerequisites: MTH 1002.

MTH 2051 DISCRETE MATHEMATICS (3 credits). Formulation of precise definitions and their negations using propositional and predicate logic; argument analysis and proof techniques including induction; number theory; and sets, relations, functions, directed graphs and elementary counting arguments. (Requirement: Passing score on placement test or prerequisite course.) Prerequisites: MTH 1000 or MTH 1001 or MTH 1702.

MTH 2202 LINEAR ALGEBRA FOR DIFFERENTIAL EQUATIONS (1 credit). Includes systems of equations, matrices, determinants, vector spaces, eigenvalues, and eigenvectors. Supplements differential equations. (Requirement: Instructor approval.) Prerequisites: MTH 1002.

MTH 2332 PRIMER FOR BIOMATH (1 credit). Introduces the separate languages of mathematics and biology such that students from the different disciplines can efficiently develop a biomath glossary to communicate with one another. Focuses on the current research projects in biology and ecology, and the relevant mathematical analysis. (Requirement: Instructor approval.) Prerequisites: MTH 1000.

MTH 2401 PROBABILITY AND STATISTICS (5 credits). Random variables, expectations, sampling and estimation of parameters, normal and other distributions and central-limit theorem, tests of hypothesis, linear regression and design experiments. Prerequisites: MTH 1002.

MTH 3051 COMBINATORICS AND GRAPH THEORY (3 credits). Elementary and advanced counting techniques including permutations, combinations, multisets, inclusion-exclusion, generating functions, recurrence relations and topics in graph theory including graphs, trees, binary tree, graph traversals and network flow. Prerequisites: MTH 1001, CSE 1400 or MTH 2051.

MTH 3102 INTRODUCTION TO LINEAR ALGEBRA (3 credits). Includes vectors and matrices, linear equations, vector spaces and subspaces, orthogonality, determinants, eigenvalues and eigenvectors, and linear transformations. Introduces students to solution and manipulation of matrix equations using a standard package of mathematical software. Prerequisites: MTH 1002.

MTH 3103 INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS AND APPLICATIONS (3 credits). Includes heat, wave and Laplace equations, initial and boundary value problems of mathematical physics and Fourier series. Also covers Dirichlet problem and potential theory, Dalambert's solutions for wave equation, Fourier and Laplace transforms, and Poisson integral formula. Also includes PDEs in higher dimensions and special functions of mathematical physics. Prerequisites: MTH 2001, MTH 2201.

MTH 3301 FINITE DIFFERENCES AND FINITE ELEMENTS (3 credits). Numerical methods for BVPs in one and two dimensions; finite difference methods for solving PDEs; finite element methods, variational formulation and Galerkin approximations for ODEs and two-dimensional PDEs, and writing programs. Prerequisites: CSE 1502 or CSE 1503 or CSE 2050. MTH 3201 or MTH 3210.

MTH 3663 MATHEMATICAL METHODS FOR BIOLOGY AND ECOLOGY (3 credits). Examines biological processes and mathematically reformulates the biological information into linear and nonlinear systems, and differential equations, and studies these formulations via matrix algebra, numerical techniques, approximation theory, stability and bifurcation analysis. (Requirement: Junior standing and instructor approval.) Prerequisites: MTH 1002, BIO 2332 or MTH 2332.

MTH 3993 SELECTED TOPICS ON BIOSTOCHASTICS (3 credits). Studies the influence of stochasticity on biological processes using statistical methods and Markov processes to analyze vital biological rates, including mutation rates for disease-associated DNA repeats, organismal growth and per-capita survival. (Requirement: Instructor approval.) Prerequisites: MTH 1002, BIO 2332 or MTH 2332.

MTH 4051 ABSTRACT ALGEBRA (3 credits). Groups, cyclic groups, permutation groups, isomorphisms, cosets and Lagrange's theorem, rings, integral domains, vector spaces, and fields. Prerequisites: MTH 302.

MTH 4082 INTRODUCTION TO PARALLEL PROCESSING (3 credits). Introduces parallel algorithm development, architectures for parallel computers, programming paradigms SIMD and MIMD for shared and distributed memory computers. Presents parallel algorithms for matrix computations, sorting and searching, and various numerical algorithms. Includes analysis of performance of parallel algorithms and scalability of algorithms. (Requirement: Programming ability in FORTRAN or C.) Prerequisites: CSE 1502 or CSE 1503 or CSE 2010 or CSE 2050.

MTH 4101 INTRODUCTORY ANALYSIS (3 credits). Rigorous treatment of calculus. Includes sequences and series of real numbers, limits of functions, topology of the real line, continuous functions, uniform continuity, differentiation, Riemann integration, sequences and series of functions, Taylor's theorem; uniform convergence and Fourier series. Prerequisites: MTH 2001 or MTH 2201.

Course Descriptions 261
MTH 4201 MODELS IN APPLIED MATHEMATICS (3 credits). Allows students to formulate and construct mathematical models that are useful in engineering, physical sciences, biological sciences, environmental studies and social sciences. (Requirement: Junior standing.) Prerequisites: MTH 2201.

MTH 4311 NUMERICAL ANALYSIS (3 credits). Introduces numerical methods for solving equations in one variable, polynomial approximation, interpolation, numerical differentiation and integration, initial-value problems for ODE and direct methods for solving linear systems. Prerequisites: CSE 1502 or CSE 1503 or CSE 2050, MTH 2201.

MTH 4320 NEURAL NETWORKS (3 credits). Includes basic existence theory, differential and integral inequalities, qualitative and quantitative theory, and Lyapunov's second method. Prerequisites: CSE 1502 or CSE 1503 or CSE 2050, MTH 2201.

MTH 4801 ADVANCED GEOMETRY (3 credits). Topics in Euclidean and non-Euclidean geometry with an emphasis on proofs and critical thinking. Satisfies the state of Florida requirement for teacher certification in mathematics. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 2001.

MTH 4920 SPECIAL TOPICS IN APPLIED MATHEMATICS (3 credits). Selected topics from mathematics. Content varies from year to year depending on the needs and interests of the students and expertise of the instructor. (Requirement: Instructor approval.)

MTH 4990 UNDERGRADUATE RESEARCH (3 credits). Participation in a research project under the direction of a faculty member. (Requirement: Instructor approval.) (Q)

MTH 5007 INTRODUCTION TO OPTIMIZATION (3 credits). An applied treatment of modeling, analysis and solution of deterministic (e.g., nonprobabilistic) problems. Topics include model formulation, linear programming, network flows, discrete optimization and dynamic programming. (Requirement: At least one upper-level undergraduate math course.)

MTH 5009 INTRODUCTION TO PROBABILISTIC MODELS (3 credits). An applied treatment of modeling, analysis and solution of problems involving probabilistic information. Topics chosen from decision analysis, inventory models, Markov chains, queuing theory, simulation, forecasting models and game theory. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 2401.

MTH 5050 SPECIAL TOPICS (3 credits). Contents may vary depending on the needs and interests of the students and the fields of expertise of the faculty. (Requirement: Instructor approval.)

MTH 5051 APPLIED DISCRETE MATHEMATICS (3 credits). Logic fundamentals, induction, recursion, combinatorial mathematics, discrete probability, graph theory fundamentals, trees, connectivity and traversability. Applications from several fields of science and engineering, including computer science, operations research, and computer and electrical engineering. Prerequisites: MTH 2051.

MTH 5070 EDUCATIONAL STATISTICS (3 credits). Includes sampling procedures, frequency distributions, measures of central tendency, estimation of variability, the normal distribution, differences between two groups, analysis of variance and correlation. Also includes nonparametric techniques, multivariate techniques and computer analysis of educational data.

MTH 5101 INTRODUCTORY ANALYSIS (3 credits). Rigorous treatment of calculus. Includes sequences and series of real numbers, limits of functions, topology of the real line, continuous functions, uniform continuity, differentiation, Riemann integration, sequences and series of functions, Taylor's theorem, uniform convergence and Fourier series. Prerequisites: MTH 2001, MTH 2201.

MTH 5102 LINEAR ALGEBRA (3 credits). Linear algebra, systems of linear equations and Gaussian elimination method; inverses, rank and determinants; vector spaces; linear transformations, linear functional and dual spaces; eigenvalues, eigenvectors; symmetric, Hermitian and normal transformations; and quadratic forms. (Requirement: Undergraduate course in multivariable calculus or linear algebra.)

MTH 5107 OPTIMIZATION MODELS AND METHODS (5 credits). Surveys popular optimization models and algorithms. Topics chosen from linear, integer, nonlinear, dynamic and combinatorial optimization. (Requirement: At least one upper-level undergraduate math course.)

MTH 5111 REAL VARIABLES 1 (3 credits). Studies basic topology, continuous and semicontinuous functions, metric spaces, differentiation, measures, product measure, Lebesgue integration, Radon-Nikodym Theorem, Lp-spaces and measures on topological spaces. Prerequisites: MTH 5010.

MTH 5115 FUNCTIONAL ANALYSIS (3 credits). Banach spaces, Hilbert spaces, topological vector spaces, bounded and unbounded linear operators, spectral theory. Prerequisites: MTH 5101.

MTH 5130 THEORY OF COMPLEX VARIABLES (3 credits). Topology of the complex plane, analytic functions, Cauchy's integral formula, Liouville's theorem, maximum modulus theorem, Taylor and Laurent series, singularities, residue theorem, analytic continuation, entire functions, infinite product representation and conformal mapping. Prerequisites: MTH 2201, MTH 4101.

MTH 5201 MATHEMATICAL METHODS IN SCIENCE AND ENGINEERING 1 (3 credits). Fourier series and their convergence properties; Sturm-Liouville eigenfunction expansion theory; Bessel and Legendre functions; solution of heat, wave and Laplace equations by separation of variables in Cartesian coordinates. Prerequisites: MTH 2001, MTH 2201.

MTH 5202 MATHEMATICAL METHODS IN SCIENCE AND ENGINEERING 2 (3 credits). Solution of heat, wave and Laplace equations by separation of variables in cylindrical and spherical coordinates. Associated Legendre functions, hypergeometric functions and spherical harmonics. Fourier transforms and separation of variables for heat and wave equations on infinite intervals. Vector integral calculus. Prerequisites: MTH 5201.

MTH 5203 MATHEMATICAL METHODS IN SCIENCE AND ENGINEERING 3 (3 credits). General perturbation techniques for linear and nonlinear ordinary differential equations, boundary layer theory, WKBJ methods, multiple scale analysis, approximate methods of solution, asymptotic expansion of integrals, asymptotic power series solutions of linear ODEs near irregular singular points. Prerequisites: MTH 5125, MTH 5201.

MTH 5220 THEORY OF ORDINARY DIFFERENTIAL EQUATIONS (3 credits). Includes basic existence theory, differential and integral inequalities, qualitative and quantitative theory, and Lyapunov's second method. Prerequisites: MTH 2201, MTH 4101.

MTH 5230 PARTIAL DIFFERENTIAL EQUATIONS (3 credits). Includes the Hamilton-Jacobi equation, and elliptic, parabolic and hyperbolic problems. Green function methods, transform methods, maximum principle. Prerequisites: MTH 2001, MTH 2201, MTH 4101.

MTH 5301 NUMERICAL ANALYSIS (3 credits). Includes Gaussian elimination and solution of linear systems of equations, root finding methods, systems of nonlinear equations, interpolation, numerical integration, initial value problems for ODEs and fast Fourier transform. Prerequisites: CSE 1502 or CSE 1503 or CSE 2050, MTH 2201.

MTH 5315 NUMERICAL METHODS FOR PARTIAL DIFFERENTIAL EQUATIONS (3 credits). Covers finite difference and finite element methods for partial differential equations. Prerequisites: MTH 5210, MTH 5301.

MTH 5320 NEURAL NETWORKS (3 credits). Introduces architectures, algorithms and applications. Includes single and multilayer perceptrons, counterpropagation, Kohonen self-organization, adaptive resonance theory, neurocomputing, probabilistic neural networks and Boltzmann machines with and without learning, recurrent neural networks. Prerequisites: CSE 1502 or CSE 1503 or CSE 2050. MTH 2201.

MTH 5401 APPLIED STATISTICAL ANALYSIS (3 credits). Covers statistical distributions, statistical tests for data, least squares and regression, estimation, tests of hypotheses, analysis of variance, planning and designing research experiments, randomized blocks, Latin and Graeco-Latin squares and data reduction, analysis using ANOVA (analysis of variance) and other methods. Prerequisites: MTH 2001.

MTH 5411 MATHEMATICAL STATISTICS 1 (3 credits). Covers discrete and continuous random variables, generating and moment generating functions, multivariate distributions, covariance and correlation, sums of independent random variables, conditional expectation, Central Limit Theorem, Markov and Chebyshev inequalities and the Law of Large Numbers. (Requirement: Undergraduate courses in multivariable calculus and linear algebra.)

MTH 5412 MATHEMATICAL STATISTICS 2 (3 credits). Includes maximum likelihood and Bayes estimators, confidence intervals, testing hypotheses, uniformly most powerful tests, nonparametric methods (chi-square and Kolmogorov-Smirnov goodness-of-fit tests) and regression analysis. Prerequisites: MTH 5411.

MTH 5420 THEORY OF STOCHASTIC PROCESSES (3 credits). Includes discrete- and continuous-time stochastic processes, point and counting processes and Poisson counting process; as well as compound Poisson process, nonstationary Poisson process, renewal theory, generative processes and Markov chains. Prerequisites: MTH 5411.

MTH 5425 THEORY OF STOCHASTIC SIGNALS (3 credits). Covers univariate and multivariate distributions, generating and moment generating functions; autocorrelation, wide-sense, strict-sense stationary, voltage, Poisson, Wiener, random telegraph signal and white noise processes; Dirac delta function, Fourier transform, system response, transfer function and spectral analysis. (Requirement: Instructor approval.)

MTH 5430 QUEUING THEORY (3 credits). Includes queuing processes; imbedded and continuous time parameter processes; Markov, semi-Markov and semi-regenerative processes; single-server and multiserver queues, and processes of servicing unreliable machines. Controlled stochastic models. Prerequisites: MTH 5411.
MTH 5434 STOCHASTIC ANALYSIS OF FINANCIAL MARKETS 1 (3 credits). Lays the foundation for mathematical concepts widely applied in financial markets. Uses economical theory with stochastics (martingales, Wiener, Markov, Ito processes, stochastic differential equations) to derive fair option prices and to hedge call options. Also uses fluctuation theory to predict stocks’ crossing of critical levels. Prerequisites: MTH 5411 or MTH 5425.

MTH 5436 STOCHASTIC ANALYSIS OF FINANCIAL MARKETS 2 (3 credits). Offers multidimensional stochastics applied to financial markets. Continues with multivariate Ito processes and multidimensional Feynman-Kac theorems, hedging of American and exotic call options and forward exchange rates. Introduces time-sensitive analysis of stocks, and risk theory. Prerequisites: MTH 5434 or ORP 5025.

MTH 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

MTH 5999 THESIS (3 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in the field of mathematics. (Requirement: Instructor approval.)

MTH 6050 RESEARCH IN APPLIED MATHEMATICS (1-6 credits). Research conducted under the guidance of a member of the faculty in a selected area of mathematics. (Requirement: Instructor approval.)

MTH 6100 SELECTED TOPICS IN NONLINEAR ANALYSIS (3 credits). Advanced topics in nonlinear analysis emphasizing recent developments. May vary depending on the needs and interests of the student and the fields of expertise of the faculty. (Requirement: Instructor approval.)

MTH 6300 SELECTED TOPICS IN NUMERICAL AND COMPUTATIONAL MATHEMATICS (3 credits). Advanced topics in numerical and computational mathematics with emphasis on recent developments. May vary depending on the needs and interests of the student and the fields of expertise of the faculty. (Requirement: Instructor approval.)

MTH 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

MTH 6999 DISSERTATION RESEARCH (3-12 credits). Research and preparation of the doctoral dissertation. (Requirement: Instructor approval.)

OCE ENGINEERING

OCE 1001 INTRODUCTION TO OCEAN ENGINEERING (3 credits). Applications of engineering methods to ocean engineering design case studies and problem solving, which involve the computer as an aid. Includes individual and team approaches and student presentations of case studies.

OCE 2002 COMPUTER APPLICATIONS IN OCEAN ENGINEERING 1 (3 credits). Introduces state-of-the-art technologies, tools and methods used in ocean engineering and the marine sciences. Includes computer tools for planning, developing and designing. Introduces modern and classical methods of design, statistical analysis and evaluation along with associated computer tools.

OCE 3011 ENGINEERING MATERIALS 1 (3 credits). Introduces engineering materials. Studies atomic structures, controlling microstructure and mechanical properties of materials such as ferrous and nonferrous alloys, polymers, composites, concrete, wood and asphalt.

OCE 3012 ENGINEERING MATERIALS LAB 1 (credit). Measurement techniques, materials testing and engineering applications. Prerequisites: PHY 2091. Corequisites: OCE 3011.

OCE 3030 FLUID MECHANICS (3 credits). Covers the basic properties of fluids; statics and kinematics; integral expressions for the conservation of mass, momentum, angular momentum and energy; dynamic similitude and dimensional analysis; boundary layer principles; pipe flow, lift and drag. Prerequisites: PHY 2002. Corequisites: MTH 2201.

OCE 3033 FLUID MECHANICS LAB 1 (credit). Experiments in fundamental and applied fluid mechanics. Includes viscometry, stability of floating objects, vorticity, gravity waves and Reynolds experiment; experiments in applied fluid mechanics, open-channel flow and pipe flow; and the drag on plates and hulls. Corequisites: OCE 3030.

OCE 3521 HYDROMECHANICS AND WAVE THEORY (3 credits). Introduces hydromechanics and linear wave theory. Includes derivation of basic equations for time-dependent flows, development and solutions of the linear boundary value problems for water waves and engineering application results. Prerequisites: OCE 3030.

OCE 3522 WATER WAVE LAB 1 (credit). Students make measurements of fluid kinematic and dynamic properties of water waves and compare results to linear wave theory. Includes experiments conducted in lab wave channels and the local coastal ocean. Corequisites: OCE 3521.

OCE 4518 PROTECTION OF MARINE MATERIALS (3 credits). Studies the factors affecting the corrosion with regards to electrode potentials, polarization and passivity. Students learn designing to minimize the deleterious effects on metals, concrete and woods.

OCE 4523 COASTAL ENGINEERING PROCESSES (3 credits). Introduces physical processes of sandy beaches and the nearshore including coastal sediments, surf zone waves and currents, behavior of beach profiles, cross-shore and longshore sand transport and the reaction of beaches to storms, coastal structures and sea-level rise. Prerequisites: OCE 3521.

OCE 4525 COASTAL ENGINEERING STRUCTURES (3 credits). The design of nearshore and shorefront structures including seawalls, rubble-mound structures and beach nourishment. Also included is the study of bay inlet systems and dredging technology. Prerequisites: CVE 3030 or OCE 3030.

OCE 4531 INSTRUMENTATION DESIGN AND MEASUREMENT ANALYSIS (3 credits). Broadly introduces geophysical instrumentation design and analysis including simple DC and AC circuit designs, use of transducers common to geophysical monitoring, and the basic principles of digital data logging and microcontroller programming. Prerequisites: CSE 1502 or CSE 1503, PHY 2002.

OCE 4541 OCEAN ENGINEERING DESIGN (3 credits). Studies the engineering design of equipment to be used in the ocean. Uses a project approach covering the integration of weight and buoyancy calculations; corrosion, fouling and selection of materials; pressure hull design, and life support and power for an ocean system. (Requirement: Junior standing) (Q)

OCE 4542 OCEAN ENGINEERING SYSTEMS DESIGN (3 credits). The engineering design fundamentals that are applied to the design of ocean-related systems, including a study of the design process and related topics, such as optimization techniques, reliability predictions and simulation techniques. Prerequisites: OCE 3521, OCE 4541, OCE 4571.

OCE 4545 HYDROACOUSTICS (3 credits). The theoretical study of the fundamental relations of energy transmission in the ocean. Includes detailed coverage of components of stress, strain and motion, waves of finite amplitude, ray characteristics, refraction of dispersive wave train, boundary conditions, ray solutions and surface image solutions. Prerequisites: MTH 2201, OCE 3030.

OCE 4570 HYDROGRAPHIC SURVEYING (3 credits). Nautical charting including survey design, map projections and scales, marine positioning, echo sounding, tidal datums, photogrammetry, horizontal and vertical geodetic control, data archiving and compilation. Includes field experience with boat sheets, tide gauges, navigation, seamanship and vessel operation. Prerequisites: CVE 2080 or OCE 4911 or OCN 3401.

OCE 4561 FUNDAMENTALS OF OFFSHORE ENGINEERING (3 credits). Includes fixed and floating structures and their interactions with the ocean environment, buoy systems and their dynamics, cables and mooring systems, dynamic positioning and model testing of offshore structures. Prerequisites: MAE 3083, OCE 3030.

OCE 4563 PORT AND HARBOR DESIGN (3 credits). The design of port and harbor facilities, including navigation channels, anchoring and mooring, and berthing structures for large ships. Includes considerations of vessel characteristics, facility types, and environmental and operational design loads on marine structures. Prerequisites: CVE 3030 or OCE 3030, MAE 3081.

OCE 4571 FUNDAMENTALS OF NAVAL ARCHITECTURE 1 (3 credits). The theory of ship calculations. Includes loading and hydrostatic analysis, inclining experiment, subdivision and damaged stability; model testing and performance prediction; calculation of resistance and power, propeller design, and elements of ship dynamics and control. Prerequisites: MAE 3083, MTH 2201.

OCE 4572 STRUCTURAL DESIGN OF MARINE VEHICLES (3 credits). Provides a working knowledge of ship hull girder, longitudinal bending in still water and waves, and simple bending theory as it applies to ship structure. Culminates in the design of a mid-ship section to classification society rules. Covers concepts that predict bending moment in irregular waves and analyzes local and transverse strength. Prerequisites: OCE 4571.

OCE 4573 SHIP DESIGN (3 credits). The process of preliminary design; hull form parameters satisfying the design requirements; performance estimation; and weights and volumes. Given general requirements, the student evaluates basic design characteristics for the ship. Prerequisites: OCE 4571.

OCE 4574 STRUCTURAL MECHANICS OF MARINE VEHICLES (3 credits). Includes the ship hull girder, longitudinal bending moment in still water and waves, application of probabilistic concepts to predict bending moment in irregular waves, local and transverse strength, criteria of failure and vibration of ships. Prerequisites: OCE 4571.

OCE 4575 DESIGN OF HIGH-SPEED SMALL CRAFT (3 credits). Students learn to design features for small, high-speed hulls; requirements for preliminary design study; selection of hull type and proportion; space; layout; weight estimates; layout of the lines; powering calculations; and hydrodynamic considerations. (Requirement: Instructor approval.)
OCE 4951 SPECIAL TOPICS IN OCEAN ENGINEERING (1 credit). Special topics to suit individual or small-group requirements. Covers material not included in another course in the established curriculum. May be repeated for a maximum of three credits. (Requirement: Instructor approval.)

OCE 4952 SPECIAL TOPICS IN OCEAN ENGINEERING (2 credits). Special topics to suit individual or small-group requirements. Covers material not included in another course in the established curriculum. May be repeated for a maximum of six credits. (Requirement: Instructor approval.)

OCE 4953 SPECIAL TOPICS IN OCEAN ENGINEERING (3 credits). Special topics to suit individual or small-group requirements. Covers material not included in another course in the established curriculum. May be repeated for a maximum of nine credits. (Requirement: Instructor approval.)

OCE 4954 SENIOR PROJECT 1 (1 credit). Research and planning for students working toward the selection of a senior project. A formal proposal is prepared and submitted for adviser approval during the ninth week. (Requirement: Senior standing and program chair approval.)

OCE 4955 SENIOR PROJECT 2 (2 credits). Involves student analysis, design, construction installation and operation of equipment in the ocean to perform a designated task. Data are collected and results are compiled as a finished report. (Requirement: Senior standing and program chair approval.) Prerequisites: OCE 4954.

OCE 4956 SENIOR PROJECT 3 (3 credits). Involves student analysis, design, construction installation and operation of equipment in the ocean to perform a designated task. Data are collected and results are compiled as a finished report. (Requirement: Senior standing and program chair approval.) Prerequisites: OCE 4955.

OCE 4601 INTRODUCTION TO ENVIRONMENTAL FLOW MODELING (3 credits). Introduces turbulence models, basic numerical simulation and computer modeling of turbulent flows. Includes models of discretization schemes for finite-difference, time marching, stability, Hirt analysis and advection schemes and applies to the ocean and atmosphere. Addresses the effects of stratification. Requires student project and presentation. Also requires background in computer programming. Prerequisites: MTH 2201.

OCE 4911 MARINE FIELD PROJECTS (1 credit). Field-oriented programs including both classroom and laboratory work, involving biological, chemical, physical and geological oceanography, and coastal engineering. Approximately one semester involves a group engineering project. May be repeated for a maximum of four credits. (Requirement: Senior standing.) (Q) Prerequisites: OCE 4541, OCN 3401.

OCE 4912 MARINE FIELD PROJECTS (2 credits). Field-oriented programs including both classroom and laboratory work, involving biological, chemical, physical and geological oceanography, and coastal engineering. Approximately one semester involves a group engineering project. May be repeated for a maximum of four credits. (Requirement: Senior standing.) (Q) Prerequisites: OCE 4541, OCN 3401.

OCE 4913 MARINE FIELD PROJECTS (3 credits). Field-oriented programs including both classroom and lab work, involving biological, chemical, physical and geological oceanography, and coastal engineering. Approximately one semester involves a group engineering project. May be repeated for a maximum of four credits. (Requirement: Senior standing.) (Q) Prerequisites: OCE 4541, OCN 3401.

OCE 5515 MATERIALS FOR MARINE APPLICATIONS (3 credits). Includes materials: metals/reinforced concrete, wood/polymers and FRP, properties: physical, mechanical and chemical, environmental effects: corrosion, biofouling and thermal; and applications: materials selection for ocean engineering design.

OCE 5519 CORROSION ENGINEERING (3 credits). Corrosion and materials deterioration impacts engineering activities. Includes theory, types and economics of corrosion. Uses case studies to demonstrate corrosion prevention by the use of cathodic protection, coatings and inhibitors, and materials selection and design. (Requirement: Background in chemistry and materials, or instructor approval.)

OCE 5525 COASTAL PROCESSES AND ENGINEERING (3 credits). Includes an analysis of coastal processes (waves, tides, currents, wind and nearshore circulation) and resulting sedimentary deposits in the beach, inlet and nearshore wave–shelf environment as related to coastal engineering problems. Students study shorefront structures and system, as well as dredging technology.

OCE 5526 ADVANCED COASTAL ENGINEERING STRUCTURES (3 credits). Involves seawalls, bulkheads, jetties and breakwaters; sand bypassing systems, protective beach and dune construction-stabilization. Prediction of forces, lifetime evaluation, material selection and construction methods. (Requirement: Instructor approval.) Prerequisites: OCE 4525.

OCE 5542 OCEAN ENGINEERING SYSTEMS (3 credits). Designed to systematically find an optimum solution for ocean-related engineering problems. Discusses a system, man-ocean systems and systems engineering. Basic techniques of systems engineering. Requires student to do a case study of an ocean engineering system. (Requirement: Instructor approval.)

OCE 5550 BATHYMETRY (3 credits). Determination of coastal and deep-sea bottom topography using modern techniques of remote sensing, GIS, swath and side-scan sonar, marine geodesy, computerized data acquisition and archiving, hydroacoustic and survey vessel design; includes field experience with offshore and harbor survey vessels. (Requirement: Surveying experience.)

OCE 5563 PORT AND HARBOR ENGINEERING (3 credits). A study of port and harbor hydraulics, planning, layout and construction; dredging technology; and berthing maneuvers. Prerequisites: OCE 3030.

OCE 5570 MARINE HYDROMECHANICS AND WAVE THEORY (3 credits). Studies the motion of ideal fluid; damping and added mass; wave motions encountered in the ocean; surface gravity waves, internal waves and long waves in a rotating ocean; the motion of viscous fluid; the Navier-Stokes equations; boundary layer; and model testing. Prerequisites: MTH 2201.

OCE 5571 NAVAL ARCHITECTURE (3 credits). The theory of naval architecture, elements of ship design, ship lines, hydrostatic analysis, intact and damaged stability, strength, dimensional analysis, ABS rules, propulsion, steering, ship and platform motion, resistance, model testing, and design project. (Requirement: Instructor approval.)

OCE 5573 DYNAMICS OF MARINE VEHICLES (3 credits). Studies regular and irregular wave data as applied in ship dynamics. Includes uncoupled heaving, pitching and rolling motion equations; calculation of the added mass and damping coefficients; strip method; coupled motions; nonlinear roll motion; dynamic effects related to motions; and wave loads. Prerequisites: MAE 3081, MTH 2201. OCE 3030.

OCE 5575 APPLIED MARINE HYDRODYNAMICS (3 credits). Provides a background for the calculation of hydrodynamic forces, forces due to wave in inviscid fluid, effect of viscosity, hydrodynamic modeling, wave drift forces and forces due to current on moored and dynamically positioned floating structures, hydrodynamic impact and its prediction, flow-induced vibration. Prerequisites: OCE 3030.

OCE 5586 OCEAN ENGINEERING DATA ANALYSIS (3 credits). Ocean monitoring requires measurement, analysis and description of processes in random seas. Students produce, from measurements, the statistical distributions of waves, parametric and spectral sea-state descriptions, directional wave spectra, ocean engineering design criteria and linear responses of ocean structures and systems. (Requirement: Instructor approval.)

OCE 5590 DESIGN OF MARINE PROPULSION SYSTEMS (3 credits). Provides an understanding and working knowledge of resistance characteristics of different types of vessels. Explains the principles of propellers and water-jet operations, and the theory and performance analysis as propulsion devices. Teaches how to design an efficient propulsion system for a specific vessel under consideration. Prerequisites: OCE 3030.

OCE 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

OCE 5901 SPECIAL TOPICS IN OCEAN ENGINEERING (1 credit). Advanced topics in selected areas of ocean engineering not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

OCE 5902 SPECIAL TOPICS IN OCEAN ENGINEERING (2 credits). Advanced topics in selected areas of ocean engineering not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

OCE 5903 SPECIAL TOPICS IN OCEAN ENGINEERING (3 credits). Advanced topics in selected areas of ocean engineering not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

OCE 5904 OCEAN ENGINEERING SEMINAR (0 credits). Presentation of technical papers and progress in research by staff, students and invited speakers.

OCE 5999 THESIS RESEARCH (3-6 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in the field of ocean engineering. (Requirement: Admission to candidacy for the master's degree.)

OCE 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

OCE 6993 RESEARCH IN OCEAN ENGINEERING (1-3 credits). Research under the guidance of a member of the graduate faculty. Repeatable as required.

OCE 6999 DISSERTATION RESEARCH (3-12 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in the field of ocean engineering. (Requirement: Admission to candidacy for the doctoral degree.)
OCN 1010 OCEANOGRAPHY (3 credits). Surveys oceanography including biological, chemical, geological and physical processes in the ocean. Includes field trips.

OCN 2407 METEOROLOGY (3 credits). Introduces meteorological phenomena and principles, including descriptive weather elements, general atmospheric circulation, air-sea interaction and the physical mechanisms that create atmospheric motions, mixing and transfer of momentum, mass and heat. Prerequisites: MTH 1001.

OCN 2602 ENVIRONMENTAL GEOLOGY (3 credits). Reviews the internal and external processes that have shaped Earth’s surface and how an understanding of these processes can be used to successfully manage modern problems of organization and mineral exploration. Successful management of environmental and geological hazards relies on an understanding of the basic principles of physical geology.

OCN 3101 BIOLOGICAL OCEANOGRAPHY (3 credits). Includes relationships of biological, chemical, geological and physical aspects of the oceans to biological oceanography. Instructor advisement suggested; OCN 3111 lab may not be required as corequisite. Prerequisites: BIO 1010 or BIO 1020, CHM 1102, PHY 2002.

OCN 3111 BIOLOGICAL OCEANOGRAPHY LAB (1 credit). Students receive field and lab experience in the use of equipment and methods in biological oceanography studies. Corequisites: OCN 3101.

OCN 3201 MARINE AND ENVIRONMENTAL CHEMISTRY (3 credits). Includes a systematic examination of seawater and its constituent parts; problems associated with ocean chemistry; interaction of chemical parameters with other ocean studies; and an evaluation of the ocean as an environment. (Requirement: Instructor approval or prerequisite course.) Prerequisites: CHM 1102.

OCN 3211 MARINE AND ENVIRONMENTAL CHEMISTRY LAB (1 credit). Field and lab exercises provide practical experience in the use of equipment and methods for measuring common chemical parameters in marine and environmental chemistry. Corequisites: OCN 3201.

OCN 3301 GEOLOGICAL OCEANOGRAPHY (3 credits). Introduces geological oceanography; origin and evolution of ocean basins. Includes a survey of major neric and oceanic sediment patterns and the processes that control their distribution over time and space; and paleoceanography. Prerequisites: OCN 1010, OCN 2602.

OCN 3311 GEOLOGICAL OCEANOGRAPHY LAB (1 credit). Field and lab exercises provide experience in the use of equipment and methods relevant to geologic investigations of the ocean. Corequisites: OCN 3301.

OCN 3401 PHYSICAL OCEANOGRAPHY (3 credits). Studies water structure and circulation of the world ocean and local areas by simple dynamical and descriptive models; and tides, wave motion and coastal processes. Prerequisites: PHY 2002.

OCN 3411 PHYSICAL OCEANOGRAPHY LAB (1 credit). Field and lab exercises provide experience in the use of equipment and methods in physical oceanography. Corequisites: OCN 3401.

OCN 3430 FUNDAMENTALS OF GEOPHYSICAL FLUIDS (3 credits). Studies the basic properties of Earth’s fluids; statics and kinematics; integral expressions for the conservation of mass, momentum, angular momentum and energy, dynamic similarity, dimensional analysis and boundary-layer principles; applications to meteorology, oceanography and geophysics. Prerequisites: MTH 2301, PHY 2002.

OCN 3433 GEOPHYSICAL FLUIDS LAB (1 credit). Experiments in fundamental and applied fluid mechanics. Includes viscometry, stability of flows, vorticity, gravity waves and Reynolds stresses; physical models in meteorology, oceanography and other geophysical fluid flows. Corequisites: OCN 3430.

OCN 3911 MARINE FIELD PROJECTS: PROPOSAL (1 credit). Preparations are made for the summer research program (Marine Field Projects). Students are guided through the process of selecting, designing and proposing research projects to be carried out during the summer marine field project. (Requirement: Junior standing in oceanography.) (Q)

OCN 4103 MARINE AND ESTUARINE ZOOPLANKTON (3 credits). Systematic and ecological studies of marine zooplankton; discussions of parameters that affect secondary production; phytoplankton-zooplankton relationships, patchiness, migration and distribution; and collection, sampling, lab techniques and field trips. (Requirement: Instructor approval or prerequisite course.) Prerequisites: OCN 3101.

OCN 4104 MARINE AND ESTUARINE BENTHOS (3 credits). Studies population and community ecology of marine soft-sediment systems from shallow water and deep sea; rocky intertidal ecology; and ecology of seagrass systems. (Requirement: Instructor approval or prerequisite course.) Prerequisites: OCN 3101.

OCN 4105 SURVEY OF FLORIDA REEF SYSTEMS (2 credits). Lectures and field studies on the biological, geological and physical aspects of coral reef systems in the Florida Keys. Conducted in the Florida Keys. (Requirement: Instructor approval or prerequisite course.) Prerequisites: OCN 3101, OCN 3301.

OCN 4106 MITIGATION AND RESTORATION OF COASTAL SYSTEMS (3 credits). Introduces current activities in mitigation and restoration of coastal systems. Integrates lectures, guest speakers and field trips in a case-study format to demonstrate the process of restoration planning. Students develop a mitigation plan for a hypothetical development project. (Requirement: Senior standing.)

OCN 4204 MARINE AND ENVIRONMENTAL POLLUTION (5 credits). A holistic approach to the study of pollution. Defines and discusses pollutants, quantities, sources and their impacts. Considers past and present waste disposal techniques and proposed alternatives. (Requirement: Instructor approval or prerequisite course.) Prerequisites: CHM 1102, OCN 1010 or OCN 3201.

OCN 4405 GENERAL DYNAMIC OCEANOGRAPHY (3 credits). Currents and current systems in the world oceans based on the principles of fluid dynamics; geostrophy, the role of friction and inertia; vorticity theory and the conservation theorems in circulation theory; and dimensional analysis. Gives treatments of surface waves and certain meteorological phenomena. Prerequisites: OCN 3401, OCN 3430.

OCN 4704 REMOTE SENSING FOR OCEANOGRAPHY (3 credits). Interaction of radiation with water environments; radiative processes in the atmosphere; spectral characteristics of plankton, sediments, land and water; applications to sea surface temperature, heat flux, color, dynamic topography, surface winds and weather prediction; instrumentation and computer-assisted image analysis. Prerequisites: PHY 2002.

OCN 4901 SPECIAL TOPICS IN OCEANOGRAPHY (1 credit). Special topics not covered in the regular curriculum, offered to specific student groups. May be repeated for a maximum of three credits. (Requirement: Instructor approval.)

OCN 4902 SPECIAL TOPICS IN OCEANOGRAPHY (2 credits). Special topics not covered in the regular curriculum, offered to specific student groups. May be repeated for a maximum of six credits. (Requirement: Instructor approval.)

OCN 4903 SPECIAL TOPICS IN OCEANOGRAPHY (3 credits). Special topics not covered in the regular curriculum, offered to specific student groups. May be repeated for a maximum of nine credits. (Requirement: Instructor approval.)

OCN 4911 MARINE FIELD PROJECTS 1 (1 credit). In-depth field/lab study of important facets of the Indian River Lagoon and/or nearshore waters. Student teams are specifically configured to accomplish the desired objectives. Oceanographic data are collected by using standard instrumentation and devices. May be repeated for a maximum of four credits. (Requirement: Instructor approval or senior standing in oceanography.) (Q)

OCN 4912 MARINE FIELD PROJECTS 2 (2 credits). In-depth field/lab study of important facets of the Indian River Lagoon and/or nearshore waters. Student teams are specifically configured to accomplish the desired objectives. Oceanographic data are collected by using standard instrumentation and devices. May be repeated for a maximum of four credits. (Requirement: Instructor approval or senior standing in oceanography.) (Q)

OCN 4913 MARINE FIELD PROJECTS 3 (3 credits). In-depth field/lab study of important facets of the Indian River Lagoon and/or nearshore waters. Student teams are specifically configured to accomplish the desired objectives. Oceanographic data are collected by using standard instrumentation and devices. (Requirement: Instructor approval or senior standing in oceanography.) (Q)

OCN 4991 UNDERGRADUATE RESEARCH IN OCEANOGRAPHY (1 credit). Student planning and research on a project using equipment and techniques in oceanography. Projects may be done by an individual or a group. Requires an individual proposal and results written as a formal report. (Requirement: Senior standing in oceanography.)

OCN 4992 UNDERGRADUATE RESEARCH IN OCEANOGRAPHY (2 credits). Student planning and research on a project using equipment and techniques in oceanography. Projects may be done by an individual or a group. Requires an individual proposal and results written as a formal report. (Requirement: Senior standing in oceanography.)

OCN 4993 UNDERGRADUATE RESEARCH IN OCEANOGRAPHY (3 credits). Student planning and research on a project using equipment and techniques in oceanography. Projects may be done by an individual or a group. Requires an individual proposal and results written as a formal report. (Requirement: Senior standing in oceanography.)

OCN 5001 PRINCIPLES OF OCEANOGRAPHY (3 credits). A comprehensive survey of the ocean and coastal zone. An integrated study of the relationships and applications of chemical, biological, geological, physical and meteorological sciences to oceanography and ocean engineering.

OCN 5101 PRINCIPLES OF BIOLOGICAL OCEANOGRAPHY (3 credits). Includes biological aspects of the marine environment, physicochemical parameters and interrelationships between organisms and these parameters. Also discusses pollution and productivity.

OCN 5103 MARINE ZOOPLANKTON (3 credits). Detailed studies of zooplankton and relations to selected aspects of biological oceanography; study of phytoplankton-zooplankton relationships and sampling methods; lab familiarization of organisms, and field trips.
OCN 5104 MARINE BENTHOS (3 credits). Analyzes the environments, populations and communities of the deep sea and estuaries. Includes sampling methods and lab familiarization of faunal components; and field trips. (Requirement: Instructor approval or prerequisite course. Prerequisites: OCN 5100)

OCN 5106 MITIGATION AND RESTORATION OF COASTAL SYSTEMS (3 credits). Introduces students to current activities in mitigation and restoration of coastal systems. Integrate lectures, guest speakers and field trips in a case-study format to demonstrate the process of restoration planning. Students develop a mitigation plan for a hypothetical development project.

OCN 5203 ADVANCED CHEMICAL OCEANOGRAPHY (3 credits). Discusses in depth advanced chemical concepts of the oceans, such as element speciation, the physical chemistry of seawater, interactions at the air-sea interface, absorption, diffusion and radiochemistry. Prerequisites: OCN 5210.

OCN 5204 MARINE POLLUTION (3 credits). Integrates political and social concepts into the scientific study of pollution. Includes definitions of pollution, toxicity of contaminants and a number of case studies of significant marine pollution events. (Requirement: Instructor approval.)

OCN 5210 MARINE AND ENVIRONMENTAL CHEMISTRY (3 credits). The chemical composition and important reactions along the global water cycle including rain, soil and groundwater, rivers, lakes, estuaries and seawater. Includes weathering, redox processes, carbonate equilibria and nutrients, and lab exercises.

OCN 5301 PRINCIPLES OF GEOLOGICAL OCEANOGRAPHY (3 credits). Introduces the origin and evolution of the ocean basins. Reviews general biological, chemical and physical processes of the coastal and open ocean, emphasizing how they contribute to marine sedimentation and stratigraphy. Includes field trips.

OCN 5304 COASTAL AND ESTUARINE PROCESSES (3 credits). Studies physical, biogeochemical and ecological processes in coastal and estuarine environments. Processes include shoaling waves, tides and tidal currents, estuarine circulation, storm processes and transient currents. Includes implications for coastal engineering and coastal zone management. (Requirement: Prerequisite course or instructor approval.) Prerequisites: OCN 5301.

OCN 5315 MARINE GEOCHEMISTRY (3 credits). Studies the sources, transport and deposition of sediments. Examines land-derived sediments that undergo certain alterations in saline water, and the cause and nature of the modifications, as well as marine sediments that are generated by the biota and from the water column. Prerequisites: OCN 5210.

OCN 5401 PRINCIPLES OF PHYSICAL OCEANOGRAPHY (3 credits). Introduces physical oceanography including the properties of seawater, basic concepts of fluid dynamics, heat budget, atmospheric circulation, structure and circulation of the ocean, and tidal and wave motion.

OCN 5403 OCEAN WAVE THEORY (3 credits). Studies the motion of ideal fluid; damping and added mass; wave motions encountered in the ocean; surface gravity waves, internal waves and long waves in a rotating ocean; the motion of viscous fluid; the Navier-Stokes equations; boundary layer; and model testing. Prerequisites: OCN 5100.

OCN 5405 DYNAMIC OCEANOGRAPHY (3 credits). Introduces geophysical fluid dynamics and its application to the study of ocean currents. Includes linear and nonlinear models, vorticity theory and critical discussion of classical papers on ocean circulation. Prerequisites. MTH 2201, OCN 5401.

OCN 5407 MARINE METEOROLOGY (3 credits). The application of the basic laws of thermodynamics and geophysical fluid dynamics to the behavior and circulation of the atmosphere-ocean system.

OCN 5409 GEOPHYSICAL FLUID DYNAMICS (3 credits). Advanced analytical and numerical models of ocean and atmospheric mesoscale, macroscale and global-scale flows with diagnostic and prognostic applications including coupled air-sea circulation physics. (Requirement: Prerequisite course or instructor approval.) Prerequisites: MET 5305 or OCN 5405.

OCN 5704 OCEANIC REMOTE SENSING (3 credits). Radiative processes, remote sensors and sensor platforms; photogrammetry, radiometry and multispectral pattern recognition; image interpretation, data processing and applications. Also includes ocean research examples from aircraft and spacecraft.

OCN 5709 NUMERICAL ANALYSIS OF BIOLOGICAL DATA (3 credits). Application of statistical methods and computer programs to biological studies. Also includes experimental designs appropriate for statistical applications.

OCN 5801 COASTAL SYSTEMS PLANNING (3 credits). Uses systems theory to describe the physical and biological character of the coastal zone. Concepts and techniques in planning and management are the basis for the study of the use of coastal resources for recreation, transportation and waste disposal. (Requirement: Graduate standing in science or engineering, or instructor approval.)

OCN 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

OCN 5901 SPECIAL TOPICS IN OCEANOGRAPHY (1 credit). Special topics not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

OCN 5902 SPECIAL TOPICS IN OCEANOGRAPHY (2 credits). Special topics not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

OCN 5903 SPECIAL TOPICS IN OCEANOGRAPHY (3 credits). Special topics not covered in the regular curriculum. Offered on occasion to specific student groups. (Requirement: Instructor approval.)

OCN 5990 OCEANOGRAPHY SEMINAR (0 credits). Presents research and review of areas of interest by staff, students and invited speakers in the field of oceanography. (Requirement: Graduate standing in oceanography.)

OCN 5996 INTERNSHIP (0-3 credits). Application of coastal zone management principles to involve the student in actual experience with planning or other related agencies. Includes on-campus preparation, off-campus work experience and a final on-campus debriefing. (Requirement: Graduate standing in oceanography.)

OCN 5999 THESIS RESEARCH (3-6 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in the field of oceanography.

OCN 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

OCN 6993 RESEARCH IN OCEANOGRAPHY (1-3 credits). Research under the guidance of a member of the graduate faculty. Repeatable as required.

OCN 6999 DISSERTATION RESEARCH (3-12 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in the field of oceanography.

OPERATIONS RESEARCH

ORP 5001 DETERMINISTIC OPERATIONS RESEARCH MODELS (5 credits). An applied treatment of modeling, analysis and solution of deterministic operations research problems. Includes model formulation, linear programming, network flow and transportation problems and algorithms, integer programming and dynamic programming. (Requirement: At least one upper-level undergraduate math course.)

ORP 5002 STOCHASTIC OPERATIONS RESEARCH MODELS (5 credits). An applied treatment of modeling, analysis and solution of probabilistic operations research problems. Topics chosen from decision analysis, game theory, inventory models, Markov chains, queuing theory, simulation, forecasting models. (Requirement: At least one upper-level undergraduate math course, preferably probability and statistics.)

ORP 5003 OPERATIONS RESEARCH PRACTICE (3 credits). Includes OR methodology, how an OR analyst interacts with clients, and preparation and presentation of oral reports. Students form teams to analyze real cases where each student gets an opportunity to be a team leader and present oral reports. Prerequisites: ORP 5001, ORP 5002.

ORP 5010 MATHEMATICAL PROGRAMMING (3 credits). Surveys popular optimization techniques. Topics chosen from linear, integer, nonlinear, dynamic and network flow programming, combinatorial graph algorithms. (Requirement: Prerequisite course or instructor approval.) Prerequisites: MTH 5102 or ORP 5001.

ORP 5011 DISCRETE OPTIMIZATION (3 credits). Studies combinatorial optimization and integer programming. Prerequisites: MTH 5051, ORP 5001.

ORP 5020 THEORY OF STOCHASTIC PROCESSES (3 credits). Introduces stochastic models, discrete- and continuous-time stochastic processes, point and counting processes, Poisson counting process, compound Poisson processes, nonstationary Poisson processes, renewal theory, regenerative processes and Markov chains. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 5411.

ORP 5021 QUEuing THEORY (3 credits). Includes queuing processes; imbedded and continuous time parameter processes; Markov, semi-Markov and semi- regenerative processes; single-server and multiclass queues; processes of servicing unreliable machines and computer applications; and controlled stochastic models. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 5411.

ORP 5025 STOCHASTIC ANALYSIS OF FINANCIAL MARKETS 1 (3 credits). Lays the foundation for mathematical concepts widely applied in financial markets. Uses economic theory with stochastics (martingales, Wiener, Markov, Ito processes, stochastic differential equations) to derive fair option prices and hedge call options. Also uses fluctuation theory to predict stocks’ crossing of critical levels. Prerequisites: MTH 5411 or MTH 5425.
Course Descriptions

**ORP 5026 STOCHASTIC ANALYSIS OF FINANCIAL MARKETS 2** (3 credits). Offers multidimensional stochastic applied to financial markets. Continues with multivariate Ito processes and multidimensional Feynman-Kac theorems, hedging of American and exotic call options and forward exchange rates. Introduces time-sensitive analysis of stocks, and risk theory. Prerequisites: MTH 5435 or ORP 5025.

**ORP 5030 DECISION ANALYSIS** (3 credits). Covers normative models of decisions under certainty, risk and uncertainty; assessment of subjective probability and utility functions; Bayesian decision analysis and the value of information; influence diagrams; and descriptive aspects of decision making. (Requirement: Undergraduate statistics course.)

**ORP 5031 MULTIOBJECTIVE DECISION ANALYSIS** (3 credits). Covers normative models of decisions considering multijobjective and multiattribute models. Includes multijobjective utility theory, the analytical hierarchy process, linear multijobjective programming and goal programming. Prerequisites: ORP 5001, ORP 5030.

**ORP 5040 QUALITY ASSURANCE** (3 credits). Covers the principles and application of statistical quality control and statistical process control. (Requirement: Undergraduate statistics course.)

**ORP 5041 RELIABILITY ANALYSIS** (3 credits). Covers the principles of reliability analysis and assessment; reliability probability models; combinatorial and system reliability; and reliability estimation. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 5411.

**ORP 5042 RELIABILITY, AVAILABILITY AND MAINTAINABILITY** (3 credits). Discusses maintenance concepts relating to system effectiveness and support system design. Includes basic mathematical concepts, design concepts and data analysis used in quantifying availability, maintainability and reliability as measures of operational readiness and system effectiveness. Prerequisites: ORP 5041.

**ORP 5050 DISCRETE SYSTEM SIMULATION** (3 credits). Covers the principles of building and using a discrete event simulation; construction and statistical testing of random variate generators; statistical analysis and validation of results; design of simulation projects; and variance reduction methods. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 5411.

**ORP 5051 APPLIED EXPERT SYSTEMS** (3 credits). Covers the concepts and methods of rule-based expert systems; methods of knowledge representation; and use of an expert system shell to build a small expert system. Noncredit for CS majors.

**ORP 5070 SEQUENCING AND SCHEDULING** (3 credits). Bridges the gap between scheduling theory and its application in manufacturing and service environments. Emphasizes basic scheduling principles and uses selected readings and case studies to illustrate the use of these concepts in industrial environments.

**ORP 5090 SPECIAL TOPICS IN OPERATIONS RESEARCH** (1-5 credits). Content variable depending on the fields of expertise of the faculty and the desire and needs of the students.

**ORP 5091 SPECIAL TOPICS IN OPERATIONS RESEARCH 2** (3 credits). Content variable depending on the fields of expertise of the faculty and the desire and needs of the students. Prerequisites: ORP 5090.

**ORP 5899 FINAL SEMESTER THESIS** (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

**ORP 5999 THESIS RESEARCH** (3-6 credits). Individual research under the direction of a major adviser approved by the chair of the program. A maximum of six credits may be credited toward the master's degree.

**ORP 6010 ADVANCED TOPICS IN MATHEMATICAL PROGRAMMING** (3 credits). Overviews selected topics in the theory of optimization. Unifies much of the field by use of a few principles of linear vector space theory. The concepts of distance, orthogonality and convexity play fundamental roles in this development. Prerequisites: MTH 5101, MTH 5102, ORP 5010.

**ORP 6030 ADVANCED TOPICS IN DECISION MODELS** (3 credits). Discusses current methods and research in decision analysis. May include large-scale multicriteria decision analysis, behavioral analysis of decision making, methods of uncertainty representation and decision making in the public domain. (Requirement: Instructor approval or prerequisite course.) Prerequisites: ORP 5031.

**ORP 6095 PREPARATION FOR CANDIDACY/OPERATIONS RESEARCH** (1-6 credits). Research under the guidance of a member of the operations research faculty in a selected area of operations research. Repeatable as required. (Requirement: Program chair approval.)

**ORP 6899 FINAL SEMESTER DISSERTATION** (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

**ORP 6999 DISSERTATION RESEARCH** (3-12 credits). Research and preparation for the doctoral dissertation. (Requirement: Admission to doctoral candidacy.)

---

**PHYSICAL EDUCATION**

**PED 1020 INTRODUCTION TO SAILING** (1 credit). Introduces sailing small boats, and acquaints beginners with boat and sail forms and racing.

**PED 1021 ADVANCED SAILING** (1 credit). Examines advanced techniques of racing, spinnaker setting and seamanship. Prerequisites: PED 1020.

**PED 1035 INTRODUCTION TO ARCHERY** (1 credit). Emphasizes target shooting with information about its history, shooting techniques, equipment and safety.

**PED 1046 INTRODUCTION TO WEIGHTLIFTING** (1 credit). Provides a source of information about safe and reliable habits of weight training to help the student plan a personalized fitness program.

**PED 1050 INTRODUCTION TO FENCING** (1 credit). Introduces the fundamentals of fencing, including the basic elements of footwork, attack and defense.

**PED 1060 INTRODUCTION TO TENNIS** (1 credit). Develops basic tennis skills. Includes performance and the application of basic skills, rules and etiquette.

**PED 1062 ADVANCED TENNIS** (1 credit). Develops advanced tennis skills. Includes study of performance and the application of advanced skills, rules and etiquette.

**PED 1070 INTRODUCTION TO TEAM SPORTS** (1 credit). Introduces the history, basic skill techniques, rules, terminology and participation in team sports. Includes volleyball, soccer, softball, basketball, flag football, badminton and ultimate frisbee. Also focuses on the five components of health-related fitness.

**PED 1080 INTRODUCTION TO GOLF** (1 credit). Designed for beginning golfers. Teaches the fundamentals of golf. Emphasizes stance, swing and grip of the various clubs (wood, iron and putters). Also studies rules, strategy and scoring.

**PED 1081 ADVANCED GOLF** (1 credit). Emphasizes course play and stroke refinement.

**PED 1090 INTRODUCTION TO KARATE** (1 credit). Teaches the basics of Korean Karate (Tang Soo Do), including basic hand technique, foot technique, noncontact sparring and philosophy, emphasizing self-defense.

**PED 1091 ADVANCED KARATE** (1 credit). Advanced training in hand technique, foot technique and self-defense. Emphasizes mental aspects and defense against weapons, as well as board-breaking.

**PED 1154 INTRODUCTION TO OPEN-WATER DIVING** (5 credits). An introductory certification course in scuba diving that includes studies in diving physics, physiology, environment and dive safety.

**PED 1155 ADVANCED OPEN-WATER DIVING** (5 credits). A continuing education certification course for certified divers. Includes compass and natural navigation, search and recovery, spring, drift and deep diving. Prerequisites: PED 1154.

**PED 1160 INTERCOLLEGIATE ATHLETICS** (1 credit). Meets the breadth requirement for participants in any approved intercollegiate varsity team sport. Requires participation as athlete or athletics trainer for a full season of the sport. Also requires a sports journal and completion of the Intercollegiate Athletics Participation form (IAP). Should be taken during semester covering end of season.

**PED 2160 COACHING THEORY** (3 credits). Introduces the theory and applied practice of athletics coaching for prospective athletics coaches and physical education teachers. Identifies characteristics and motivations associated with athletes, components of character development, and the risk and effects of drug use, especially performance enhancing drugs. (Requirement: Sophomore standing.)

**PED 2161 CARE AND PREVENTION OF ATHLETICS INJURIES** (3 credits). Studies the procedures involved in the prevention of athletics injuries. Includes the effects and dangers of drug use, especially as they relate to performance enhancing drugs. Focuses on the coach's role in limiting the potential for injury. Emphasizes the recognition, care and treatment of injuries. Requires completion of CPR certification. (Requirement: Sophomore standing.)

**PED 3160 THEORY AND PRACTICE OF COACHING BASKETBALL** (2 credits). Prepares future basketball coaches with the knowledge, techniques and skills required to be successful. Emphasizes the development of proper training programs and specific game strategy. Includes the history of the game of basketball and the development and implementation of designed plays. Prerequisites: PED 2160.

**PED 3161 THEORY AND PRACTICE OF COACHING SOCCER** (2 credits). Prepares future soccer coaches with the knowledge, techniques and skills required to be successful. Emphasizes the development of proper training programs and specific game strategy. Includes the history of the game of soccer and the development and implementation of designed plays. Prerequisites: PED 2160.
PHY 1001 PHYSICS 1 (4 credits). Includes vectors; mechanics of particles; Newton's laws of motion; work, energy and power; impulse and momentum; conservation laws; mechanics of rigid bodies, rotation, equilibrium, fluids, heat and thermodynamics; and periodic motion. Prerequisites: MTH 1001. Corequisites: MTH 1002.

PHY 1050 PHYSICS AND SPACE SCIENCE SEMINAR (1 credit). Introduces some of the major contemporary problems and research areas in physics and space sciences.

PHY 1091 NANOSCIENCE/NANOTECHNOLOGY LAB (1 credit). Introduces science/engineering freshmen interested in careers in nanoscience research/nanotechnology to techniques of nanomaterial fabrication by thin film deposition and chemical synthesis, and sample characterization techniques like atomic force and scanning tunneling microscopes. (Requirement: Freshman status or instructor approval.) Prerequisites: CHM 1101.

PHY 1999 PHYSICAL CONCEPTS FOR CONSTRUCTION (4 credits). Presents the basic concepts of physics as an essential foundation for understanding technical ideas such as statics, structures, materials, and electrical and mechanical systems. Provides a basis in physical science required for field work in the construction industry. Prerequisites: MTH 1001.

PHY 2002 PHYSICS 2 (4 credits). Includes electricity and magnetism, Coulomb's law, electric fields, potential capacitance, resistance, DC circuits, magnetic fields, fields due to currents, induction, magnetic properties; and wave motion, vibration and sound, interference and diffraction. Prerequisites: PHY 1001.

PHY 2003 MODERN PHYSICS (3 credits). Includes quantum mechanics of atoms, molecules, nuclei, solids and fundamental particles. Planck and de Broglie's laws, the Bohr model of hydrogen, elementary examples of Schrödinger's equation, relativity, elementary particles and symmetry, quantum electrodynamics and chromodynamics. Prerequisites: MTH 2001 or MTH 2201, PHY 2002.

PHY 2091 PHYSICS LAB 1 (1 credit). Experiments to elucidate concepts and relationships presented in PHY 1001, to develop understanding of the inductive approach and the significance of a physical measurement, and to provide some practice in experimental techniques and methods. Corequisites: PHY 1001 or PHY 1999.

PHY 3035 QUANTUM MECHANICS (4 credits). Schrödinger equation, the uncertainty principle, one-dimensional potentials, harmonic oscillator, operator methods, tunneling, angular momentum and spin. Discusses three-dimensional problems, such as one-electron atom and N-particle systems. Introduces approximation techniques, including perturbation theory. Prerequisites: PHY 2200, PHY 2003.

PHY 3060 THERMODYNAMICS, KINETIC THEORY AND STATISTICAL MECHANICS (4 credits). Includes temperature, heat and heat engines, work, internal energy, entropy, laws of thermodynamics, thermodynamic potentials, equations of state, phase changes, viscosity, thermal conductivity, diffusion, Boltzmann, Fermi-Dirac and Bose-Einstein statistics and partition functions. Prerequisites: PHY 2003.

PHY 3152 ELECTRONIC MEASUREMENT TECHNIQUES (4 credits). Includes modern electronic measurement and data collection methods, circuit analysis, integrated and digital circuits, noise reduction techniques, signal conditioning in experimental physics and computer interfacing. Includes a laboratory section considering the design, construction and testing of analog and digital circuits. Prerequisites: PHY 2002.

PHY 3440 ELECTROMAGNETIC THEORY (3 credits). Includes geometry of static electric and magnetic fields, electric charges and currents, calculating electric and magnetic fields from potentials, static electric and magnetic fields inside matter, Faraday's Law of Induction and Maxwell's Equations, and propagation and radiation of electromagnetic waves. Prerequisites: MTH 2001, PHY 2002.

PHY 3901 RESEARCH EXPERIENCE IN PHYSICS (1 credit). Individual research directed by a faculty member. May not be used in place of any named courses in the major program. Requires the preparation and presentation of a report on the research. May be repeated for a maximum of four credits. (Requirements: GPA of 3.0 or higher, sophomore or higher standing, and instructor and department head approval.)

PHY 4020 OPTICS (3 credits). Applications to physics, space sciences and engineering. Includes geometrical optics (briefly), physical optics including Fraunhofer and Fresnel diffraction, interactions with dielectric materials; Fresnel equations; and applications including lasers, holography, polarization and nonlinear optics materials. (Requirement: Instructor approval or prerequisite course.) Prerequisites: MTH 2201, PHY 2002.

PHY 4021 EXPERIMENTS IN OPTICS (1 credit). Includes basic optical systems, interference and diffraction. Studies interferometers, spectrometers, lasers and detectors. Enrollment limited to physics and space sciences majors, and on a space-available basis to electrical engineering majors with an emphasis in electrooptics. Corequisites: PHY 4020.

PHY 4030 INTRODUCTION TO SUBATOMIC PHYSICS (3 credits). Introduces elementary particles, fundamental forces, nuclear structure and reactions. Includes classification and properties of particles (the Standard Model) and nuclei, particle interactions, nuclear models, nuclear decays, radiation and particle detection. Prerequisites: PHY 3035.

PHY 4033 INTRODUCTION TO SOLID STATE PHYSICS (3 credits). Includes crystal structure, crystal diffraction and the reciprocal lattice, crystal binding; lattice vibrations, phonons, thermal properties of insulators; free electron Fermi gas, energy bands in metals, and Fermi surfaces. Prerequisites: PHY 3035, PHY 5001.

PHY 4071 SENIOR LAB (2 credits). Experiments in optics and atomic nuclear and solid state physics. (Requirement: Senior standing in physics or space sciences.)

PHY 4200 SENIOR SEMINAR 1 (1 credit). Reports and discussions on selected topics in contemporary experimental and theoretical physics and space sciences. (Requirement: Student must be within three semesters of graduation.) (Q)

PHY 4201 SPECIAL TOPICS IN PHYSICS (5 credits). Topics announced prior to each course offering. (Requirement: Department head approval.)

PHY 4210 SENIOR SEMINAR 2 (1 credit). Reports and discussions on selected topics in contemporary experimental and theoretical physics and space sciences. (Requirement: Student must be within three semesters of graduation.) (Q) Prerequisites: PHY 4200.

PHY 4301 INDEPENDENT STUDIES (1-3 credits). Individual study of specific problems in physics. (Requirement: Department head approval.)

PHY 4901 UNDERGRADUATE RESEARCH (3 credits). Individual research directed by a faculty member. (Requirement: Department head approval.)

PHY 4902 UNDERGRADUATE RESEARCH (3 credits). Individual research directed by a faculty member. (Requirement: Department head approval.)

PHY 5015 ANALYTICAL MECHANICS 1 (3 credits). A general treatment of dynamics of particles and rigid bodies, rotational dynamics, potential theory, Hamilton's principle and principle of least action, Lagrange's equations; and applications. Prerequisites: PHY 3011.

PHY 5017 ELECTROMAGNETIC THEORY 1 (3 credits). Includes electrodynamics, boundary-value problems in electrostatics, multipole fields, electrostatics and macroscopic media, dielectrics, magnetostatics, Faraday's law, Maxwell equations, plane electromagnetic waves and wave propagation.

PHY 5018 ELECTROMAGNETIC THEORY 2 (3 credits). Continues PHY 5017. Includes radiating systems, multipole fields and radiation, scattering and diffraction, special theory of relativity, dynamics of relativistic particles and electromagnetic fields, scattering of charged particles, Cherenkov radiation, radiation by moving charges, Bremsstrahlung and radiation damping. Prerequisites: PHY 5017.

PHY 5020 OPTICS (3 credits). Applications to physics, space sciences and engineering. Includes geometrical optics (briefly), physical optics, including Fraunhofer and Fresnel diffraction; interactions with dielectric materials; Fresnel equations; and applications including lasers, holography, polarization and nonlinear optics materials. Additional graduate-level projects will be assigned including computer ray tracing and computer lens design.

PHY 5030 QUANTUM MECHANICS 1 (3 credits). Schrödinger equation, discrete and continuous eigenfunctions and eigenvalues, collision theory, matrix mechanics, angular momentum perturbation and other approximation methods, identical particles and spin, semiclassical theory of radiation, atomic structure. Prerequisites: MTH 5201, MTH 5202, PHY 3035.

PHY 5031 QUANTUM MECHANICS 2 (3 credits). Continues PHY 5030. Introduces elementary particles, fundamental forces, nuclear structure and reactions. Includes classification and properties of particles (the Standard Model) and nuclei, particle interactions, nuclear models, nuclear decays, radiation and particle detection. Prerequisites: PHY 5030.

PHY 5035 SOLID STATE PHYSICS 1 (3 credits). Includes crystal structure, crystal diffraction and the reciprocal lattice, crystal binding, lattice vibrations, phonons, Brillouin zones, thermal properties of insulators, free electron Fermi gas, energy bands in metals and Fermi surfaces. Prerequisites: PHY 3035, PHY 5001.

PHY 5036 SOLID STATE PHYSICS 2 (3 credits). Continues PHY 5035. Includes semiconductors, plasmons, optical properties of solids, dielectrics, magnetism, defects and superconductivity. Prerequisites: PHY 5035.

PHY 5045 INTRODUCTION TO ELEMENTARY PARTICLE PHYSICS (3 credits). The fundamental laws and principles that govern the behavior and structure of matter on the subatomic scale. Definition and classification of elementary particles and fundamental forces; properties of elementary particles and their experimentally observable behavior; symmetries and invariance principles; Feynman diagrams; interaction of particles with bulk matter. Prerequisites: PHY 4030.
PSY 5070 SPECIAL TOPICS IN PHYSICS (3 credits). Topics announced prior to each course offering. (Requirement: Department head approval.)

PSY 5082 THERMODYNAMICS AND STATISTICAL PHYSICS (3 credits). Covers the principles and applications of statistical thermodynamics, thermal and general interactions of macroscopic systems and parameter measurement. Also includes basic methods and applications of statistical mechanics, equilibrium conditions, quantum statistics of ideal gases, and the kinetic theory of transport and irreversible processes. (Requirement: Prerequisite course or instructor approval.) Prerequisites: PHY 3060.

PHY 5088 GRADUATE LAB (3 credits). Experimental work under individual faculty supervision. (Requirement: Department head approval.)

PHY 5089 GRADUATE LAB (3 credits). Experimental work under individual faculty supervision. (Requirement: Department head approval.)

PHY 5095 ADVANCED LAB (3 credits). Experimental work at the research level in faculty research labs. (Requirement: Department head approval.)

PHY 5096 ADVANCED LAB (3 credits). Experimental work at the research level in faculty research labs. (Requirement: Department head approval.)

PHY 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

PHY 5999 THESIS (3-6 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in physics. (Requirement: Department head approval.)

PHY 6001 INDIVIDUAL STUDIES (1-3 credits). Individual studies under faculty supervision. (Requirement: Department head approval.)

PHY 6090 RESEARCH (1-6 credits). Research leading to the doctoral dissertation. (Requirement: Department head approval.)

PHY 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

PHY 6999 DISSERTATION (3-12 credits). Preparation of doctoral dissertation. (Requirement: Admission to candidacy for doctoral degree and department head approval.)

FORENSIC PSYCHOLOGY

PSF 2551 SURVEY OF FORENSIC PSYCHOLOGY (3 credits). Surveys the psychological theories and methods pertinent to the legal and criminal justice systems. Includes victimization, reliability of eyewitness testimony, jury selection, treatment vs. incarceration, insanity, family and drug court issues, and trial testimony. Also explores research and training roles in relation to the justice system. (SS) Prerequisites: PSY 1411, SOC 1511.

PSF 3511 INTRODUCTION TO CRIME ANALYSIS (3 credits). Presents the techniques, materials and methods of analysis of crime and criminal activity. Concentration areas include analyzing crime, forecasting criminal occurrences, mapping techniques, crime patterns, suspect identification and monitoring crime trends. (SS) Prerequisites: PSF 2551, PSY 2512.

PSF 3512 FORENSIC BEHAVIOR INVESTIGATION AND IDENTIFICATION (3 credits). Explores the behavior of victims, suspects and witnesses of crime with respect to the psychological principles used in investigation; in particular kinesics, interview techniques, reliability of recall and legal implications of interview techniques. Prerequisites: PSF 2551.

PSF 3513 SPECIAL TOPICS IN FORENSIC PSYCHOLOGY (1 credit). Offers topics of particular general interest in forensic psychology, criminal justice or criminology when student interest and staffing permit. May be repeated for a maximum of four credits. Prerequisites: PSF 2551.

PSF 3551 INTEGRATED THEORIES OF CRIME (3 credits). Explores the basic questions concerning human nature, human behavior, crime and criminality from the perspectives of sociological, psychological and criminological theories. (SS) Prerequisites: PSF 2551 or PSY 3100.

PSF 4106 CRISIS AND CONFLICT RESOLUTION (3 credits). Examines crisis and conflict resolution in interpersonal and organizational contexts. Uses theory from behavioral and social sciences to assess, manage and resolve crisis and conflict situations in a criminal justice environment. Includes nature of and responses to crisis and conflict, and strategies for resolving them. (Requirement: Third-year standing in University Alliance.) Prerequisites: CRM 3012 or PSY 3012.

PSF 4107 COURTROOM PSYCHOLOGY (3 credits). Uses psychological processes and concepts to investigate components of the American legal system. Discusses decision processes of police officers, prosecutors, defense lawyers, judges and juries. Also covers courtroom procedures, rules of evidence and relevant research. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CRM 2702, CRM 3246.

PSF 4515 ADVANCED SPECIAL TOPICS IN FORENSIC PSYCHOLOGY (1 credit). Offers topics of particular general interest in forensic psychology, criminal justice or criminology when student interest and staffing permit. May be repeated for a maximum of three credits. (Requirement: Junior standing.) Prerequisites: PSF 2551.

PSF 4551 PRINCIPLES OF INDIVIDUAL AND COMMUNITY ADVOCACY (3 credits). Explores the response to crime by law enforcement, the court system, social services and victim advocates. Primarily focuses on advocacy for individuals and the community. Examines domestic violence, crime prevention, delinquency, hate crimes and substance abuse in terms of best practices from the field. (Requirement: Junior standing.) Prerequisites: PSY 1411.

PSF 4562 FORENSIC CLINICAL PSYCHOLOGY (3 credits). Overviews forensic clinical psychology, including forensic interviewing and assessment of children and adults, treatment of offenders and victims, legal procedures involving the interaction of clinical psychologists with the justice system, and expert testimony by mental health professionals. (Requirement: Junior standing.) Prerequisites: PSY 1411, PSY 3761.

PSF 4591 CRITICAL ISSUES IN FORENSIC PSYCHOLOGY (3 credits). Examines contemporary and critical issues in forensic psychology that are central to theoretical and applied areas of the field, such as racial profiling, sex crimes, jury consulting, correctional psychology, kinesics and advanced interviewing, international crime and terrorism. Prerequisites: PSF 3551.

PSF 4791 CRITICAL ISSUES IN CHILD ADVOCACY (3 credits). Covers the history, comparative perspectives and legal framework as apply to the responses to child maltreatment. Addresses the necessary skills needed to work as a child advocate. Also includes other issues pertaining to child maltreatment. (Requirement: Junior standing.) Prerequisites: PSY 3511.

PSYCHOLOGY

PSY 1400 FRESHMAN SEMINAR (1 credit). Offers discussions by members of the faculty about various areas of research in and practice of psychology to give freshmen an overview of the nature of the field and the people in it. (Requirement: Must be enrolled in the School of Psychology.)

PSY 1411 INTRODUCTION TO PSYCHOLOGY (3 credits). Overviews psychological processes, including both areas in which psychology is a natural science (physiological psychology, sensation and perception, basic learning and cognition) and a social science (motivation, human development, personality, social interaction, psychopathology and psychotherapy). (SS)

PSY 1461 PSYCHOLOGY OF ADJUSTMENT AND PERSONAL GROWTH (3 credits). Examines the relevance of psychological understanding in personal and interpersonal situations, including definitions and discussions of human adjustment factors, such as anxiety, stress, coping mechanisms and psychological adaptation. (SS)

PSY 1462 SUBSTANCE ABUSE (3 credits). Examines experimental evidence on the physical, psychological and psychological effects of drug use and conclusions relating to the real vs. alleged effects of drugs. (SS)

PSY 1463 HUMAN SEXUALITY (3 credits). Integrates and presents biological, psychosocial and cultural aspects of human sexuality within the context of the most recent research findings. (SS)

PSY 2000 LIFESPAN DEVELOPMENT AND PSYCHOLOGY (3 credits). Surveys the various psychological, biological and other interdisciplinary areas of human development. Also covers changes over the entire human life span. (Requirement: Must be enrolled in University Alliance.) Prerequisites: PSY 1411.

PSY 2413 RESEARCH EXPERIENCE (1 credit). Offers research experience under the direction of a member of the psychology faculty, generally in the context of programmatic research teams. May be repeated for a maximum of three credits. Prerequisites: PSY 1411.

PSY 2442 ADULT DEVELOPMENT AND AGING (3 credits). Introduces current information and psychological research on aspects of adult development, old age and aging. Examines the intellectual, motivational, psychological, social, performance and personality changes that occur in adulthood and old age. (SS) Prerequisites: PSY 1411.

PSY 2444 CROSS-CULTURAL AND ETHNIC PSYCHOLOGY (3 credits). Examines the relationship between cultural variables and psychological processes from both a psychological and an anthropological perspective. Addresses cultural, international and ethnic issues. (SS) Prerequisites: PSY 1411.

PSY 2445 PSYCHOLOGY OF WOMEN (3 credits). Examines the way gender differences affect the lives of women. Studies biological, cultural and social factors in terms of their direct effects on women, and in terms of the psychological and cultural bases of prejudice and discrimination. (SS) Prerequisites: PSY 1411.

PSY 2446 SPORT PSYCHOLOGY (3 credits). Surveys the theory, research and applications of psychology pertaining to exercise and sports. Presents current topics and issues relevant to sport psychology. (SS) Prerequisites: PSY 1411.
PSY 2512 PSYCHOLOGY RESEARCH METHODS AND STATISTICS 1 (4 credits). Introduces foundational concepts in quantitative behavioral research methods, including theory building, reliability, validity, sampling and ethics. Covers measurement and descriptive statistics, hypothesis testing, elementary inferential statistics and computer data analysis. Prerequisites: CSE 1301, PSY 1411.

PSY 2541 GROUP BEHAVIOR (3 credits). Considers issues of group development, socialization, productivity, decision making and leadership. Emphasizes the application of scientific theory and research to the study of group dynamics in real world group situations. Includes cult and crowd phenomena, social loafing, group therapy, work groups and sports teams. (SS) Prerequisites: PSY 1411.

PSY 3012 RESEARCH METHODS IN APPLIED PSYCHOLOGY (3 credits). Introduces basic research methods in applied psychology. Includes experimental research design, quantitative and qualitative approaches to data analysis, and interpretation and critiquing. (Requirement: Must be enrolled in University Alliance.) Prerequisites: EST 2703, PSY 1411.

PSY 3013 APPLIED PSYCHOLOGY (3 credits). Examines the various major concepts of applied psychology. Includes theoretical perspectives, empirical findings, historical trends, principles and practices as they apply to personal, social and organizational issues. (Requirement: Third-year standing in University Alliance.) Prerequisites: PSY 1411.

PSY 3100 LAW AND PSYCHOLOGY (3 credits). Introduces the major concepts, theoretical perspectives, empirical findings, historical trends, principles and practices of various areas of psychology and explores their intersection with the law. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CRM 3012 or PSY 3012.

PSY 3344 MULTICULTURAL ISSUES (3 credits). Covers how to recognize, understand and respect the complexity, key concepts, theoretical perspectives and empirical findings of sociocultural and international diversity. (Requirement: Must be enrolled in University Alliance.) Prerequisites: CRM 3012 or PSY 3012.

PSY 3400 JUNIOR SEMINAR (1 credit). Offers discussions by members of the faculty about new developments in psychology and career opportunities in the field. (Requirement: Junior standing in psychology.)

PSY 3413 SPECIAL TOPICS IN PSYCHOLOGY (3 credits). Topics of special interest when student interest and staffing permit. May be repeated for a maximum of six credits, provided the topics change. Prerequisites: PSY 1411.

PSY 3414 SPECIAL TOPICS IN PSYCHOLOGY (1 credit). Topics of special interest when student interest and staffing permit. May be repeated for a maximum of two credits, provided the topics change. Prerequisites: PSY 1411.

PSY 3421 PSYCHOLOGY OF LEARNING AND MOTIVATION (3 credits). Studies the principles of learning and motivation based primarily on research in classical and instrumental conditioning. Focuses on procedures, theories and applications. (SS) Prerequisites: PSY 1411.

PSY 3423 PHYSIOLOGICAL PSYCHOLOGY (3 credits). Studies the biological bases of human behavior, including in-depth treatment of nervous system anatomy and physiology, and the biological concepts underlying emotion, motivation, learning and memory. Prerequisites: BIO 1020 or EDS 1022 or EDS 1032, PSY 1411.

PSY 3441 SOCIAL PSYCHOLOGY (3 credits). Surveys the areas of social psychology as it has evolved in American psychology, including its history, methods and theories of intrapersonal, interpersonal and group behavior. Reviews sociological approaches to social psychology and cultural processes that affect social phenomena. (Requirement: Third-year online or junior standing.) (SS) Prerequisites: PSY 1411.

PSY 3442 PSYCHOLOGY OF PERSONALITY (3 credits). Overviews the major theoretical approaches to personality development and research in the field. (SS) Prerequisites: PSY 1411.

PSY 3512 INTERVIEWING AND ASSESSMENT TECHNIQUES (3 credits). Theory, application and interpretation of interviewing and objective testing methods used in clinical, industrial and forensic settings. Offers measurement theory as the basis for objective testing. Prerequisites: BUS 2703, PSY 2511 or PSY 2512.

PSY 3513 PSYCHOLOGICAL RESEARCH METHODS AND STATISTICS 2 (4 credits). Provides in-depth analysis of correlational and experimental research design, survey research and laboratory procedures. Introduces analysis of between and repeated design experimental data using analysis of variance. Includes a laboratory component in which students perform all phases of a research project. Prerequisites: PSY 2512.

PSY 3522 HUMAN COGNITION: THEORY AND APPLICATION (3 credits). Reviews models, processes and research in information processing, attention, short- and long-term memory, memory codes, visualization and imagery, forgetting, semantic organization, problem solving, decision making, language, multilingualism, music, audition and cognitive development. Prerequisites: PSY 2511 or PSY 2512 or PSY 3012.

PSY 3524 SENSATION AND PERCEPTION (3 credits). Reviews models, processes and empirical research concerning the modalities of vision, audition, taste, smell and touch/feel. Explores how perception gives rise to our subjective experience and the quality of conscious awareness. Prerequisites: PSY 2511 or PSY 2512.

PSY 3531 CHILD PSYCHOLOGY (3 credits). Examines psychological principles, theories and research pertaining to the developing child from conception through early adolescence. Includes biological and environmental influences on affective, cognitive, moral and social development. (SS) Prerequisites: PSY 1411.

PSY 3541 PSYCHOLOGY OF LEADERSHIP (3 credits). Examines the research and application of the essential competencies of effective leadership such as managing conflict, facilitating communication and leading groups and teams. ( Requirement: Third-year online or junior standing.) Prerequisites: PSY 1411.

PSY 3542 SURVEY OF INDUSTRIAL/ORGANIZATIONAL PSYCHOLOGY (3 credits). Surveys the application of psychological principles and methods to work. Includes employee selection, motivation, performance and behavior; the structure and function of occupational positions and activities; and the nature, processes and development of organizations. (SS) Prerequisites: CRM 3012 or PSY 2512 or PSY 3012.

PSY 3551 INTRODUCTION TO CHILD ADOCACY (3 credits). Introduces students to the history of child advocacy, comparative perspectives, legal framework and other interdisciplinary issues pertaining to child maltreatment, response and advocacy. Prerequisites: PSY 3531.

PSY 3561 ABNORMAL PSYCHOLOGY (3 credits). Examines psychological disorders, including theories for their development, symptomatology and system of classification. (Requirement: Junior standing.) (SS) Prerequisites: PSY 1411.

PSY 3999 SCHOLARLY PROJECT PLANNING SEMINAR (1 credit). Facilitates and instructs regarding internship selection, application, and planning and proposing the scholarly inquiry project as related to the internship. First of a three-course QEP internship sequence. (Q) Prerequisites: PSY 2513.

PSY 4000 FIELD INTERNSHIP AND RESEARCH PROJECT (3 credits). Consists of the experiential component of placement at a work site and the scholarly inquiry project data collection. Second of a three-course QEP internship sequence. (Q) Prerequisites: PSY 3999.

PSY 4001 APPLIED RESEARCH ANALYSIS SEMINAR (1 credit). Analyzes and develops the data collected during internship into a scholarly project, culminating in an internship colloquium. Third of a three-course QEP internship sequence. (Q) Prerequisites: PSY 4000.

PSY 4101 HUMAN FACTORS (3 credits). Examines key concepts, applications, theoretical perspectives and empirical findings of engineering psychology across various applied settings where humans and machines interact. (Requirement: Must be enrolled in University Alliance.) Prerequisites: PSY 3522.

PSY 4112 APPLIED TESTS AND MEASURES (3 credits). Examines the key concepts, principles and construction of measures. Focuses on the criticality of reliability and validity. (Requirement: Must be enrolled in University Alliance.) Prerequisites: PSY 3012.

PSY 4242 ORGANIZATIONAL PSYCHOLOGY AND BEHAVIOR (3 credits). Examines the key concepts, applications, theoretical perspectives and empirical findings of organizational effectiveness on human behavior. (Requirement: Must be enrolled in University Alliance.) Prerequisites: PSY 3542.

PSY 4302 HUMAN-COMPUTER INTERACTION (3 credits). Introduces key concepts, applications, theoretical perspectives and empirical findings of human-computer interaction across various applied settings. (Requirement: Must be enrolled in University Alliance.) Prerequisites: PSY 4011.

PSY 4411 INTERNSHIP (3 credits). Offers 15-week field placement under supervision to provide students with an opportunity for direct experience in an area of applied psychology. May be repeated for a maximum of six credits, provided internship sites change. (Requirement: Senior standing.)

PSY 4413 UNDERGRADUATE RESEARCH (3 credits). Offers research experience under the direction of a member of the psychology faculty. May be repeated for a maximum of six credits. (Requirement: Instructor approval.) Prerequisites: PSY 2513.

PSY 4461 ABNORMAL PSYCHOLOGY (3 credits). Examines psychological disorders, including theories of their development, symptomatology and systems of classification. (SS) Prerequisites: PSY 3442.

PSY 4462 CLINICAL AND COMMUNITY PSYCHOLOGY (3 credits). Overviews clinical psychology and community psychology. Reviews methods of clinical assessment and treatment of behavioral disorders. Presents the concepts of community psychology as they have developed from the fields of psychology, social work and public administration. (SS) Prerequisites: PSY 3761.

PSY 4465 INTRODUCTION TO APPLIED BEHAVIOR ANALYSIS (4 credits). Applies operant and respondent conditioning processes to the modification of human behavior in business, community, education and clinical settings. Includes analysis of situational components, measurement of behavior, application of behavior change techniques and understanding the significance of results. Prerequisites: PSY 3421.

Florida Tech
PSY 4466 BEHAVIOR TRAINING TECHNIQUES IN CLINICAL AND EDUCATIONAL SETTING (3 credits). Applies operant and respondent conditioning processes and skill training to the modification of patient behavior in residential treatment and school settings. Includes analysis of the situational components, measurement of behavior, and application of behavior change techniques. Prerequisites: PSY 4465.

PSY 4511 PRINCIPLES OF PROGRAM DEVELOPMENT AND EVALUATION (3 credits). The psychological principles, methods and techniques used to assess, develop and evaluate the effectiveness of programs. Includes needs assessment methods, principles of program design, gaining support for programs and general methods for evaluating programs. Prerequisites: CRM 3012 or PSY 2513 or PSY 3012.

PSY 4512 PERSONAL AND PROFESSIONAL DEVELOPMENT (3 credits). Explores realistic goals for implementation of psychological knowledge, skills, abilities and values in educational and professional settings in a variety of settings that meet personal goals. Also includes how these goals may meet societal needs. (Requirement: Fourth-year standing in University Alliance.)

PSY 4515 PSYCHOLOGY HONORS THESIS (3 credits). Includes the preparation of an undergraduate thesis under supervision of a faculty member. Includes all components of the research process, including conceptualization, literature review, method and hypothesis development, data collection and analysis, and preparation of the final document. May be repeated for a total of six credits. (Requirement: Acceptance to psychology honors program.) (Q) Prerequisites: PSY 2513.

PSY 4521 ANIMAL LEARNING AND BEHAVIOR (3 credits). Surveys major topics including learning vs. unlearned behavior, communication, reproduction, cognition, social behavior and tool use. Explores evolutionary, genetic and environmental perspectives to understand behavior. Prerequisites: BIO 1020 or EDS 1032, PSY 1441, PSY 2511 or BIO 2601 or PSY 2512.

PSY 4541 CULTURE AND PSYCHOLOGY (3 credits). Presents a theoretical basis for understanding the relationship between psychology and social science fields involving cultural studies, including cross-cultural psychology, psychological anthropology, cultural psychology, psychological sociology, ethnicity and multiculturalism. Emphasizes quantitative research methodology in these fields. (Requirement: Senior standing and instructor approval.) (SS) Prerequisites: PSY 2513, PSY 3441, PSY 3442.

PSY 4590 PSYCHOLOGY HONORS SEMINAR (1 credit). Discusses theoretical and empirical research in psychology and related fields in a seminar format. May be repeated for a total of four credits. (Requirement: Acceptance to psychology honors program and department approval.)

PSY 4612 EMPLOYMENT AND PERSONALITY TESTING (3 credits). Explores the application, psychometrics and legal considerations of tests and measures in applied settings. Includes personality, cognition and other forms of selection testing. (Requirement: Must be enrolled in University Alliance.) Prerequisites: PSY 4112.

PSY 4712 PROFESSIONAL AND ETHICAL ISSUES (3 credits). Examines and discusses the value of empirical evidence, tolerance of ambiguity, ethical behaviors (including the APA Ethics Code) and other values that underpin psychology as a science. (Requirement: Fourth-year standing in University Alliance.)

PSY 5000 CLINICAL COLLOQUIUM (0 credits). Provides speakers from the faculty, community and student body, covering a wide spectrum of psychological topics and areas of interest. Required for all PSy.D. students each fall and spring semester of their enrollment, with the exception of the internship year.

PSY 5002 PRE-PRACTICUM (1 credit). Provides foundation skills and knowledge in preparation for practical training. Involves both didactic methods and opportunities to observe and shadow clinicians/advanced students in practice. Serves as an adjunct to PSY 5541 and PSY 5542.

PSY 5101 STATISTICAL RESEARCH METHODS 1 (3 credits). Introduces psychological research methods and designs, including analysis and interpretation of simple correlational and experimental designs.

PSY 5102 STATISTICAL RESEARCH METHODS 2 (3 credits). Analyzes multifactor research designs using analysis of variance and related techniques, including the use of computerized statistical packages and data analysis. Prerequisites: PSY 5101.

PSY 5105 BIOLOGICAL FOUNDATIONS OF BEHAVIOR (3 credits). Emphasizes physiology and pharmacology of the synapse, neurotransmitter, sensory system and complexly motivated behavior. Views normal and abnormal behavior within the biological context and also addresses ethnic, racial and sex-role diversity.

PSY 5106 LIFE-SPAN DEVELOPMENT (3 credits). Overviews psychological principles, theories and research pertaining to human development from conception to death. Studies physical, cognitive, emotional, social and personality development with emphasis on theories, empirical data, research methods, and current issues.

PSY 5108 HEALTH PSYCHOLOGY (3 credits). Overviews the application of psychological theory and technology to the understanding of etiology and treatment of disease, to the maintenance of health, and to the role of the psychologist within the healthcare system. Gives attention to prevention and wellness programs and to emerging theoretical models of the psychophysiological connection. Prerequisites: PSY 5105.

PSY 5113 PROGRAM EVALUATION (3 credits). Tactics of scientific research, particularly as they apply to conducting and evaluating psychological service programs. Prerequisites: PSY 5102.

PSY 5115 HISTORY AND SYSTEMS OF PSYCHOLOGY (2 credits). Covers major historic trends leading to modern psychology, including 16th and 17th century philosophers, 18th and 19th century brain and sensory physiologists, the school of psychology that emerged in the late 1800s and early 1900s, and more modern trends in major content areas of psychology, most notably learning and personality.

PSY 5116 COGNITIVE AND AFFECTIVE BASES OF BEHAVIOR (3 credits). Investigates cognitive bases through stimulus-response learning approaches, information processing and network theories of memory. Studies associative learning in affective behavior to conceptualize intervention approaches. Intertwines biological and cognitive theories of emotion. (Requirement: Graduate standing.)

PSY 5120 CULTURE AND PSYCHOLOGY (3 credits). Presents a theoretical basis for understanding the relationship between psychology and cultural studies. Also presents theory and research from cross-cultural psychology, psychological anthropology, cultural psychology, psychological sociology and ethnic studies.

PSY 5121 CULTURAL AND SOCIAL PSYCHOLOGY (3 credits). Reviews theory and research in cultural and social psychology and in the social sciences in order to develop an integrated conception of the individual within social, cultural, institutional and societal contexts. Presents applications of cultural and social theory to clinical and industrial/organizational psychology.

PSY 5122 CROSS-CULTURAL THEORY AND RESEARCH METHODS (3 credits). Explores students to a theoretical overview of cross-cultural theory and research methods. Also includes a more in-depth understanding of conducting, analyzing and interpreting data in a cross-cultural framework. (Requirement: Graduate standing in industrial/organizational psychology or program chair approval.) Prerequisites: PSY 5120.

PSY 5142 ORGANIZATIONAL CONSULTING SKILLS (3 credits). Overviews practical consulting skills, consulting models, types of consulting and consulting competencies in the context of the contemporary business and nonprofit environment. Includes small-group work, panel and class discussion, participation in a business simulation and case studies. Requires an oral presentation and learning journal.

PSY 5191 DIRECTED READINGS IN PSYCHOLOGY (1-3 credits). Selected readings in a specific topic under the direction of a faculty member. Can be repeated for a total of three credits. (Requirement: Program chair approval.)

PSY 5192 SEMINAR IN PSYCHOLOGY (1 credit). Reports and discussion on current research and practice by students, faculty and visiting psychologists. (Requirement: Instructor approval.)

PSY 5194 SEMINAR IN PLAY THERAPY (1 credit). Provides students with knowledge of the theory and purpose of play therapy, as well as basic skills in techniques of play therapy. Explores the research on the efficacy of play therapy as a treatment for children's disorders. Prerequisites: PSY 5595.

PSY 5197 SUPERVISED RESEARCH (0 credits). Directed research under the supervision of a member of the psychology faculty in a selected area of psychology. May be repeated. (Requirement: Program chair approval.)

PSY 5198 SUPERVISED RESEARCH (1-3 credits). Directed research under the supervision of a member of the psychology faculty in a selected area of psychology. Can be repeated for a maximum of six credits. (Requirement: Program chair approval.)

PSY 5401 INTRODUCTION TO INDUSTRIAL AND ORGANIZATIONAL PSYCHOLOGY (3 credits). Introduces major topics in personnel psychology and organizational behavior, including job analysis, personnel selection, training and performance appraisal, social influences on work behavior, job satisfaction, worker motivation, leadership and organizational communication.

PSY 5402 TESTS AND MEASUREMENTS (3 credits). Introduces psychometric theory, survey of psychological testing and applications to business and industry.

PSY 5403 APPLIED RESEARCH METHODS (3 credits). Experience in the research methodology as applied to workplace problems. Emphasizes correlational and regression analysis, survey methodology and problems encountered analyzing real-world data.
PSY 5411 PERSONNEL SELECTION (3 credits). Examines current approaches to selection in industry. Focuses on attracting, selecting and placing personnel.

PSY 5412 PERFORMANCE APPRAISAL (3 credits). Studies the application, research and theory in the performance appraisal area. Special emphasis on appraisal skills.

PSY 5413 PERSONNEL LAW (3 credits). Presents ethical guidelines and legal requirements in general and as they apply to I/O psychology.

PSY 5415 ORGANIZATIONAL PSYCHOLOGY (3 credits). Overviews organizational theories and their relationship to organizational effectiveness. Includes work motivation, organizational attitudes, group processes, leadership and organizational theory.

PSY 5420 ORGANIZATIONAL CHANGE AND TRANSFORMATION (3 credits). Overviews the incremental evolutionary and discontinuous aspects of organizational change. In addition to reviewing modern transformational theories, gives practical experience in conducting organizational change interventions.

PSY 5421 INDUSTRIAL TRAINING (3 credits). Examines the methods and applications of training in industry from an integrated systems approach.

PSY 5422 GROUP AND TEAM DEVELOPMENT (3 credits). Surveys major interventions associated with group and team development within organizations. Interventions include group and team assessment, creative problem solving, decision making, resolving conflicts and management by objectives.

PSY 5420 EMOTIONS IN THE WORKPLACE (3 credits). Covers theory and research on emotions in the workplace. Example topics include the nature of emotional display rules, the influence of emotions on job attitudes, frameworks of emotional intelligence, and the strategies that employees use to regulate their emotional displays at work. (Requirement: Program director approval.)

PSY 5431 WORK MOTIVATION (3 credits). Focuses on major theoretical issues and applications related to motivation in organizations. (Requirement: Department head approval.)

PSY 5432 OCCUPATIONAL HEALTH PSYCHOLOGY (3 credits). Examines research and theory related to the physical, mental and social well-being of employees. Includes work-family balance, occupational stress, job-related burnout, and workplace safety issues and violence.

PSY 5492 CURRENT TOPICS IN I/O PSYCHOLOGY (1 credit). Focuses on current practice and research by visiting faculty in the areas of industrial/organizational psychology, including job analysis, stress and workplace counseling.

PSY 5496 PRACTICUM IN I/O PSYCHOLOGY (1-6 credits). Supervised work in appropriate I/O setting. (Requirement: Program chair approval.)

PSY 5501 PERSONALITY AND PSYCHOTHERAPY (3 credits). Surveys and evaluates the major theories of personality and psychotherapy with a didactic introduction to the basic principles of case conceptualization and psychological treatment.

PSY 5502 PSYCHOPATHOLOGY (3 credits). Introduces the classification and diagnosis of the major forms of behavioral and mental pathology and their relationship to models of psychotherapy. Prerequisites: PSY 5501.

PSY 5511 CLINICAL PSYCHOPHARMACOLOGY (3 credits). The role of drugs in the modification of behavior. Examines sites of drug action, the systems affected and the rationale for drug therapy. Prerequisites: PSY 5105, PSY 5502.

PSY 5521 ASSESSMENT OF INTELLIGENCE (3 credits). Familiarizes the student with the major intellectual assessment instruments currently in use, with emphasis on the administration, scoring and interpretation of the Wechsler Scales. Special attention given to historical, cross-cultural and ethnic minority issues and controversies involved in the assessment of intelligence. Corequisites: PSY 5522.

PSY 5527 OBJECTIVE PERSONALITY ASSESSMENT (3 credits). Introduces current major self-report personality tests with emphasis on administering, scoring and interpreting the MMPI-2/MMPI-A and familiarity with MCMI-III, NEO-PI-R, PAI, 16PF and various checklists. Includes test development issues, ethical standards, test feedback and report-writing skills. Prerequisites: PSY 5501, PSY 5521.

PSY 5528 PROJECTIVE PERSONALITY ASSESSMENT (3 credits). Introduces semistructured and projective techniques with emphasis on administering, coding and interpreting the Rorschach (Exner System) and exposure to the TAT, sentence completion methods and projective drawing techniques. Includes exposure to dynamic/content analysis and integration of multiple sources of test data. Prerequisites: PSY 5527. Corequisites: PSY 5524.

PSY 5529 ASSESSMENT OF CHILDHOOD DEVELOPMENTAL DISORDERS (2 credits). Introduces the developmental and behavioral assessment practices for use with young children who present autism spectrum disorders, attention deficit disorder, other disruptive behavior problems, and developmental delays across multiple domains. Prerequisites: PSY 5521.

PSY 5540 PARENT-CHILD INTERACTION THERAPY (2 credits). Provides an introductory overview to both phases of the cognitive-behavioral treatment modality, parent-child interaction therapy (PCI), which covers an assortment of childhood behavior disorders. Includes both child-directed interaction and parent-directed interaction.

PSY 5541 CLINICAL SKILLS AND TECHNIQUES 1 (3 credits). Provides theory and experience in basic attending, listening, responding, personalizing and initiating skills. Students learn interviewing strategies, risk assessment, crisis intervention and integration of observational data with case conceptualization and treatment planning. Two credits of didactic and one of experiential laboratory.

PSY 5542 CLINICAL SKILLS AND TECHNIQUES 2 (3 credits). Provides advanced training in psychotherapeutic techniques and case conceptualization skills necessary for effective psychotherapeutic treatment planning and interventions. Two credits of didactic and one of experiential laboratory. Prerequisites: PSY 5541.

PSY 5543 CLINICAL HYPNOSIS (3 credits). A journeyman’s guide to the various applications of hypnosis in psychotherapy. Focuses on tests for suggestibility, techniques for trance induction, age regression and hypnotic procedures with a variety of clinical problems to include anxiety disorders, habit disorders, sexual dysfunction and psychosomatic disorders. Prerequisites: PSY 5501.

PSY 5544 DYNAMICS OF GROUP PSYCHOTHERAPY (3 credits). Studies group psychotherapy from the perspective of research on group dynamics. Considers the history and major types of group therapy, and provides an experiential component. Prerequisites: PSY 5501.

PSY 5553 PSYCHOTHERAPY MODELS: COGNITIVE BEHAVIORAL (3 credits). Includes theory and conceptual foundations of cognitive behavioral approaches, and case conceptualization and treatment from a cognitive-behavioral perspective. A lab component incorporates discussion and modeling of techniques, emphasizing the practical application of cognitive-behavioral intervention procedures. Prerequisites: PSY 5542.

PSY 5554 PSYCHOTHERAPY MODELS: PSYCHODYNAMIC (3 credits). Includes theory and conceptual foundations of psychodynamic approaches, and case conceptualization and treatment planning from a psychodynamic perspective. A lab component incorporates discussion and modeling of techniques, emphasizing the practical application of psychodynamic intervention procedures. Prerequisites: PSY 5542.

PSY 5555 PSYCHOTHERAPY MODELS: HUMANISTIC/EXISTENTIAL (3 credits). Includes theory and conceptual foundations of humanistic/existential approaches, and conceptualization and treatment planning from a humanistic/existential perspective. A lab component incorporates discussion and modeling of techniques, emphasizing the practical application of humanistic/existential intervention procedures. Prerequisites: PSY 5542.

PSY 5556 PSYCHOTHERAPY MODELS: FAMILY APPROACHES (3 credits). Includes theory and conceptual foundations of family treatment approaches, and case conceptualization and treatment planning from a family perspective. A lab component incorporates discussion and modeling of techniques, emphasizing the practical application of family intervention procedures. Prerequisites: PSY 5542.

PSY 5565 CHILD DISORDERS AND PSYCHOTHERAPY (3 credits). Studies the nature, etiology, characteristics, assessment and treatment of emotional, social and intellectual problems of children.

PSY 5570 MULTICULTURAL PSYCHOTHERAPY (3 credits). Provides an applied clinical overview of the major theoretical models of multicultural psychotherapy. Develops skills in using a multicultural orientation to guide the diagnosis, assessment and treatment of psychological disorders. Prerequisites: PSY 5120.

PSY 5591 SEMINAR IN PROFESSIONAL STANDARDS AND ETHICAL PRINCIPLES IN PSYCHOLOGY 1 (1 credit). Discusses professional ethics and standards in psychology. Required for all first-year clinical students.

PSY 5592 SEMINAR IN PROFESSIONAL STANDARDS AND ETHICAL PRINCIPLES IN PSYCHOLOGY 2 (1 credit). Discussion and implementation of professional ethics and standards in psychology and one’s own professional development. (Required for all second-year clinical students.) Prerequisites: PSY 5591.

PSY 5593 SEMINAR IN PROFESSIONAL STANDARDS AND ETHICAL PRINCIPLES IN PSYCHOLOGY 3 (1 credit). Discusses professional ethics and standards in psychology. Required for all third-year clinical students. Prerequisites: PSY 5592.
Course Descriptions 273

PSY 5595 PRACTICUM (1-6 credits). Supervised clinical work in an approved on- or off-campus setting. Placement at sites is determined by the Office of Clinical Training. Experiences will vary among sites to include assessment, intervention, cumulative and supervisory experiences. (Requirement: Clinical director approval and prerequisite course.) Prerequisites: PSY 5002, PSY 5502, PSY 5527, PSY 5542.

PSY 5596 SUPERVISED CLINICAL EXPERIENCE (1 credit). Experience in clinical settings, providing supervised psychological services to specialized populations. Seen as a pre-practicum experience, therefore does not fulfill supervised practical experience requirements of the program.

PSY 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

PSY 5999 THESIS (3-6 credits). Includes the preparation and submission of a research thesis, the quality of which is judged acceptable by the School of Psychology and Graduate School. Prerequisites: PSY 5102.

PSY 6102 FORENSIC PSYCHOLOGY (2 credits). The interaction of psychology and the law; emphasis on the psychologist as an expert witness and as consultant to attorneys and the court; and an evaluation of the rights of psychiatric patients under the law.

PSY 6103 INTRODUCTION TO FORENSIC PSYCHOLOGY (3 credits). Application of the science and practice of psychology to questions and issues relating to law and the legal system. The role of psychology in the legal system, evaluation and assessment, expert testimony, consultation and training, mediation and conflict resolution, and research.

PSY 6104 FUNDAMENTALS OF FORENSIC PSYCHOLOGY (2 credits). Introduces the interaction of psychology and the legal system. Applies the methods, theories and concepts of psychology to the legal system and the law. Includes the courts, correctional and forensic mental health facilities, and judicial and legislative agencies.

PSY 6105 CLINICAL FORENSIC ASSESSMENT (3 credits). Introduces the assessment tools necessary to respond to the needs of the law in criminal responsibility, psychopathy, psychopathology, competency to stand trial and assist counsel, substance abuse, future dangerousness, cognitive abilities and mitigating factors. Also examines the ethical requirements of the psychologist as an expert witness. (Requirement: Prerequisite course or instructor approval.) Prerequisites: PSY 6104.

PSY 6198 SUPERVISED RESEARCH (1-3 credits). Directed research under the supervision of a member of the psychology faculty in a selected area of psychology. May be repeated for a maximum of nine credits.

PSY 6199 INDEPENDENT RESEARCH IN I/O PSYCHOLOGY (5 credits). Facilitates the graduate student research experience through guided interaction with a member of the faculty. Includes supervision and instruction for doctoral students in the formulation of research questions, data collection, analysis and preparation of manuscript for publication. May be repeated for a total of six credits.

PSY 6402 CHAOS THEORY IN ORGANIZATIONS (3 credits). Covers the application of nonlinear dynamics to work and organizations including recent advances in mathematics and experimental design, and integrates those topics into models of organizational change. Special emphasis on the role of nonlinear dynamics in creativity and innovation.

PSY 6405 MULTIVARIATE STATISTICS (3 credits). Encourages students to use rigorous methodology in the study of organizational issues. Teaches multivariate statistical methods through the use of multiple computer exercises, keeping mathematical details to a minimum. Extensive coverage of both exploratory and confirmatory factor analysis.

PSY 6408 CULTURAL SEMINAR IN I/O PSYCHOLOGY (3 credits). Discusses cultural and multicultural issues in industrial/organizational psychology in a research seminar format. May be repeated with instructor's permission.

PSY 6409 CULTURAL RESEARCH APPLICATIONS IN I/O PSYCHOLOGY (3 credits). Supervised research in cultural applications to industrial/organizational psychology. Topics chosen by the student and supervisor. May be repeated with instructor's permission.

PSY 6420 ATTITUDES AND VALUES IN I/O PSYCHOLOGY (3 credits). Discusses the essential role of employee attitudes and values such as job satisfaction and organizational commitment on organizational performance, absenteeism and turnover. Emphasizes construct validation and survey methodology.

PSY 6492 ADVANCED RESEARCH SEMINAR IN I/O PSYCHOLOGY (1 credit). Focuses on current research methods and their application by visiting faculty in various areas of industrial/organizational psychology, highlighting theoretical and practical issues in contemporary research design and analytical techniques.

PSY 6521 PSYCHODIAGNOSTICS (3 credits). Teaches students how to integrate historical, interview, behavioral observations and test data into a clear, accurate and effective psychological report. Weekly test batteries help the student maximally use all available data to address referred questions and cogently communicate results in written format. Prerequisites: PSY 5502, PSY 5521, PSY 5527.

PSY 6522 NEUROPSYCHOLOGY AND NEUROPSYCHOLOGICAL ASSESSMENT (3 credits). Examines the neuroanatomical correlates of psychological functioning, including assessment and treatment techniques for neuropsychological disorders. Prerequisites: PSY 5105.

PSY 6527 FUNDAMENTALS OF CLINICAL NEUROPSYCHOLOGY (3 credits). Introduces the guiding principles of brain-behavior interactions derived from the basic disciplines of psychology, neuroanatomy and neuropathology. Provides the scientific basis for neuropsychological and cognitive assessment. Prerequisites: PSY 5105.

PSY 6546 POST-TRAUMATIC STRESS DISORDER (3 credits). Surveys clinical issues in the assessment and treatment of PTSD with a specific focus on the combat veteran. Prerequisites: PSY 5502, PSY 5527.

PSY 6550 MARITAL AND SEX THERAPY (3 credits). Examines the major theoretical approaches to couples' therapy. Provides a survey of human sexuality and the determinants of sexual dysfunction, and assessment and treatment modalities. Includes opportunities for role-play with clinical vignettes. (Requirement: Approval by clinical training director and advanced practicum standing.) Prerequisites: PSY 5556, PSY 5595.

PSY 6560 SUPERVISION IN CLINICAL TRAINING (2 credits). Considers various processes that influence the development of a psychotherapist. Also considers implications of research on psychotherapy and clinical outcome, the process of supervision, predictable stages as a therapist, options of techniques in supervision and career-long issues.

PSY 6561 CONSULTATION (2 credits). Examines the profession and practice of consultation. Models and applications include education and training, and clinical, mental health, behavioral, organizational and program approaches. Reviews common processes, principles and practices of the consulting psychologist.

PSY 6562 ADMINISTRATION OF MENTAL HEALTH SERVICES (2 credits). Introduces the clinician in training to the major concepts, issues and skills necessary for success in the management and administration of behavioral health services.

PSY 6570 CLINICAL APPLICATIONS IN BEHAVIORAL HEALTHCARE (3 credits). Focuses on the application of the integrated behavioral healthcare consultative model and intervention in management and treatment in healthcare. Emphasizes the role of behavioral interventions. Includes training in required assessment and consultation skills. Also emphasizes knowledge and skills needed for behavioral healthcare practice. Prerequisites: PSY 5542.

PSY 6584 BEHAVIORAL MEDICINE CASE CONFERENCE (1-3 credits). Surveys behavioral medicine and health systems, referrals, plans and implementation processes. Uses a group collaborative and supervisory approach, supplemented by clinical resources and consideration of expanded roles for psychologists in health and medical psychology. (Requirement: Instructor approval and prerequisite course.) Prerequisites: PSY 5595, PSY 5108 or PSY 6515 or PSY 6522.

PSY 6585 SUPERVISION AND CONSULTATION (3-6 credits). Theory and practice of skills and research in supervision and consultation. Addresses the stages of therapist development, techniques, and legal and career issues. Reviews processes, principles and practices of consulting. Includes education and training, mental health, behavioral, organizational and program approaches.

PSY 6590 CLINICAL INTERNSHIP PREPARATION LAB (0 credits). Prepares the student for the doctoral internship in clinical psychology. Includes application materials, site visits, notification, and APPIC and SOP internship policies and procedures. (Requirement: Approval by the clinical training director.)

PSY 6595 INTERNSHIP (9 credits). Involves 2,000 clock hours of supervised psychological activities in an APA-approved internship setting. (Requirement: Completion of all academic and practicum course work requirements, successful completion of comprehensive examinations, and clinical training director approval.)

PSY 6898 FINAL SEMESTER DOCTORAL RESEARCH PROJECT (0-2 credits). Variable registration for design project completion after satisfactory of minimum registration requirements. (Requirement: Approval by Office of Graduate Programs.)

PSY 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfactory of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)
PSY 6998 DOCTORAL RESEARCH PROJECT (3-6 credits). Includes the preparation and submission of a research project judged to be acceptable in scope and quality by the School of Psychology and the Graduate School. Prerequisites: PSY 5102.

PSY 6999 DISSERTATION (3-12 credits). Preparation of doctoral dissertation. (Requirement: Admission to doctoral candidacy and department head approval.)

SOCIOLOGY

SOC 1101 HUMAN BEHAVIOR PERSPECTIVE (3 credits). Offers an interdisciplinary viewpoint of the many ways in which human beings function as individuals, members of larger groups and members of particular cultures. Explores the disciplines of sociology, psychology and criminology in seeking to understand and explore human behavior. (Requirement: Must be enrolled in University Alliance.) (SS)

SOC 1102 GLOBAL PERSPECTIVE (3 credits). Surveys various global issues arising since World War II. Combines history, political science and economics. Emphasizes the interaction of the superpowers during the Cold War, the post-colonial emergence of the Third World, the ascendency of regional and international economic and political institutions and thereshaping of contemporary Europe. (Requirement: Must be enrolled in University Alliance.) (SS)

SOC 1551 INTRODUCTION TO AMERICAN CRIMINAL JUSTICE (3 credits). The philosophy and history of the American criminal justice system. Explores interrelationships among system components to include police, courts, institutional corrections, community-based corrections and the juvenile justice system. Contemporary critical issues such as discretion in the administration of criminal justice; race, class, and gender in the system; research and search and seizure. (SS)

SOC 1552 CRIME AND SOCIETY (3 credits). Broadly overviews the nature, extent and impacts of crime on society. Introduces various sociological and criminological theories in examining crime, victimology and delinquency. Discusses and reviews specific crimes. (SS)

SOC 2541 JUVENILE DELINQUENCY (3 credits). Explores the prevalence and patterns of juvenile delinquency, emphasizing causal factors, control and prevention. Examines the roles of family, peers, school, community, gender and other social regulators of delinquency. Introduces the juvenile justice system. (SS) Prerequisites: PST 1411, SOC 1551.

SOC 2551 SOCIAL PROBLEMS (3 credits). Introduces the contemporary social issues such as poverty, unemployment, energy, pollution, sexual deviance, drugs and crime. Includes causes, interactions, policy and possible solutions. (Requirement: Must be enrolled in University Alliance.) (SS)

SPACE SYSTEMS

SPC 5001 INTRODUCTION TO SPACE SYSTEMS (3 credits). Includes systems engineering, space flight history, space environment, astrodynamics, rocket propulsion, launch vehicle selection, space telecommunications, remote sensing, spacecraft configuration, structures, materials, power and thermal systems, launch and space mission operations, spacecraft navigation, guidance, control and military space applications.

SPC 5002 INTRODUCTION TO SPACE ENVIRONMENT (3 credits). Introduces properties of the space environment, particularly those important to space system design and operations. Includes microgravity, high vacuum, excited molecular species, space debris, the heliosphere, solar and cosmic radiation, solar-planetary interactions, planetary magnetospheres, trapped radiation and planetary ionospheres and thermal plasmas.

SPC 5004 SPACE PROPULSION SYSTEMS (3 credits). Includes principles of rocket propulsion, liquid and solid chemical rockets, thrusters and thrust vectoring, electric and electromagnetic propulsion, solar sailing, space tethers and nuclear radio-isotope, fission reactor and fusion propulsion systems. Prerequisites: SPC 5001.

SPC 5005 SPACE POWER SYSTEMS (3 credits). Includes energy conversion and storage in space; chemical, mechanical and thermal energy storage; fuel cell types; photovoltaic cells, thermonic, thermoelectric and radiotiope thermoelectric generators; power generators; space nuclear technology, and space station energy system design. Prerequisites: SPC 5001.

SPC 5006 SPACE COMMUNICATIONS AND DATA SYSTEMS (3 credits). Reliable spacecraft telecommunication systems via radio frequency links with small performance margins. Digital modulation techniques, noise temperature, channel capacity and data/waveform coding techniques for BER improvement. Methods of data acquisition, storage and processing. Prerequisites: SPC 5001.

SPC 5010 SPACECRAFT GUIDANCE, NAVIGATION AND CONTROL (3 credits). The principles and practice of electronic, inertial and stellar navigation, onboard and ground-controlled; attitude control methods and systems; and orbital guidance technology and systems. Prerequisites: SPC 5001.

SPC 5011 HUMAN SPACE SYSTEMS (3 credits). The role of astronauts in space. Astronaut and cosmonaut achievements in space research, extravehicular activity, long-duration space flight and lunar exploration. The space shuttle, space stations, future space habitats, lunar bases and expansion into heliocentric space. Prerequisites: SPC 5001.

SPC 5012 SPACECRAFT ENVIRONMENT (3 credits). The pre- and post-launch interactions between a space vehicle and its environment, including atmospheric density and composition; gravity and free-fall; mechanical, thermal electro-magnetic field and energetic particle stresses; space debris impacts; and conducting space tether applications.

SPC 5013 SPACE SYSTEMS ASTRODYNAMICS (3 credits). Includes two- and three-body orbital problems, sun-synchronous mapping orbits, geostationary orbit and perturbations, out-of-plane orbital transfers, orbital rendezvous, ballistic missile problems and patched conic and gravity-assist interplanetary trajectories.

SPC 5014 SPACECRAFT DYNAMICS AND CONTROL (3 credits). Studies the dynamics of spacecraft attitude motion and pointing controls. Includes coordinate conversions, spacecraft principle axes, attitude control thrusters, spin and momentum exchange devices. Also includes spacecraft control transfer functions, disturbance torques and stability.

SPC 5017 AEROSPACE REMOTE SENSING SYSTEMS (3 credits). Principles and applications of remote sensing from the atmosphere and space; sensors for various wavelengths, imaging systems, data handling, image reconstruction and processing; contemporary remote sensing applications; geographic information systems and nonterrestrial atmospheres. Prerequisites: SPC 5001.

SPC 5018 LAUNCH AND SPACE MISSION OPERATIONS (3 credits). Includes typical mission operations, from prelaunch through launch, tracking, orbit modification, spacecraft deployment and checkout. Range tracking, telemetry, safety instrumentation, transition to on-orbit communications, and tracking and data relay satellite system. Prerequisites: SPC 5001.

SPC 5065 SPACE SYSTEMS FOR REMOTE OPERATIONS (3 credits). Principles of robotics, artificial intelligence and remotely controlled exploration, operation, observation and manipulation. Design of equipment for processing, manufacturing, maintaining and repairing equipment in space, and in lunar and planetary environments. Prerequisites: SPC 5001.

SPC 5066 SPACEFLIGHT HUMAN PHYSIOLOGY (3 credits). Explores the physiologic capabilities and limitations of astronauts. Reviews data for each phase of space flight from the U.S. and Russian space programs. Previews human participation in long-duration space station, lunar and planetary missions. (Requirement: Graduate standing.)

SPC 5080 SPACE MISSIONS (3 credits). The competitive design, by student teams, of a space mission specified by the instructor. Candidate mission subjects include astronomy, communications, human space missions, planetary and interplanetary robotic exploration and remote sensing. (Requirement: Satisfactory completion of six required space systems courses with a GPA of at least 3.0.)

SPC 5090 SPECIAL TOPICS IN SPACE SYSTEMS (3 credits). Individual study of specific problems in space systems. (Requirement: Department head approval.)

SPC 5091 SPECIAL TOPICS IN SPACE SYSTEMS (1 credit). Individual study of specific problems in space systems. (Requirement: Department head approval.)

SPC 5092 SPECIAL TOPICS IN SPACE SYSTEMS (2 credits). Individual study of specific problems in space systems. (Requirement: Department head approval.)

SPC 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

SPC 5999 THESIS (3-6 credits). Individual work under the direction of a member of the graduate faculty on a selected topic in the field of space systems. (Requirement: Completion of 18 semester hours in space systems and department head approval.)

SPACE SCIENCES

SPS 1010 INTRODUCTION TO ASTRONOMY (3 credits). A descriptive survey of astronomical topics suitable for both majors and nonmajors in the space sciences. Includes properties of light, astronomical instrumentation, stellar structure and evolution, the interstellar medium, galactic formation and evolution, large-scale structure and cosmology.

SPS 1020 INTRODUCTION TO SPACE SCIENCES (3 credits). Studies the solar system and its member planets, moons, rings and small bodies, their formation, dynamics, chemistry, atmospheres, surface features, interiors and magnetic fields. Presents results of recent space probes in a comparative study of the solar system's members.
SPS 2010 OBSERVATIONAL ASTRONOMY (3 credits). Combines lecture and observational labs to provide an introduction to the techniques of observational astronomy. Includes celestial coordinate systems, time, apparent stellar motions, constellations, the use of star charts and catalog, and visual CCD photometry. Prerequisites: MTH 1001, SPS 1010.

SPS 3010 GEOPHYSICS (3 credits). Introduces the structure, internal constitution, deformation and dynamics of the solid Earth as revealed by surface geophysical manifestations (gravity, magnetic, electrical, seismic). Includes heat flow, electromagnets, tides, the gravitational field and magnetic field. Prerequisites: MTH 2001, PHY 2002.

SPS 3020 METHODS AND INSTRUMENTATION (3 credits). Detailed introduction to the techniques and instrumentation used in modern observational astronomy and space science. Includes astronomical sources, observational limits, telescopes, atmospheric effects, spectrographs, single-channel detectors and advanced solid-state detectors of all types. Prerequisites: PHY 2002.

SPS 3030 ORBITAL MECHANICS (3 credits). Provides the foundations of basic gravitation and orbital theory. Includes coordinate and timekeeping systems, the two-body problem, particle dynamics and motion under inverse square forces, particularly as applied to spacecraft orbit determinations, trajectories, time of flight and maneuvers. Prerequisites: PHY 3011.

SPS 3901 RESEARCH EXPERIENCE IN SPACE SCIENCES (1 credit). Individual research directed by a faculty member. May not be used in place of any named courses in the major program. Requires the preparation and presentation of a report on the research. May be repeated for a maximum of four credits. (Requirements: GPA of 3.0 or higher, sophomore or higher standing, and instructor and department head approval.)

SPS 4010 ASTROPHYSICS 1: INTRODUCTION TO STELLAR STRUCTURE AND EVOLUTION (3 credits). Introduces the physics of the sun and stars. Includes properties of E&M radiation, stellar distances and magnitudes, radiative transfer, the sun, the ISM and star formation, stellar evolution, stellar endpoints and variable stars. Prerequisites: MTH 2201, PHY 3060.

SPS 4020 ASTROPHYSICS 2: GALACTIC STRUCTURE AND COSMOLOGY (3 credits). Includes galactic coordinates, galactic rotation curve, N-body concepts and the virial theorem, Galactic formation and evolution, external galaxies, galactic system evolution, Hubble's law and the distance scale, large-scale structure, cosmology and the particle physics connection. Prerequisites: SPS 4010.

SPS 4025 INTRODUCTION TO SPACE PLASMA PHYSICS (3 credits). Introduces the physics of ionized gases beginning with the subjects of single-particle motion, collection of particles, fluid description of plasmas and magnetohydrodynamics. Emphasizes the role of plasmas in solar-terrestrial space physics. Includes heliospheric, magnetospheric and ionospheric topics. Prerequisites: PHY 3440.

SPS 4030 PHYSICS OF THE ATMOSPHERE (3 credits). Studies the behavior of Earth's lower atmosphere, including an introduction to comparative planetology, atmospheric evolution, thermodynamics, dynamics, waves and turbulence, clouds, hurricanes, global circulation and global change. Prerequisites: MTH 2201, PHY 3060.

SPS 4035 COMPARATIVE PLANETOLOGY (3 credits). Comprehensively surveys observations from both space-based and Earth-based experimentation, incorporated with the major planetary bodies, asteroids, comets and other small orbitals. Discusses both planetary interiors surface features and atmospheres. Prerequisites: PHY 3060, SPS 1020.

SPS 4100 SENIOR LAB (2 credits). Students conduct experiments in optics, atomic structure, nuclear and solid state physics that are basic to observations in space sciences. (Requirements: Senior standing in space sciences.)

SPS 4200 SENIOR SEMINAR 1 (1 credit). Includes reports and discussions on selected topics in contemporary, experimental and theoretical physics and space sciences. (Requirements: Student must be within three semesters of graduation.) (Q)

SPS 4201 SPECIAL TOPICS IN SPACE SCIENCES (3 credits). Studies specific problems of space sciences. (Requirements: Department head approval.)

SPS 4210 SENIOR SEMINAR 2 (1 credit). Includes reports and discussions on selected topics in contemporary, experimental and theoretical physics and space sciences. (Requirements: Student must be within three semesters of graduation.) (Q) Prerequisites: SPS 4200.

SPS 4300 INDEPENDENT STUDIES (3 credits). Individual study of specific problems in space sciences. (Requirements: Department head approval.)

SPS 4901 UNDERGRADUATE RESEARCH (3 credits). Individual research directed by a faculty member. (Requirements: Department head approval.)

SPS 4902 UNDERGRADUATE RESEARCH (3 credits). Individual research directed by a faculty member. (Requirements: Department head approval.)

SPS 5010 ASTROPHYSICS 1: STELLAR STRUCTURE AND EVOLUTION (3 credits). Introduces basic interior structural equations, energy generation processes, opacity, energy transport, radiation transport in stellar atmospheres, star formation, late stages of stellar evolution, stellar binaries and clusters. Special emphasis on analytic and numerical models relevant to the sun. Prerequisites: PHY 3060, SPS 1010.

SPS 5011 ASTROPHYSICS 2: GALACTIC STRUCTURE AND COSMOLOGY (3 credits). Includes formation and evolution of the Galaxy, including stellar populations and kinematics, spiral density theory; extragalactic astronomy, atomic and nuclear nuclei, Hubble's law, large-scale structure, and cosmology, including inflationary cosmology and the particle physics connection. Prerequisites: SPS 5010.

SPS 5020 SPACE PHYSICS 1: THE LOW-ENERGY UNIVERSE (3 credits). Introduces low-energy space plasma physics including the statistical behavior of plasmas, kinetic theory and magnetohydrodynamics. Emphasizes solar system space plasma physics and the sun-Earth connection including magnetospheric physics. Prerequisites: PHY 3440.

SPS 5021 SPACE PHYSICS 2: THE HIGH-ENERGY UNIVERSE (3 credits). The theoretical background and methods for observing gamma rays, x-rays, high energy electrons and heavy particles, cosmic rays, neutrons and gravitational waves from both spacecraft and Earth. (Requirements: Prerequisite course or instructor approval.) Prerequisites: SPS 4025.

SPS 5030 PLANETARY SCIENCE 1: INTERIORS (3 credits). Mechanical and thermal processes governing the interior structure and surfaces of the major and minor planetary bodies of the solar system. Includes the planetary crust, mantle, core, core-mantle interface, seismicity, density and elastic constants. (Requirements: Prerequisite course or instructor approval.) Prerequisites: SPS 4010.

SPS 5031 PLANETARY SCIENCE 2: ATMOSPHERES (3 credits). Principles governing the evolution, composition and retention of planetary atmospheres and the interplanetary environment. Includes the neutral atmosphere, photochemical processes, diffusion dynamics and planetary ionospheres and magnetospheres. Prerequisites: SPS 4030.

SPS 5088 SPECIAL TOPICS IN SPACE SCIENCES (3 credits). Investigates specific problems in the space sciences. (Requirements: Department head approval.)

SPS 5090 SPECIAL TOPICS IN OBSERVATIONAL ASTRONOMY 1 (3 credits). Participation in advanced observing programs at the university's observatories. (Requirements: Department head approval.)

SPS 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

SPS 5999 THESIS (3-6 credits). Individual work under the direction of a member or members of the graduate faculty on a selected topic in space sciences. (Requirements: Department head approval.)

SPS 6001 INDIVIDUAL STUDIES (1-3 credits). Preparation for doctoral qualifying examination by individual studies under faculty supervision. (Requirements: Department head approval.)

SPS 6090 RESEARCH (1-6 credits). Research leading to the doctoral dissertation. (Requirements: Department head approval.)

SPS 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

SPS 6999 DISSERTATION (3-12 credits). Preparation of doctoral dissertation. (Requirements: Admission to doctoral candidacy and department head approval.)

SOFTWARE ENGINEERING

SWE 5001 SOFTWARE ENGINEERING 1 (3 credits). The application of engineering rigor to all phases of the software development life cycle; requirements elicitation and analysis, software architecture, software design and construction, software integration and test, and software maintenance. Students work individually to develop a software system from an initial problem statement through release of the completed product.

SWE 5002 SOFTWARE ENGINEERING 2 (3 credits). The application of engineering rigor and team coordination to develop a software product. Provided with an initial problem statement, teams create and document their own disciplined procedures for each phase of the software development life cycle, then develop the software according to their own documented processes and finally provide in-depth critiques of the processes they followed. Prerequisites: SWE 5001.

SWE 5110 REQUIREMENTS ENGINEERING (3 credits). Provides an in-depth study of software requirements, engineering tools and techniques. Includes gathering user requirements, formal specification of system behavior, system interfaces, end-user and system documentation and validation techniques. Emphasizes the end-user aspect of gathering and formalizing or user requirements. Prerequisites: SWE 5001.

SWE 5320 WINDOWS SYSTEMS PROGRAMMING (3 credits). Focuses on programming for Windows 32- and 64-bit operating systems. Windows handling of processes, threads and memory management with emphasis on writing programs to optimally use these resources. Use of and programming for UNICODE, dynamic link libraries and the WIN32 API. Students write substantial programs in Visual C++.
SWE 5411 SOFTWARE TESTING 1 (3 credits). Explores functional (black box) methods for testing software systems, reporting problems effectively and planning testing projects. Students apply what they have learned throughout the course to a sample application that is commercially available or under development. The choice of sample application changes from term to term. Prerequisites: CSE 2410 or SWE 5001, CSE 1400, CSE 2400.

SWE 5415 SOFTWARE TESTING 2 (3 credits). Explores structural (glass box) methods for testing software. Testing of variables in simultaneous and sequential combinations, application programmer interfaces, protocols, design by contract, coverage analysis, testability, diagnostics, asserts and other methods to expose errors, regression test frameworks, test-first programming. Prerequisites: CSE 3411 or SWE 5411.

SWE 5430 SOFTWARE TESTING TOOLS (3 credits). This project-oriented course requires students to perform a survey of existing testing tools and to test a featured software product. Students are responsible for assessing functionality of testing tools and working with tool vendors to acquire and deploy a number of tools to test a real software application.

SWE 5440 INTRODUCTION TO SOFTWARE ARCHITECTURE (3 credits). Presents the role of software architecture in the software engineering life cycle. Covers techniques for design to meet functional requirements; analysis with respect to desired attributes such as performance, reliability and maintainability; and improvement to better satisfy desired attributes while still meeting functional requirements. Prerequisites: SWE 5001.

SWE 5510 SOFTWARE MAINTENANCE (3 credits). Describes abstraction techniques to extract specifications and design from existing code. Discusses the use of these techniques in debugging, re-engineering and software enhancement. Prerequisites: SWE 5001.

SWE 5621 SOFTWARE METRICS AND MODELING (3 credits). Examines common software metrics, axiomatic foundations of measurement, validity of measurements and measurement dysfunction, and some statistical and modeling approaches to help students make their software measurements meaningful. Prerequisites: CSE 2410 or SWE 5001, CSE 2400.

SWE 5660 SECURE SOFTWARE DEVELOPMENT (3 credits). Examines the importance of building security into the design, implementation and testing phases of software development. Covers coding techniques that avoid known vulnerabilities and test strategies that can uncover previously unknown weaknesses. Includes a discussion of security policies and design principles. Prerequisites: SWE 5460.

SWE 5899 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

SWE 5900 SPECIAL TOPICS IN SOFTWARE ENGINEERING (1-3 credits). Selected topics of current interest in software engineering. Material varies according to faculty and student interest. May be repeated for credit. (Requirement: Instructor approval.)

SWE 5999 THESIS (3-6 credits). Individual work under the direct guidance of a faculty member, culminating in the formal defense of a written thesis. (Requirement: Instructor approval.)

SYSTEMS ENGINEERING

SYS 4100 QUALITY ENGINEERING (3 credits). Provides principles and techniques for establishing quality goals, identification of customer needs and requirements, measurement of quality objectives and product/process engineering to improve system performance. (Requirements: Junior standing and instructor approval.) Prerequisites: MTH 2201.

SYS 4200 PROJECT ENGINEERING (3 credits). Provides principles of project management to design and develop products and services within budget, on time and to specification. Includes work planning, organization design, requirements analysis, project control and PERT/CPM. (Requirements: Junior standing and instructor approval.) Prerequisites: MTH 2201.

SYS 4310 SYSTEMS ENGINEERING PRINCIPLES (3 credits). Introduces the principles in systems engineering (SE) that deal with system life cycle phases. Emphasizes requirements and design methodologies. Includes SE definition; life cycle methodologies, tools and techniques; evaluation of system and technology alternatives; reliability and maintainability; trade-off models; and management tools and techniques. (Requirements: Junior standing and instructor approval.) Prerequisites: MTH 2201.

SYS 4460 SYSTEMS REQUIREMENTS ANALYSIS (3 credits). Provides an in-depth study of systems requirements processes and tools. Includes concepts such as capturing stakeholder requirements, the importance of the concept of operations and the system development life-cycle process. (Requirements: Junior standing and instructor approval.) Prerequisites: MTH 2201.

SYS 5001 RESEARCH METHODS IN SYSTEMS ENGINEERING PREPARATION (1 credit). Preparation for SYS 5370. Overviews probability and statistics, including summary measures of a simple data representation and probability distributions. Discusses data analysis and interpretation including hypothesis formulation, sampling and statistical interference. Cannot be used to fulfill graduation requirements.

SYS 5002 SYSTEM LIFE CYCLE COST ESTIMATION PREPARATION (1 credit). Preparation for SYS 5385. Overviews current methodologies and tools for estimating the costs of all phases of the system life cycle, including both research and development. Includes fundamentals of cost estimation techniques and cost-benefit analysis. Cannot be used to fulfill graduation requirements.

SYS 5003 COMPUTER NETWORK ARCHITECTURE PREPARATION (1 credit). Preparation for ECE 5272. Overviews basic theory, design and analysis of computer communications in systems. Includes fundamentals of TCP/IP, Internet, the World Wide Web, ISO-OSI network architecture and LANs. Cannot be used to fulfill graduation requirements.

SYS 5004 MILITARY OPERATIONS RESEARCH PREPARATION (1 credit). Preparation for SYS 5375. Overviews optimization modeling techniques and operations research fundamentals. Includes a review of linear programming, nonlinear programming and goal programming. Cannot be used to fulfill graduation requirements.

SYS 5005 SPECIAL TOPICS IN COMMAND, CONTROL, COMMUNICATIONS AND INTELLIGENCE PREPARATION (1 credit). Preparation for ECE 5272. Overviews broad CSI areas such as sensor data fusion, estimation, tracking, probability and statistical models and optimization. Cannot be used to fulfill graduation requirements.

SYS 5200 PROJECT ENGINEERING (3 credits). Principles of project management to design and develop products and services within budget, on time and to specification. Includes work planning, organization design, requirements analysis, project control and PERT/CRM. (Requirement: Instructor approval.)

SYS 5310 SYSTEMS ENGINEERING PRINCIPLES (3 credits). Introduces the fundamental principles in systems engineering (SE) that deal with system life cycle phases with emphasis on requirement and design methodologies. Key topics include SE definition; life cycle methodologies, tools and techniques; evaluation of system and technology alternatives; reliability and maintainability; trade-off models; and SE management tools and techniques.

SYS 5350 SYSTEMS MODELING AND ANALYSIS (3 credits). System simulation modeling and analysis tools and techniques, covering issues such as variability, covariance and correlation. Includes management of simulation and modeling projects, verification and validation techniques, variance reduction techniques, animation, continuous system simulation, and creativity and innovation through modeling.

SYS 5365 DECISIONS AND RISK ANALYSIS (3 credits). Analytical methods to solve decision problems that involve uncertainties, opposing objectives and limited or excessive information. Key topics include structuring decision, expected opportunity loss, expected value of imperfect information, Bayesian Analysis, utility curves, decision trees, risk analysis/mitigation tools and techniques, and risk profiles.

SYS 5370 RESEARCH METHODS IN SYSTEMS ENGINEERING (3 credits). Systematic measurement and analysis of data to improve decision accuracy. Key topics include scientific approach as in solving SE problems, hypothesis testing, data collection issues such as survey data, reliability, accuracy of measured data, data measurement tools and techniques, statistical process control, design of experiment methods, full and fractional designs, multiple regression analysis.

SYS 5375 MILITARY OPERATIONS RESEARCH (3 credits). Quantitative methods used in support of military decisions at strategic and tactical levels. Key topics include operations research concepts, quantitative evaluation of military alternatives, resource allocation models (linear and non-linear programming), assignment problems, transportation modeling (deployment, airdropping, mobility), inventory models and limited area/limited time operations.

SYS 5380 SYSTEMS ENGINEERING DESIGN PROJECT (3 credits). This team-oriented capstone course in the graduating semester enables the student to integrate learning from all MSSE courses in a real-life project setting. Day-to-day progress is monitored by a company supervisor with weekly status reports turned in to the supervisor and the instructor. Input from the company supervisor is a factor in the final grade.

SYS 5385 SYSTEM LIFE CYCLE COST ESTIMATION (3 credits). Includes tools and techniques used in estimating cost of all phases of a system. Covers total system cost including research and development, investment and operation. Also includes the system life cycle (SLC) cost estimation process, SLC cost estimation models including discounted cash-flow analysis, activity-based costing, and cost-benefit calculations. Teaches cost scenario sensitivity analysis and design-to-cost concepts.
SYS 5390 COLLABORATIVE SYSTEM ENGINEERING (3 credits). Covers the design, development and deployment of complex engineered systems. Addresses the design of all complex engineered systems and incorporates the knowledge and thoughts of each engineer as a person and not merely as a representative of a particular feature or subsystem. Emphasizes the particular setting for which the model is constructed.

SYS 5415 SYSTEMS ENGINEERING ENTREPRENEURSHIP (3 credits). Uses systems engineering principles and practices to teach engineers the entrepreneurship process and how to create high-tech start-ups. Integrates experience, guest lectures, networking and business plan preparation and presentation. (Requirement: Graduate standing in engineering, science or mathematics, or instructor approval.)

SYS 5420 SYSTEM ARCHITECTURE FUNDAMENTALS (3 credits). Presents a comprehensive, technical, systems-oriented approach to understanding contemporary issues in enterprise architecture (EA) systems. EA includes strategic planning, management and decision-making by presenting integrated and coordinated views of an enterprise. (Requirement: Instructor approval.)

SYS 5430 ENTERPRISE ARCHITECTURE INTEGRATION AND IMPLEMENTATION (3 credits). Looks at integration and implementation issues associated with enterprise architecture systems. Presents implementation methodologies and describes documentation frameworks. Exposes students to architecture components and artifacts. (Requirement: Instructor approval.)

SYS 5440 ENTERPRISE ARCHITECTURE PROJECT PLANNING, MANAGEMENT AND DOCUMENTATION (3 credits). Looks at project planning and management functions such as project organization, planning and control, requirements analysis and risk management. (Requirement: Instructor approval.)

SYS 5450 SERVICE-ORIENTED ARCHITECTURE CONCEPTS AND THEORY (3 credits). Looks at service-oriented architecture concepts and theory. Presents the enterprise architecture perspective of service-oriented architectures. Introduces primary software service implementation technologies and overviews standards and languages. (Requirement: Instructor approval.)

SYS 5460 SYSTEMS REQUIREMENTS ANALYSIS (3 credits). Provides an in-depth study of systems requirements processes and tools. Includes concepts such as capturing stakeholder requirements, the importance of the concept of operations and the system development life-cycle process. (Requirement: Instructor approval.)

SYS 5495 SPECIAL TOPICS IN SYSTEMS ENGINEERING (3 credits). Investigates special interest topics and novel applications or implementations of systems engineering principles under the guidance of graduate faculty. (Requirement: Instructor approval.)

SYS 5599 FINAL SEMESTER THESIS (0-2 credits). Variable registration for thesis completion after satisfaction of minimum registration requirements. (Requirements: Accepted petition to graduate and approval by Office of Graduate Programs.)

SYS 5999 THESIS RESEARCH IN SYSTEMS ENGINEERING (3-6 credits). Individual research under the direction of a member of the graduate faculty in a selected systems engineering topic. May be repeated for a maximum of six credits. (Requirement: Thesis adviser approval.)

SYS 6010 ADVANCED TOPICS IN DECISION AND RISK ANALYSIS (3 credits). Discusses advanced analytical methods for complicated decisions involving uncertainties, opposing objectives, and limited or excessive information. Also discusses advanced analytical methods for dealing with strategic decisions. Prerequisites: SYS 5365.

SYS 6020 ADVANCED TOPICS IN SYSTEMS MODELING AND ANALYSIS (3 credits). Builds on material covered in SYS 5350. Advances practical working knowledge of the systems analysis process, modeling and simulation technology. Includes advanced techniques related to decision and data analysis using discrete-event simulation. Prerequisites: SYS 5350.

SYS 6030 ADVANCED TOPICS IN PROCESS ENGINEERING (3 credits). Allows investigation of advanced topics, tools, principles and methodologies in process engineering. Also investigates advances in modeling standards, process metrics, system process modeling, business process modeling and workflow process modeling. Prerequisites: SYS 5370.

SYS 6040 SEMINAR IN SYSTEMS ENGINEERING (3 credits). Covers contemporary issues in systems engineering. Includes a wide range of advanced topics such as modern requirements analysis methods, process engineering, decision and risk analysis, engineering modeling and design, team dynamics and productivity, and system analysis and design. Prerequisites: SYS 5310, SYS 5385.

SYS 6899 FINAL SEMESTER DISSERTATION (0-2 credits). Variable registration for dissertation completion after satisfaction of minimum registration requirements. (Requirements: Accepted candidacy and approval by Office of Graduate Programs.)

SYS 6999 DISSERTATION (3-12 credits). Preparation of doctoral dissertation. (Requirement: Admission to doctoral candidacy and department head approval.)

BOARD OF TRUSTEES

RAYMOND A. ARMSTRONG, M.D.
Physician

RICHARD N. BANEY, M.D.
Medical Officer, Lindblad Expeditions

NATHAN M. BISK
Chairman and Chief Executive Officer, Bisk Education Inc.

HARRY E. BRANDON
President, Brandon Properties Inc.

JOSEPH CARUSO
President/Chief Executive Officer, OmniFirst Group

ANTHONY J. CATANESE, Ph.D., FAICP
President, Florida Institute of Technology

ANDREW M. CLARK, Ph.D.
President, Maritime Communication Services, Harris Corporation

CHARLES CLEMENTE
Chief Operating Officer (Ret.), America Online/RCC

DALE A. DETTMER, J.D.
Chairman, Florida Institute of Technology Board of Trustees

PHILLIP W. FARMER
Chairman, President and Chief Executive Officer (Ret.), Harris Corporation

JOSEPH M. FLAMMIO
Senior Vice President (Ret.), Wachovia Securities Inc.

STEVEN FREEMAN
Complex Manager for Sarasota/Tampa Bay, Morgan Stanley

RUTH E. FUNK
Director (Ret.), Interior Design Program, Russell Sage College

JOHN T. HARTLEY
Board of Directors, Harris Corporation

HENRY HEFELICH
Chief Technology Officer (Ret.), broadcast.com/Yahoo!

ALLEN S. HENRY, Ph.D.
Vice President and General Manager (Ret.), JDS Uniphase Broadband Products Inc.

BJÖRNAR K. HERMANSEN
President and Chief Executive Officer, The sHermansen Group Inc.

ERIK E. JOH
Secretary, Florida Institute of Technology Board of Trustees

MALCOLM R. KIRSCHENBAUM, J.D.
of Counsel for Gray Robinson, P.A.

HOWARD L. LANCE
Chairman, President and Chief Executive Officer, Harris Corporation

RICHARD P. MCNEIGHT
President, Federal Systems, LLC

WILLIAM C. POTTER, J.D.
Partner (Ret.), Holland and Knight – Potter, McClelland, Marks and Healy, P.A.

JAMES E. PRUITT
President, Pruitt McCaslin Inc.

KENNETH P. REVAY
Manager, Hypergolic Systems, United Space Alliance

MICHAEL SCAFATI
Senior Vice President, Wachovia Securities Inc.

EDWARD W. SCOTT JR.
Founder, BEA Systems and Center for Global Development

SCOTT J. SEYMOUR
Sector President (Ret.), Northrop Grumman Corporation

JOHN L. SLACK
Chairman of the Board, Ardak Corporation

F. ALAN SMITH
Executive Vice President (Ret.), General Motors Corporation

ELIZABETH J. (JONNIE) SWANN
Owner, Dun Huntin Grove

JAMES W. THOMAS
Vice Chairman, Florida Institute of Technology Board of Trustees
Principal, Coastal Dominion Capital, LLC

JEWGENI H. DSHALALOW, Dr.Sci.
Professor, Mathematical Sciences

MICHAEL GALLO, Ph.D.
Associate Professor, Science and Mathematics Education

BARRY G. GROSSMAN, Ph.D.
Professor, Electrical and Computer Engineering
GERALD A. MARIN, Ph.D.
Professor, Computer Sciences

JOSE MARTINEZ-DIAZ, Ph.D., BCBA-D
Associate Professor, Psychology

GEORGE A. MAUL, Ph.D.
Professor and Head, Marine and Environmental Systems

KUNAL MITRA, Ph.D.
Professor, Mechanical Engineering

JEAN-PAUL PINELLI, Ph.D., P.E.
Professor, Civil Engineering

THEODORE R. RICHARDSON III, Ed.D.
Professor and Senior Associate Dean, Accreditation, Extended Studies Division, Nathan M. Bisk College of Business

VIRENDER K. SHARMA, Ph.D.
Professor, Chemistry

MARY L. SOHN, Ph.D.
Professor, Chemistry and Chair, Graduate Council

JUDITH B. STROTHER, Ph.D.
Professor, Applied Linguistics

MANOLIS M. TOMADAKIS, Ph.D.
Associate Professor and Head (Interim), Chemical Engineering

Alexander R. Vamosi, Ph.D.
Associate Professor and Assistant Head, Humanities and Communication

MARIUS C. SILAGHI, Ph.D.
Assistant Professor, Computer Sciences

MARK R. ARCHAMBAULT, Ph.D.
Assistant Professor, Aerospace Engineering

GISELA S. BAHR, Ph.D.
Associate Professor, Psychology

LASZLO A. BAKSAY, Ph.D.
Professor, Physics and Space Sciences

J. CLAYTON BAUM, Ph.D.
Professor, Chemistry

DEBRA S. BLENIS, M.S.
Instructor and Director, Teacher Education, Science and Mathematics Education

LTC SCOTT P. CALDWELL, M.A.
Professor and Head, Military Science

KATHY A. TURNER, M.L.I.S.
Director of Instruction, Evans Library

JONATHAN E. WHITLOW, Ph.D.
Associate Professor, Chemical Engineering

JOHN G. WINDSOR JR., Ph.D.
Professor and Associate Head, Marine and Environmental System

UNDERGRADUATE CURRICULUM COMMITTEE

UGUR G. ABDULLA, Ph.D.
Associate Professor, Mathematical Sciences

MARK R. ARCHAMBAULT, Ph.D.
Assistant Professor, Aerospace Engineering

GISELA S. BAHR, Ph.D.
Associate Professor, Psychology

LASZLO A. BAKSAY, Ph.D.
Professor, Physics and Space Sciences

J. CLAYTON BAUM, Ph.D.
Professor, Chemistry

DEBRA S. BLENIS, M.S.
Instructor and Director, Teacher Education, Science and Mathematics Education

LTC SCOTT P. CALDWELL, M.A.
Professor and Head, Military Science

KATHY A. TURNER, M.L.I.S.
Director of Instruction, Evans Library

JONATHAN E. WHITLOW, Ph.D.
Associate Professor, Chemical Engineering

JOHN G. WINDSOR JR., Ph.D.
Professor and Associate Head, Marine and Environmental System

FACULTY/RESEARCH PROFESSIONALS

ABDULLA, U.G., Associate Professor, Mathematical Sciences. B.S., M.S., Azerbaijan State University, Azerbaijan; Ph.D., Academy of Sciences, Baku, U.S.S.R.; D.Sc., Baku State University, U.S.S.R.

ABERDEIN, A.J., Associate Professor, Logic and Philosophy. B.A., University of Durham; M.Litt., Ph.D., University of St. Andrews, U.K.

ABERNATHY, W.B., Adjunct Faculty, Psychology. B.A., Florida State University; M.A., George Peabody College; Ph.D., Ohio State University. (Private Practice Memphis, Tenn.)

AGARWAL, R.P., Professor, Mathematical Sciences. B.S., M.Sc., Agra University, India; Ph.D., Indian Institute of Technology–Madras, India.

AKHREMITCHEV, B.B., Associate Professor, Chemistry. Diploma, Moscow Institute of Physics and Technology; Ph.D., University of Pittsburgh.

ALFORD, R.L., Vice President, Student Affairs and Professor, Languages and Linguistics. B.A., M.A., Texas Tech University; Ph.D., Florida State University.

ALLEN, W.H., Associate Professor, Computer Sciences. B.S., M.S., Ph.D., University of Central Florida.

AMARAM, D.I., Adjunct Faculty, Fort Lee. B.A., Howard University; MBA, University of Missouri; Ph.D., Ohio State University.

AMORDE, C., Adjunct Faculty, Computer Sciences. M.S., Florida Institute of Technology.

ANAGNOSTOPOULOS, G.C., Associate Professor, Electrical and Computer Engineering. Dipl.Eng., University of Patras, Greece; M.S., Ph.D., University of Central Florida.

ANGELO, J.A., Adjunct Faculty, Environmental Science. B.S., Manhattan College; M.S., Ph.D., University of Arizona.

ARCHAMBAULT, M.R., Assistant Professor, Aerospace Engineering. B.S., M.S., Florida Institute of Technology; Ph.D., Stanford University.

ARONSON, B.B., Professor and Head, Biological Sciences. A.B., Dartmouth College; A.M., Ph.D., Harvard University.

ARRASMITH, W.W., Professor, Systems Engineering. B.S., Virginia Polytechnic Institute and State University; M.S., University of New Mexico; Ph.D., Air Force Institute of Technology.

ATKINSON, S., Adjunct Faculty, Management, Orlando. B.B.A University of Mississippi, MBA University of Mississippi, D.B.A. Mississippi State University.

BAARMAND, M.M., Professor, Physics and Space Sciences. B.S., M.S., Ph.D., University of Wisconsin–Madison.

BABICH, M.W., Professor and Head, Chemistry, and Co-chair, Biochemistry Program. B.S., University of Wisconsin; Ph.D., University of Nevada.
BAGGS, R., Assistant Professor and Site Director, Melbourne. B.S., University of Pittsburgh; M.S., Ph.D., Florida Institute of Technology.

BAHR, G.S., Associate Professor, Psychology. B.S., M.S., Ph.D., Texas Christian University.

BAIKA, G.I., Assistant Professor, Humanities. B.A., M.A., Babes-Bolyai University, Romania; Ph.D., University of Pittsburgh.

BAILEY, D., Adjunct Faculty, Humanities. B.A., Mount St. Paul College; M.A., Catholic University of America; Ph.D., Florida Institute of Technology. (Chaplain, Florida Institute of Technology United Campus Ministry)

BAKOSY, L.A., Professor, Physics and Space Sciences and Director, Maglev Lab. Diplom-Physiker, Dr rer nat., Rheinisches–Westfalische Technische Hochschule, Aachen, Germany.

BALOQA, M.H., Assistant Vice President, Institutional Compliance and Associate Professor, Chemistry. B.S., University of Tennessee–Martin; Ph.D., University of Illinois.

BARKER, M., Systems Librarian, Evans Library. B.A., M.L.S., Florida State University; M.S., Florida Institute of Technology.

BARKER, B.M., Associate Professor and Director, External Programs, College of Aeronautics. B.S., U.S. Military Academy; M.A., Ph.D., University of Oklahoma.

BARKER, M., Systems Librarian, Evans Library. B.A., M.L.S., Florida State University; M.S., Florida Institute of Technology.

BARRANTI, J.C., Assistant Professor and Director, Extended Studies Division, Nathan M. Bisk College of Business. B.A., Florida State University; MBA, California State University–Dominquez Hills; M.A., University of Oklahoma; Ed.D., Nova Southeastern University.

BATCHELDOR, D., Assistant Professor, Space Sciences and Director, Ortega Observatory. B.S., Ph.D., University of Herfordshire, U.K.

BATTAGLIA, P., Associate Professor, Management and Site Director, National Capital Region and Virtual Campus, Nathan M. Bisk College of Business. B.S., Canisius College; M.S., Butler University; D.B.A., Nova Southeastern University.

BAUGUS, B., Adjunct Faculty, Economics, Aberdeen. B.A., McDaniel College; MBA, Vanderbilt University.

BAUM, J.C., Professor, Physical Chemistry. B.A., Williams College; M.A., Ph.D., Princeton University.

BAWUAH, K., Adjunct Faculty, Fort Lee. B.A., Bethany College; MBA, M.A., Eastern Illinois University; Ph.D., Virginia Polytechnic Institute and State University.

BEAN, L.G., Professor, Accounting. B.S., Southwest Missouri State University; M.S., University of Tulsa; Ph.D., University of Arkansas.

BEARD, D.S., Adjunct Faculty, Aeronautics. B.S., University of South Florida.

BECKER, S.A., University Professor, Computer Sciences, Associate Dean, Research, Academic Online Program Chair, Nathan M. Bisk College of Business and Director, Center for Entrepreneurship and Small Business Development. B.S., MBA, St. Cloud State University; M.S., Ph.D., University of Maryland–College Park.

BECKER, J., Adjunct Faculty, Psychology. B.S., M.A., University of West Florida. (Circles of Care, Melbourne, Fla.)

BEGLEY, L., Adjunct Faculty. Management, Orlando. B.S. Rollins College; M.A., Webster University.

BELANGER, T.V., Professor, Environmental Science. B.S., Illinois State University; M.S., Ph.D., University of Florida.

BELYI, A., Adjunct Faculty, Communication. B.A., M.A., Moscow State University, Russia.

BERG, G.W., Adjunct Faculty, Management, Northeast. B.S., New Jersey Institute of Technology; M.S., Florida Institute of Technology. (P.E., PMP)

BERGERON, S.M., Adjunct Faculty, Management, Hampton Roads. B.A., University of Southern Mississippi; M.S., MBA, Florida Institute of Technology.

BERNARD, P.D., Instructor, English and ESL. B.S., Ohio State University; M.S., Nova Southeastern University.

BERNHARD, P.J., Associate Professor, Computer Sciences. B.A., State University of New York–Oswego; M.S., Ph.D., University at Albany (SUNY).

BERSOFF, D., Adjunct Faculty, Clinical Psychology. B.S., M.A., Ph.D., New York University; J.D., Yale University Law School. (Professor and Director, Law and Psychology Program, Hanneman University)

BETHEA, W., Adjunct Faculty, Psychology. B.A., Oakland University; M.S., M.Ed., Ed.D., Columbia University.

BETZ, A., Assistant Professor, Psychology. B.S., M.A., Western Michigan University; Ph.D., Utah State University.

BICE, W.S., Adjunct Faculty, Fort Lee. B.S., University of Illinois; MBA, University of Chicago; Ph.D., Virginia Commonwealth University.

BILLINGS, J.C., Adjunct Faculty, Management, Redstone. B.A., Lehigh University; MBA, Alabama A&M University; M.P.A., D.P.A., Nova Southeastern University.

BLAKEY, E.Q., Assistant Professor, Psychology. B.S., Lake Erie College; M.A., Drake University; Ph.D., Western Michigan University. (Behavior Analyst, Private Practice)

BLEAKLEY, A.M., Associate Professor, Civil Engineering. B.S., U.S. Military Academy; M.S., Massachusetts Institute of Technology. (Registered Professional Engineer)

BLEIS, D.S., Instructor and Director of Teacher Education, Science and Mathematics Education. B.S., M.S., Florida Institute of Technology.

BODT, B.A., Assistant Professor, Management, Aberdeen. B.S., University of Maryland–College Park; M.S., Ph.D., University of Delaware.

BONHOMME, M.S., Associate Vice President, Online Leading and Dean, Florida Tech University Online and University Professor, Management. B.A., Miami University; M.L.S., MBA, Indiana University; Ph.D., Purdue University.

BONHOMME JR., R.F., Deputy Chief Operating Officer and Professor, Business. B.S., M.B.A., Ed.D., Indiana University. (CPA)

BORENASER, M., Adjunct Faculty, Computer Information Systems, Melbourne and Spaceport. B.S., M.S., University of Arkansas; M.S., Florida Institute of Technology; Ph.D., University of Nevada.

BOSTATER JR., C.B., Associate Professor, Environmental Science and Physical Oceanography and Director, Center for Remote Sensing. B.S., M.S., American University; Ph.D., University of Delaware.

BOURNE, C.A., Adjunct Faculty, Aeronautics. B.S., University of Washington; M.S., Air Force Institute of Technology.

BOWERS, R.B., Assistant Vice President, Student Affairs and Dean of Students. B.A., Hampton University; M.Ed., University of Massachusetts–Amherst; Ed.D., Florida Institute of Technology.

BOY, G.A., University Professor, Aeronautics and Director, Human-Centered Design Institute. B.S., Institut National Polytechnique de Toulouse, France; M.S., Ph.D., Institut Supérieur de l'Aéronautique et de l'Espace, France.

BRAGDON, C.R., Vice President, Strategic Initiatives and Distinguished Research Professor. B.A., Westminster College; M.S., Michigan State University; Ph.D., University of Pennsylvania.

BREININGER, D.R., Research Faculty, Biological Sciences. Ph.D., University of Central Florida.

BREITLER, A.L., Adjunct Faculty, Computer Science, Patuxent. B.A., Florida State University; M.A., George Washington University; Ph.D., Catholic University.

BRENNER, J.R., Assistant Professor, Chemical Engineering. B.S., University of Delaware; M.S., Ph.D., University of Michigan.
CAROLINA STATE UNIVERSITY.

BRUCE, G., Assistant Professor, Applied Behavior Analysis. B.A., M.S., University of North Texas; Ed.D., University of West Virginia.

BRANT, J.A., Adjunct Faculty, Management, Virtual Campus. B.S., The Citadel; M.S., St. Mary's University; M.A., U.S. Naval War College; MBA, Golden Gate University; Ph.D., The Union Institute.

BRYANT, J.V., Adjunct Faculty, Accounting, National Capital Region. B.S., New Hampshire College; MBA, California State University—Hayward.

BUCAILLE, S., Assistant Professor, Electrical and Computer Engineering. Dip. Eng., Ecole Nationales des Ingenieurs Electriciens de Grenoble, France; M.S., Ph.D., Johns Hopkins University.

BUNKER, S., Adjunct Faculty, Nathan M. Bisk College of Business. B.A., University of New Hampshire; E.MBA, Florida Institute of Technology.

BUDD, J.A., Robert L. Long Professor of Ethics, Nathan M. Bisk College of Business. B.S., Georgetown University; M.A., J.D., University of San Diego; M.Phil., University of Oxford, U.K.; Ph.D., University of Bristol, U.K.

BURNS, W.J., Adjunct Faculty, Computer Information Systems. B.A., M.A., Catholic University of America; M.S., University of Maryland; MBA, University of Dallas; Ph.D., University of Maryland.

BUSH, M.B., Professor, Biological Sciences and Director (Interim), Institute for Biological and Biomedical Sciences. B.Sc., University of Hull, U.K.; M.S., Duke University; Ph.D., University of Hull, U.K.

CAI, J.H., Assistant Professor and Chair, Graduate Programs, College of Aeronautics. B.S., Auburn University; M.S., University of Northern Colorado; Ed.S., Ph.D., Florida Institute of Technology. (ATP)

Caldwell, S.P., Lieutenant Colonel, Professor and Head, Military Science. B.S., Bowling Green State University; M.A., Troy University.

Carra, M., Research Scientist, Physics and Space Sciences. B.S., M.S., University of Bucharest, Romania; Ph.D., Purdue University.

Carnes, H., Adjunct Faculty, Management, Orlando. B.A., Tulane University; PMBA Florida Institute of Technology.

Carroll, D.J., Associate Professor and Director, Graduate Programs, Biological Sciences. B.S., M.S., Auburn University; Ph.D., University of Connecticut.

Carroll, J.J., Adjunct Faculty, Management, Northeast. B.S.I.E., New Jersey Institute of Technology; MBA, Rutgers University; D.B.A., Nova Southeastern University. (CMA, CPA, New Jersey)

Carstens, D.S., Associate Professor, Management Information Systems and Academic Online Program Chair, Project Management, Nathan M. Bisk College of Business. B.S., University of Central Florida; MBA, Florida Institute of Technology; Ph.D., University of Central Florida.

Casler, J.G., Adjunct Faculty, Management, Patuxent. B.S., South Dakota State University; M.S., University of West Florida; Ph.D., North Dakota State University.

Cate, A.J., University President and Professor, Business. B.A., Rutgers University; M.U.P., New York University; Ph.D., University of Wisconsin—Madison. (FAICP)

Cerny, J.D., Adjunct Faculty, Management, Redstone. B.S., U.S. Military Academy; M.S., East Texas State University; D.P.A., Nova Southeastern University.

Chan, P.K., Associate Professor, Computer Sciences. B.S., Southwest Texas State University; M.S., Vanderbilt University; Ph.D., Columbia.

Chavez, E.T., Assistant Professor, Clinical Psychology. B.A., New York University; M.A., Ph.D., University at Buffalo (SUNY).

Chiao, S., Associate Professor, Meteorology. B.S., Chinese Culture University; M.S., National Central University, Taiwan; Ph.D., North Carolina State University.

Choi, Y., Assistant Professor, Mechanical Engineering. B.S., M.S., Seoul National University, Korea; Ph.D., Purdue University.

Chong, I., Assistant Professor, Psychology and Program Director, Scott Center for Autism Treatment. B.A., University of Manitoba, Canada; M.A., Ph.D., Western Michigan University. (Board Certified Behavior Analyst)

Ciccio, K., Adjunct Faculty, Management, Hampton Roads. B.A., Saint Leo College; M.S., Florida Institute of Technology.

Cirillo, F., Adjunct Faculty, Computer Information Systems, Melbourne. B.S., University of Bridgeport; M.S, Florida Institute of Technology; Ph.D., Nova Southeastern University.

Clark, A.M., Adjunct Faculty, Ocean Engineering. B.S., M.S., Florida Atlantic University; Ph.D., University of Hawaii. (Vice President, Harris Corporation)

Clary, S., Adjunct Faculty, Management, Orlando. B.S., University of Central Florida; M.S., Florida Institute of Technology.

Cleary, W.A., Adjunct Faculty, Ocean Engineering. B.S., Webb Institute of Naval Architecture and Marine Engineering. (Registered Professional Engineer)

Coleman, N.P., Adjunct Faculty, Management, Northeast. B.A., University of Virginia; M.A., Ph.D., Vanderbilt University.

Colletti, B.W., Adjunct Faculty, Statistics, National Capital Region. B.S., Arizona State University; M.S., Air Force Institute of Technology; Ph.D., University of Texas—Austin.

Collins, J.G., Adjunct Faculty, Engineering Systems. B.S., Rose-Hulman Institute of Technology; M.A., Indiana University; M.S., Florida Institute of Technology; Ph.D., Indiana University.

Collins, M., Adjunct Faculty, Management, Orlando. B.S., Florida Southern University; M.S., Florida Institute of Technology; Ph.D., Barry University.

Combs, C.L., Adjunct Faculty, Marine and Environmental Systems. B.S., University of Florida; M.S., Florida State University.

Converse, P.D., Associate Professor, Psychology. B.A., State University of New York—Froedonia; M.A., Ph.D., Michigan State University.

Cook, C., Associate Professor, Marketing, Nathan M. Bisk College of Business. B.A., Florida State University; MBA, Ft. Lauderdale College; Ph.D., Union Institute and University.

Cook, D.C., Collection Development Librarian, Evans Library. B.A., M.A., University of South Florida.

Cook, D.E., Professor and Head, Science and Mathematics Education. B.S., Southwest Texas State University; M.S., Oklahoma State University; Ph.D., University of Texas—Austin.

Cooksey, L.M., Adjunct Faculty, Management, Patuxent. B.S., University of Maryland; M.S., Florida Institute of Technology.

Cope, A.D., Adjunct Faculty, Civil Engineering. B.S., M.S., Clemson University; Ph.D., University of Florida. (Registered Professional Engineer)

Corbin, N., Adjunct Faculty, Management, Orlando. B.S., Iowa State University; J.D., Creighton University School of Law.

Cosenza, B.J., Professor, Civil Engineering. B.S., M.S., University of Pittsburgh; Ph.D., Texas A&M University. (Registered Professional Engineer)

Crandell, T.L., Adjunct Faculty, Electrical and Computer Engineering. B.S.E., M.S., Ph.D., University of South Florida.

Crooks, K.E., Associate Professor, Aviation Management. B.S., Pennsylvania State University; M.P.A., Golden Gate University; J.D., University of Florida.

Cross, J., Associate Professor, Business Administration and Site Director, Northeast. B.S., Monmouth University; MBA, Long Island University; D.B.A., Nova Southeastern University.
CUDMORE, B.A., Associate Professor, Marketing. B.A., Acadia University; MBA, Dalhousie University; Ph.D., University of South Carolina.

CUSICK, S.K., Associate Professor, Aviation Management and Aeronautics. B.S., J.D., University of Louisville; M.P.A., University of West Florida.

DANET, T., Adjunct Faculty, Computer Information Systems. B.S., University of Maryland; PMBA, Florida Institute of Technology; Ph.D., Nova Southeastern University.

DAVIS, C.A., Patron Access and Research Librarian, Evans Library. B.S., Northeastern University; M.L.S., University of South Florida.

DAVIS, B.H., Adjunct Faculty, Economics, National Capital Region. B.A., Kent State University; M.A., Akron State University; M.A., Ph.D., University of Pittsburgh.

DAWSON, D.W., Adjunct Faculty, Physics and Space Sciences. B.S., Georgia State University; M.S., Florida Institute of Technology.

DAY, D. Adjunct Faculty, Psychology. B.A., University of Central Florida; M.S., Psy.D., Florida Institute of Technology. (Private Practice, Tampa, Fla.)

DEATON, J.E., Professor and Director, Research, College of Aeronautics and Director, Center for Aviation Human Factors; and Professor, Engineering Systems. B.A., M.A., San Diego State University; Ph.D., The Catholic University of America.

DE FREISEE, D.E., Adjunct Faculty, Marine and Environmental Systems. B.S., University of Rhode Island; M.S., Ph.D., Florida Institute of Technology.

DELLINGER, D.L., Adjunct Faculty, Management, Hampton Roads. B.S., M.S., Florida State University.

DEMCHEN, J.C., Adjunct Faculty, Contract Management, National Capital Region. B.S., Accounting; M.S., Contract and Acquisition Management.

DENIGRIS III, J., Adjunct Faculty, Virtual Campus. B.S., Indiana University; MBA, Orlando College; Ph.D., Walden University.

DENIUS, M., Assistant Professor, Communication. B.A., University of Florida; M.A., University of Central Florida; M.F.A., Vermont College.

DICKINSON, A.F., Adjunct Faculty, Computer Science, Spaceport. B.S., M.S., Ph.D., University of Central Florida.

DIMASCIO, A.J., Adjunct Faculty, Program Management, National Capital Region. B.S., M.S., Drexel Institute of Technology; D.B.A., George Washington University.

DOBOS, J., Adjunct Faculty, Languages and Linguistics. B.A., Baldwin–Wallace College; M.S., Florida Institute of Technology.

DOSS, S.K., Assistant Professor, Marketing. B.S., Butler University; MBA, University of Notre Dame.

DOUGLAS, K., Adjunct Faculty, Management, Orlando. B.A., Sophia University; M.A., Chapman College; Ph.D., University of Florida.

DOYLE, C., Adjunct Faculty, Electrical Engineering, Patuxent. B.S., Oklahoma State University; M.S., University of Oklahoma; Ph.D., Southern Methodist University; J.D., Concord Law School.

DRISCOLL, P.J., Adjunct Faculty. B.S., U.S. Military Academy; M.S., Stanford University; Ph.D., Virginia Polytechnic Institute and State University.

DSHALALOW, J.H., Professor, Mathematical Sciences. M.S., Odessa National University, Ukraine; Dr. Sci., Berlin Technical University, Germany.

DUKE, D., Adjunct Faculty, Management, Orlando. B.S., B.A., Pennsylvania State University; M.A., Ohio University; MBA, Florida Institute of Technology; Ed.D., University of Central Florida/Florida Atlantic University.

DUNBAR, V., Instructor, Aeronautical Science. B.S., M.S., Indiana Statue University.

DUNN, P.G., Assistant Professor, Aeronautics and Chair, Flight Education Program. B.A., Borromeo College of Ohio; M.S., American University. (ATP)

DURRANCE, S.T., Professor, Physics and Space Sciences. B.S., M.S., California State University–Los Angeles; Ph.D., University of Colorado. (NASA Astronaut)

DUTTA, A.S., Associate Professor, Finance. B.S., University of Bombay, India; MBA, Wake Forest University; Ph.D., The University of Tennessee–Knoxville.

DWER, J.R., Professor, Physics and Space Sciences, Director, Geospace Physics Lab and President, Faculty Senate. B.S., University of California–Irvine; M.S., Ph.D., University of Chicago.

EARLES, S.K., Associate Professor, Electrical Engineering and Director, Microelectronics Lab. B.S., M.S., Ph.D., University of Florida.

EDKINS, V.A., Assistant Professor, Forensic Psychology. B.Sc., Brandon University, M.A., Ph.D., University of Kansas.

EDWARDS, H.H., Associate Professor, Communication and Chair, Undergraduate Communication Program. B.S., University of Florida; M.A., University of Wisconsin–Madison; Ph.D., University of Georgia.

ELMORE JR., R.T., Associate Professor, Psychology and Director, Clinical Training. B.A., M.Ed., University of Georgia; Ph.D., Georgia State University.

ELCHOUEMI A., Adjunct Faculty, Computer Information Systems, Melbourne. B.S., M.S. Alexandria University, Egypt; M.S., Ph.D., University of Louisiana–Lafayette.

ENGLE, T., Adjunct Faculty, Computer Information Systems, Melbourne. B.S., University of Alabama; M.S., Florida Institute of Technology.

EVANS, T., Adjunct Faculty, Psychology. B.S., M.S., Ph.D., Michigan State University.

EYRING III, W.E., Adjunct Faculty, Psychology. B.A., M.A., Loyola College; Psy.D., Florida Institute of Technology. (Circles of Care, Melbourne, Fla.)

FAZAL, Z., Instructor, Humanities and Communication. B.A., Smith College; M.S., Florida Institute of Technology.

FIEDLER, T.J., Associate Vice President, Federal Government Relations and Partnerships and Assistant Professor, Biological Sciences. B.S., M.S., Ph.D., University of Miami.

FINDLING, H., Adjunct Faculty, Computer Science, Orlando. B.S., University of Central Florida; M.S., Florida Institute of Technology.

FAUSNAUGH, C.J., Assistant Professor, Management. B.S., Goldey Beacon College; M.S., Widener University; Ph.D., University of Georgia.

FAZAL, Z., Instructor, Humanities and Communication. B.A., Smith College; M.S., Florida Institute of Technology.

FIEDLER, T.J., Associate Vice President, Federal Government Relations and Partnerships and Assistant Professor, Biological Sciences. B.S., M.S., Ph.D., University of Miami.

FINDLING, H., Adjunct Faculty, Computer Science, Orlando. B.S., University of Central Florida; M.S., Florida Institute of Technology.

FISHER, D.W., Adjunct Faculty, Civil Engineering and Construction. B.S., B.A., Michigan State University; J.D., University of Michigan. (Registered Professional Engineer)

FLEMING, D.C., Associate Professor, Aerospace Engineering. B.S., Massachusetts Institute of Technology; M.S., Ph.D., University of Maryland.

FLEMING, K.Y., Adjunct Faculty, Program Management, National Capital Region. B.S., University of Maryland; M.S., MBA, Florida Institute of Technology; D.M., University of Phoenix.

FOING, B., Adjunct Faculty, Physics and Space Sciences. B.S., M.S., Ph.D., Université de Paris, France.
FORD, R.A., Harris Professor of Computer Science for Assured Information and Director, Harris Institute for Assured Information. B.A., M.A., D.Phil., Queen's College, University of Oxford, U.K.

FOULKES, J.B., Adjunct Faculty, Management, National Capital Region. B.S., Dowling College; M.A., University at Buffalo (SUNY); M.S., George Washington University; M.A., Ph.D., University of California–Santa Barbara.

FOWLER, C.W., Adjunct Faculty, Fort Lee. B.S., U.S. Military Academy; M.S., Rensselaer Polytechnic Institute; M.S., Ph.D., Georgia Institute of Technology.

FREEMAN, W., Adjunct Faculty, Communication. B.A., University of Central Florida.

FRONGILLO, J.C., Assistant Professor and Academic Online Program Chair, Liberal Arts. B.A., University of New Mexico; M.A., Ph.D., Vanderbilt University.

FULTON, C.T., Professor, Mathematical Sciences. B.A., University of Redlands; M.S., University of Minnesota; D.Sc., Rheinisch–Westfaelische Technische Hochschule, Aachen, Germany.

FUNK, C.L., Instructor, Humanities and Director, Ruth Funk Center for Textile Arts. B.A., New College of Florida; M.A., Florida State University.

GABRENYA JR., W.K., Professor, Psychology. A.B., Ohio University; M.A., Ph.D., University of Missouri–Columbia.

GAFFNEY, M.G., Instructor, Aeronautical Science and Director, FIT Aviation LLC. B.S., Parks College of Engineering, Aviation and Technology, St. Louis University; MBA, University of Bridgeport. (ATP)

GALLAGHER, K.B., Associate Professor, Computer Sciences. B.A., Bucknell University; M.S., University of Michigan; Ph.D., University of Maryland.

GALLO, M.A., Associate Professor, Science and Mathematics Education. B.S., M.S.Ed., The College at Brockport (SUNY); M.S., Ph.D., Florida Institute of Technology.

GAMAYUNOV, K.V., Ph.D., Research Scientist, Physics and Space Sciences. M.S., Altai State University, Russia; Ph.D., Institute of Terrestrial Magnetism, Ionosphere and Radio Wave Propagation, Russian Academy of Sciences, Russia.

GEHLKEN, R., Adjunct Faculty, Logistics Management, National Capital Region. B.S., Bowie State College; M.S., Central Michigan University; M.S., Johns Hopkins University; D.P.A., Nova Southeastern University.

GENERAL, D., Adjunct Faculty, Management, Hampton Roads. B.S., Park University; M.S., University of Maryland University College.

GEORGE, D., Adjunct Faculty, Management, Patuxent. B.A. Washington College; M.S. George Washington University.

GERING, J.A., Instructor, Physics and Space Sciences and Director, Undergraduate Laboratories. B.S., University of Louisville; M.S., Indiana University.

GIBBS, K., Adjunct Faculty, Engineering Systems. B.S., Washington University; M.S., Ph.D., University of Illinois.

GIBSON, A.E., Adjunct Faculty, Management, Northeast. B.A., Denison University; M.S., Case Institute; Ph.D., Virginia Polytechnic Institute and State University.

GILL, J.A., Adjunct Faculty, Computer Science, Patuxent. B.S., University of West Florida; M.S., U.S. Naval Postgraduate School; Ph.D., University of London.

GILMORE JR., R.G., Adjunct Faculty, Oceanography. B.S., M.S., University of West Florida; Ph.D., Florida Institute of Technology.

GIRTON, W.T., Assistant Professor, Applied Mathematics. B.S., Oglesby University; M.S., University of Florida; Ph.D., Florida Institute of Technology.

GLASSMAN, T.S., Adjunct Faculty, Virtual Campus. B.A., St. Leo University; M.S., Florida Institute of Technology; Ph.D., Capella University.

GNANVO, K., Research Scientist, Physics and Space Sciences. B.S., Université de Bretagne Occidentale, France; M.S., Université de Rennes 1, France; Ph.D., Université de Bretagne Occidentale, France.

GORDON, S., Adjunct Faculty, Computer Sciences. Ph.D., University of Middlesex, U.K.

GORDON, V.G., Associate Professor, Mechanical Engineering, Patuxent. B.S., Auburn University; M.S., Ph.D., U.S. Naval Postgraduate School.

GRACE, M.S., Associate Professor, Biological Sciences and Director, Center for High Resolution Microscopy and Imaging. B.S., Georgia Institute of Technology; M.S., Ph.D., Emory University.

GRAHAM, K., Adjunct Faculty and Director, Campus Security. B.A., University of Pittsburgh; M.S., Geneva College.

GRIFFITH, R.L., Professor, Psychology. B.A., Youngstown State University; M.A., Ph.D., University of Akron.

GRIMWADE, J.E., Professor, Biological Sciences. B.A., Wellesley College; Ph.D., University at Buffalo (SUNY).

GROSS, J.S., Assistant Professor, Psychology. B.A., University of Florida; M.S., Ed.S., Florida State University; Ph.D., New York University.

GROSSMAN, B.G., Professor, Electrical and Computer Engineering. B.S., M.S., Ph.D., University of Illinois.

GULBRO, B.D., Adjunct Faculty, Management, Redstone. B.S., MBA, University of Alabama; D.B.A., Mississippi State University.

GUTIERREZ, H., Associate Professor, Mechanical Engineering and Co-director, Dynamic Systems and Controls Lab. B.S. (Mechanical Engineering), Pontificia Universidad Catolica del Peru, Peru; B.S. (Applied Mathematics), Universidad Peruana Cayetano Heredia, Peru; M.Eng., Ph.D., North Carolina State University. (Registered Professional Engineer)

GUTMAN, A., Professor, Psychology. B.A., Lehman College–City University of New York; M.A., Ph.D., Syracuse University.

GUVERDZIK, M., Adjunct Faculty, Mechanical and Aerospace Engineering. B.S., University of Anadolu, Turkey; M.S., Instanbul Technical University, Turkey; M.S., Ph.D., University of Missouri.

HADJILOGIOU, J., Professor, Electrical and Computer Engineering. B.S., M.S., Ph.D., Polytechnic Institute of Brooklyn. (Registered Professional Engineer)

HAM, F.M., Vice President, Research and Research Centers and Institutes, and Harris Professor, Electrical and Computer Engineering, College of Engineering. B.S., M.S., Ph.D., Iowa State University.

HAMMETT III, J.E., Adjunct Faculty, Management, Northeast. B.A., Drew University; M.S., Cornell University; Ed.D., Rutgers University.

HANES, R.R., Adjunct Faculty, Management, Hampton Roads and Virtual Campus. B.S., Kansas State University; M.S., Florida Institute of Technology.

HANISAK, M.D., Adjunct Faculty, Biological Sciences and Adjunct Professor, Oceanography. A.B., Rutgers University; M.S., Ph.D., University of Rhode Island.

HANKO, K.J., Adjunct Faculty, Northeast. B.A., Rutgers University; J.D., Western New England School of Law; L.L.M., New York University School of Law; M.A., Salve Regina University.

HANSROTE, R.W., Adjunct Faculty, Aeronautics. B.S., Kent State University; M.D., University of Nebraska.

HARPER JR., R.L., Professor, Management and Site Director, Spaceport, Nathan M. Bisk College of Business. B.S., University of Maryland; MBA, New Hampshire College; D.B.A., Nova Southeastern University.

HARRELL, T.H., Professor, Psychology and Director, Fatigue Management Institute. B.A., M.A., East Carolina University; Ph.D., University of Georgia.
HARRIS, J.M., Assistant Professor, English and Humanities. B.A., University of California–Santa Barbara; M.A., Ph.D., University of Washington.

HARRISON, G., Adjunct Faculty, Computer Science, Orlando. B.S., M.S., Ph.D., University of Florida.

HARTSON, M.J., Adjunct Faculty, Fort Lee. B.S., State University of New York–Oswego; M.Ed., Ed.D., College of William and Mary.

HARVEY, C.R., Assistant Professor, Applied Behavior Analysis. B.S., University of Florida; M.Ed., Vanderbilt University. (Board Certified Behavior Analyst)

HARVEY, M.T., Associate Professor, Applied Behavior Analysis. B.A., West Virginia University; M.A., Ph.D., University of Oregon. (Board Certified Behavior Analyst)

HASSMILLER, R.H., Adjunct Faculty, Management, Northeast. B.A., M.S., University of Miami; Ph.D., Florida State University.

HAWKINS, F., Adjunct Faculty, Management, Patuxent. B.S., University of Virginia; M.S., Pennsylvania State University; Ph.D., University of Maryland.

HECK, H.H., Associate Professor, Civil Engineering. B.S., University of Central Florida; M.S., Ph.D., University of Arkansas. (Registered Professional Engineer)

HEFFERNAN, G.M., Adjunct Faculty, Management, Patuxent. B.A., University of Dallas; M.A., Ph.D., George Mason University.

HEIM, F., Adjunct Faculty, Contract Management, National Capital Region. B.S., University of Richmond; M.S., Florida Institute of Technology.

HELMSTETTER, W.L., Director of Resources and Services, Evans Library. B.A., University at Buffalo (SUNY); M.L.I.S., University of South Florida.

HILL, J.L., Adjunct Faculty, Computer Science, Spaceport. B.S., B.A., University of Florida; M.S., Florida Institute of Technology.

HOBBS, H.L., Adjunct Faculty, Management, Redstone. B.S. Troy State University; M.S., Murray State University; Ph.D., Pacific Western University.

HOHLMANN, M., Associate Professor, Physics and Space Sciences. Diplom-Physiker, Rheinisch–Westfälische Technische Hochschule, Aachen, Germany; M.S., Purdue University; Ph.D., University of Chicago.

HOLLAND, S.D., Adjunct Faculty, Management, Hampton Roads. B.S., M.S., Virginia Polytechnic Institute and State University; Ph.D., North Carolina State University.

HOLTERT, N.C., Adjunct Faculty, Accounting, Aberdeen. B.S., M.S., University of Baltimore; Ph.D., George Washington University.

HOSBURGH, N.D., Document Delivery Librarian. B.A., Flagler College; M.L.I.S., University of Alabama.

HOWELL, L.W. JR., Adjunct Faculty, Management, Redstone. B.S., Florida Institute of Technology; Ph.D., Virginia Polytechnic Institute and State University.

HOWZE, S., Adjunct Faculty, Psychology. B.A., University of Florida; M.A., University of Central Florida; Psy.D., Florida Institute of Technology. (Private Practice)

HOY, C.M., Adjunct Faculty, Management, Northeast. B.A., Montclair State College; M.A., M.Ph., Ph.D., Columbia University.

HUTCHENSON, K., Adjunct Faculty, Physics and Space Sciences. B.S., Wofford College; M.S., University of South Carolina; Ph.D., Saint Louis University.

HSU, P.F., Professor and Head, Mechanical and Aerospace Engineering. B.S., National Taiwan University; M.S., University at Buffalo (SUNY); Ph.D., University of Texas–Austin.

INFANTINI, T.J., Instructor, Nathan M. Bisk College of Business. B.A., Florida International University; M.A., Florida Atlantic University.

IWATA, B., Adjunct Faculty, Psychology. B.A., Loyola College; M.S., Ph.D., Florida State University.

JACHEC, S.M., Assistant Professor, Ocean Engineering. M.S., Florida Institute of Technology; Ph.D., Stanford University. (Registered Professional Engineer)

JACKSON, D.E., Associate Professor, Mathematical Sciences. B.S., Ph.D., University of Utah.

JACOBSON, J., Adjunct Faculty, Psychology. B.S., Bates College; MBA, University of Denver; M.D., Eastern Virginia Medical School.

JENNINGS, P.A., Associate Professor, Chemical Engineering. B.S., Clarkson College; M.S., Ph.D., University of Illinois. (Registered Professional Engineer)

JOHNSON, K.B., Associate Professor, Environmental Sciences and Oceanography. B.S., Brigham Young University; Ph.D., University of Oregon.

JOHNSON, P.A., Adjunct Faculty, Management, Hampton Roads. B.A., Yale University; M.S., Ohio State University; M.S., Rutgers University.

JOHNSON, S., Adjunct Faulty, Computer Sciences, Melbourne. B.S., M.S., Florida Institute of Technology.

JONES, J., Associate Professor, Applied Mathematics. B.S., M.S., New Mexico Institute of Mining and Technology; Ph.D., University of Colorado–Denver.

JONES, L.R., Assistant Professor, Art History and Humanities. B.S., M.A., Arizona State University; Ph.D., Harvard University.

JONES, M.A., Instructor, Criminal Justice and Forensic Psychology; Director, Online Programs and Chair, Undergraduate Programs (CPLA); and Chair, Undergraduate Curriculum Committee. B.A., Warner Southern College; M.S., University of Alabama.

JONES, U.O., Instructor, Aviation Management. B.Eng., University of London, Imperial College; M.S., Florida Institute of Technology.

KACHMAN, N., Adjunct Faculty, Aerospace Engineering, Patuxent. B.S., M.S., Ph.D., University of Michigan.

KALAJAN, E.H., Professor, Civil Engineering and Associate Dean, College of Engineering. B.S., University of Maryland; M.S., Ph.D., University of Massachusetts. (Registered Professional Engineer)

KALMAN, W., Adjunct Faculty, Contract Management, National Capital Region. B.A., Farleigh-Dickinson University; J.D., George Mason University.

KANE, M., Adjunct Faculty, Procurement, Northeast. B.A., City University of New York: J.D., St. John’s Law School.

KANER, C., Professor, Computer Sciences and Director, Center for Software Testing, Education and Research. B.S., Brock University; J.D., Golden Gate University; Ph.D., McMaster University.

KASLOW, F., Adjunct Faculty, Clinical Psychology. Ph.D., Bryn Mawr College. (Florida Couples and Family Institute)

KASZA, T., Adjunct Faculty, Computer Information Systems, Melbourne. M.S., Budapest University of Technology and Economics; Hungary; Ph.D., Florida Institute of Technology.

KEELEY, S., Adjunct Faculty, Management, Hampton Roads. B.A., Baker University; MBA, Texas Technology University; Ph.D., Oklahoma State University.

KEEN, L., Adjunct Faculty, Virtual Campus. B.S., University of Miami; J.D., University of Florida.

KENNEL, M.B., Dean, College of Psychology and Liberal Arts and School of Psychology and Professor, Psychology. B.A., Thomas More College; M.A., Ph.D., Miami University.

KEPUSKA, V.Z., Associate Professor, Electrical and Computer Engineering. Dipl., University of Prishtina, Yugoslavia; M.S., Ph.D., Clemson University.
Khan, L.S., Information Services Librarian, Evans Library. B.S., University of Central Florida; M.L.I.S., University of South Florida.

Kiguradze, T.I., Associate Professor, Mathematical Sciences. B.S., M.S., Moscow State University, Russia; Ph.D., Tbilisi State University, Georgia.

Kirke, D.R., Associate Professor, Mechanical and Aerospace Engineering. B.S., Rensselaer Polytechnic Institute; M.S., Ph.D., Massachusetts Institute of Technology.

Klingner, M.B., Adjunct Faculty, Management, Patuxent. B.A., Hood College; M.S., Thunderbird American Graduate School of International Management; MBA, San Francisco State University; Ph.D., Capella University.

Knight, D.A., Associate Professor, Chemistry. B.Sc., Ph.D., University of St. Andrews, U.K.

Knoll, C.A., Professor, Applied Mathematics and Mathematics Education and Head, Applied Mathematics, School of Computing. B.A., University of Central Florida; M.S., Ph.D., Florida Institute of Technology.

Koksal, S., Professor and Head, Mathematical Sciences. B.S., M.S., Middle East Technical University, Turkey; Ph.D., Florida Institute of Technology.

Kostanic, I., Associate Professor, Electrical and Computer Engineering and Technical Director, Wireless Center of Excellence. B.S., University of Belgrade, Serbia; M.S., Florida Institute of Technology; Ph.D., University of Central Florida.

Koursaris, C., Adjunct Faculty, Computer Science, Orlando and Spaceport. B.S., Southern University; M.S., Ph.D., Florida Institute of Technology.

Kovats, J.J., Associate Professor, Mathematical Sciences. B.A., University of San Diego; M.A., University of Chicago; Ph.D., University of Minnesota.

Kozaits, S.L., Collection Management Librarian, Evans Library. B.S., Florida Institute of Technology; M.L.I.S., University of South Florida.

Kozaits, S.P., Professor and Head, Electrical and Computer Engineering. B.S., M.S., Ph.D., Wayne State University.

Krishnamurthy, R., Professor, Clinical Psychology. B.A., Bombay University, India; M.A., Appalachian State University; Psy.D., Virginia Consortium for Professional Psychology.

Kulonda, D.J., Professor, Management and Site Director, Orlando, Nathan M. Bisk College of Business. B.I.E., Kettering University; M.I.E., Cornell University; Ph.D., North Carolina State University. (Registered Professional Engineer)

Lail, B.A., Associate Professor, Electrical Engineering. B.S., Furman University; M.S., Ph.D., New Mexico State University.

Lang, C., Assistant Professor, Computer Sciences and Dean of Libraries. B.A., Mount St. Mary's College; M.A., Dominican College of San Rafael; M.A., Johns Hopkins University; M.S.L.S., Catholic University of America; D.P.A., University of Southern California.

Larochelle, P.M., Professor, Mechanical Engineering, Assistant Dean, Academics and Accreditation, College of Engineering and Director, Robotics and Spatial Systems Lab. B.S., University of California–San Diego; M.S., Ph.D., University of California–Irvine. (Registered Professional Engineer)

Lavelle, J.F., Assistant Professor, English and Humanities. B.A., M.A., University at Buffalo (SUNY); M.A., University of Central Florida; Ph.D., University of Louisiana–Lafayette.

Lawoo, M.J., Associate Professor and Program Chair, Applied Psychology. B.A., William Paterson University; M.A., Ph.D., Miami University.

Lazarus, S.M., Associate Professor, Meteorology. B.S., Florida State University; M.S., Ph.D., University of Oklahoma.

Leach, B., Assistant Professor, Communication. B.A., M.A., Ph.D., University of Central Florida.

Lebo, C.D., Adjunct Faculty, Management, National Capital Region. B.A., Indiana University of Pennsylvania; M.A., Hood College.

Ledford, G.D., Adjunct Faculty, Civil Engineering. B.S., M.S., University of South Florida. (Registered Professional Engineer)

Lee, T., Assistant Professor, Aerospace Engineering. B.S., M.S., Seoul National University, Korea; M.S., Ph.D., University of Michigan.

Leoneard, A.C., Professor, Biological Sciences. B.S., Baldwin–Wallace College; Ph.D., University at Buffalo (SUNY).

Leslie, F.R., Adjunct Faculty, Environmental Science and Ocean Engineering. B.S., Tri-State University; M.S., Florida Institute of Technology.

Lester, R.A., Adjunct Faculty, Management, Redstone. B.S., University of North Alabama; M.A., University of Alabama; Ph.D., University of Mississippi.

Levine, E.L., Adjunct Faculty, Psychology. B.S., Brooklyn College; Ph.D., New York University.

Lewis, K.W., Adjunct Faculty, Fort Lee. B.A., Hampton Institute; M.Ed., University of Pittsburgh; Ph.D., Florida State University.

Lin, J., Professor, Biological Sciences and Director, Institute for Marine Research and Vero Beach Marine Lab. B.S., Xiamen University, China; M.S., Rutgers University; Ph.D., University of North Carolina–Chapel Hill.

Lindeman, K.C., Adjunct Faculty, Marine and Environmental Systems. B.S., Florida Institute of Technology; M.S., Universidad de Puerto Rico; Ph.D., University of Miami.

Liu, N., Assistant Professor, Physics and Space Sciences. B.S., M.S., Zhejiang University, China; Ph.D., The Pennsylvania State University.

Locurcio, R.V., Professor, Civil Engineering and Director, Construction Management Program. B.S., U.S. Military Academy; M.S., Purdue University. (Registered Professional Engineer)

Long, G.D., Adjunct Faculty, Computer Science, Patuxent. B.S., Massachusetts Institute of Technology; M.S., Ph.D., University of Maryland.

Long, J.M., Assistant Professor, Mechanical Engineering, Patuxent. B.S., M.S., Ph.D., Johns Hopkins University.

Lonsberry, M.W., Adjunct Faculty, Contracts and Business Law, Redstone. B.B.A., University of Arkansas-Monticello; J.D., South Texas College of Law.

Loomis, R., Adjunct Faculty, Orlando. B.S., Michigan State University; M.S., Ph.D., Texas A&M University.

Lopez, J.V., Adjunct Faculty, Biological Sciences. B.S., Georgia Institute of Technology; M.S., Florida State University; Ph.D., George Mason University.

Ludwig, H., Adjunct Faculty, Electrical Engineering, Orlando. B.A., Rice University; M.S., Ph.D., Northwestern University.

Machin, M. Adjunct Faculty. Management, Orlando. B.S. University of Puerto Rico, Mpace Seattle University.

Maddron, C., Adjunct Faculty, Management, Patuxent. B.S., Park College; MBA, Southeastern University; C.A.S., Thunderbird American Graduate School of International Management; Ph.D., Capella University.

Mahoney, M., Adjunct Faculty, Computer Science. Ph.D., Florida Institute of Technology.

Major, J.R., Adjunct Faculty, Management, Hampton Roads. B.A., Saint Leo University; MBA, Averett University; M.S., Florida Institute of Technology.

Maley, S., Adjunct Faculty, Aerospace Engineering, Patuxent. B.S., University of Massachusetts; M.S., Ph.D., Purdue University.

Manley, T.R., Professor, Management. B.S., U.S. Naval Academy; M.S., Ph.D., Rensselaer Polytechnic Institute.

Mantovani, J.G., Adjunct Faculty, Physics and Space Sciences. B.S., University of Dayton; M.S., Ph.D., Clemson University.
MARCINKOWSKI, T.J., Associate Professor and Program Chair, Environmental Education, Science and Mathematics Education. B.A., St. Lawrence University; M.S., Ph.D., Southern Illinois University.

MARIN, G.A., Professor, Computer Sciences. B.S., Wake Forest University; M.A.M., Ph.D., North Carolina State University.

MARSHALL, D.D., Adjunct Faculty, Management, Redstone. B.S., M.S., University of Tennessee; M.A., MBA, Ph.D., University of Alabama–Huntsville.

MARTIN, J., Adjunct Faculty, Mechanical and Aerospace Engineering. B.S., Marquette University; M.S., Ph.D., University of Illinois.

MARTIN, P., Adjunct Faculty, Physics and Space Sciences. B.S., University of Wisconsin–Stevens Point; M.S., Ph.D., Florida Institute of Technology.

MARTINEZ-DIAZ, J., Associate Professor, Psychology and Chair, Behavior Analysis Programs. B.A., University of Miami; M.A., Ph.D., West Virginia University. (Board Certified Behavior Analyst)

MASHBURN, T., Adjunct Faculty, Mechanical and Aerospace Engineering. B.S., University of Florida; M.S., Ph.D., Purdue University.

MASSEY, W.H., Adjunct Faculty, Fort Lee. B.S., University of Richmond; M.S.B., Virginia Commonwealth University. (CPA)

MATTOX, B., Adjunct Faculty, Electrical Engineering, Orlando. B.S., M.S., Ph.D., University of Florida.

MAUL, G.A., Professor and Head, Marine and Environmental Systems. B.S., State University of New York–Maritime College; Ph.D., University of Miami.

MAVOR, T.P., Adjunct Faculty, Mechanical Engineering, Patuxent. B.S., M.S., Worcester Polytechnic Institute; Ph.D., University of Delaware.

MAZO, K., Adjunct Faculty, Humanities. M.S., Florida Institute of Technology.

MAZZONE, P.V., Adjunct Faculty, Physical Education. B.S., Frostburg State College; M.A., University of Central Florida.

MCCAIN, J.W., Adjunct Faculty, Management, Redstone. B.S.E., B.S., M.S., Ph.D., University of Alabama–Huntsville.

MCCAMPBELL, A.S., Associate Professor, Management and Site Director, Aberdeen, Nathan M. Bisk College of Business. B.S., MBA, University of Baltimore; D.B.A., Nova Southeastern University.

MCCAY, M.H., Research Professor, Mechanical and Aerospace Engineering and Director, National Center for Hydrogen Research. B.S., M.S., Florida State University; Ph.D., University of Florida.

MCCAY, T.D., Executive Vice President and Chief Operating Officer and Professor, Aerospace Engineering and Physics. B.S., M.S., Ph.D., Auburn University.

MCELYEA, R.D., Adjunct Faculty, Management, Redstone. B.S., Athens State College; MBA, M.S., Florida Institute of Technology.

MEANS, T.B., Adjunct Faculty, Management, Patuxent. B.S., Ph.D., Pennsylvania State University; M.Ed., Vanderbilt University.

MEHL, C., Adjunct Faculty, Engineering, Patuxent. B.S., Ph.D., University of Colorado–Denver.

MEKY, M., Adjunct Faculty, Computer Information Systems, Melbourne. B.S., M.S., Alexandria University, Egypt; Ph.D., City University of New York.

MENENDEZ, A., Adjunct Faculty, Space Systems, Spaceport. B.S., Florida Institute of Technology; M.S., Massachusetts Institute of Technology.

MENEZES, R., Associate Professor, Computer Sciences. B.S., University of Fortaleza, Brazil; M.S., State University of Campinas, Brazil; Ph.D., University of York, U.K.

MERCERET, F.J., Adjunct Faculty, Meteorology. B.A., Ph.D., Johns Hopkins University; J.D., University of Miami. (NASA/KSC)

MICHEL, J., Adjunct Faculty, Applied Behavior Analysis. B.A., M.A., Ph.D., University of California–Los Angeles.

MILLER, G., Adjunct Faculty, Management, Patuxent. B.S., University of Florida; M.S., Florida Institute of Technology.

MITCHELL, J.C., Associate Professor, Space Systems, Spaceport. B.S., Massachusetts Institute of Technology; M.S., Florida Institute of Technology.

MITRA, D., Professor, Computer Sciences. M.S., Ph.D., Indian Institute of Technology–Kharagpur, India; Ph.D., University of Louisiana–Lafayette.

MITRA, K., Professor, Mechanical Engineering, Program Director, Biomedical Engineering and Co-director, Laser, Optics and Instrumentation Lab. B.S., Jadavpur University, India; M.S., Ph.D., Polytechnic University–Brooklyn.

MONARI, L.M., Adjunct Faculty, Civil Engineering. B.S., City College of New York; M.A., Brooklyn College–City University of New York; MBA, Florida Institute of Technology; Ph.D., Queens College–City University of New York.

MONTAGNE, E., Adjunct Faculty, Computer Science, Orlando. B.S., Universidad Central de Venezuela, M.S., Queens University Central de Venezuela.

MOODY, M. Adjunct Faculty, Management, Orlando. B.A. University of Texas, MBA Florida Institute of Technology; Ph.D. Nova Southeastern University.

MOORE, L.K., Research Faculty, Biological Sciences. B.S., M.S., Arizona State University; Ph.D., University of Arizona.

MOOZOUN, S., Adjunct Faculty, Management, Aberdeen. B.S., M.S., West Virginia University.

MOORE, G., Adjunct Faculty, Management, Patuxent. B.S., M.S., Northeastern University.

MUEHLIG, J., Adjunct Faculty, Management, Northeast. B.A., Columbia College; M.S., Columbia Graduate School of Business; Ph.D., New York University.

MULLER, L.H., Adjunct Faculty, Management, National Capital Region. B.A., Dennison University; M.S., University of Southern California; Ed.D., George Washington University.

MULLIGAN, K.P., Professor and Program Chair, Clinical Psychology. B.A., Providence College; M.S., Southern Connecticut State University; Psy.D., University of Denver.

MURSHID, S.H., Professor, Electrical Engineering. B.E., N.E.D. University, Pakistan; M.S., Ph.D., Florida Institute of Technology.

MUTSCHLER, D.W., Assistant Professor, Computer Science, Patuxent. B.A., Rutgers University; M.Engr., Pennsylvania State University; M.S., Ph.D., Temple University.

MYERS, B.A., Adjunct Faculty, Electrical Engineering. B.S., Purdue University; M.A., Virginia Polytechnic Institute and State University; Ph.D., Florida Institute of Technology.

MYERS, K.J., Adjunct Faculty, Space Systems, Spaceport. B.S., University of Evansville; M.S., Wright State University; M.D., Indiana University.

NELMES, K., Adjunct Faculty, Humanities and Communication. B.A., M.Phil., Memorial University of Newfoundland.

NELSON, G.L., Vice President, Academic Affairs, Professor, Chemistry and Director (Interim), Institute for Materials Science and Nanotechnology. B.S., University of Nevada–Reno; M.S., Ph.D., Yale University.

NESNAS, N.A., Associate Professor, Chemistry and Biochemistry. B.S., Manhattan College; M.A., M.Phil., Ph.D., Columbia University.

NEWCOMBE, R.A., Instructor and Director, Academic Support Center. B.B.A., Temple University; MBA, University of Central Florida; M.L.S., Drexel University.

NEWELL, W. Adjunct Faculty, Management, Orlando. B.S. U.S. Military Academy, M.S. Michigan State University, MSSM University of Southern California.
NEWMAN, J.R., Professor, Computer Sciences, Chief Information Officer (Interim), Assistant Dean, College of Engineering and Director, School of Computing. B.A., M.S., University of Utah; Ph.D., University of Southwestern Louisiana.

NIEBUHR, R.E., Dean, Nathan M. Bisk College of Business and Professor, Business. B.S., University of Cincinnati; M.S., Ph.D., Ohio State University.

NORTHCUTT, W.R., Adjunct Faculty, Business Law. B.A., University of Maryland; J.D.; Florida State University College of Law.

NOVAK, M.J., Associate Professor, Chemistry. B.S., James Madison University; Ph.D., Florida State University.

NUNEZ, J. Adjunct Faculty, Engineering, Patuxent. B.S., University of Florida; M.S., Ph.D., University of Central Florida.

OLSON, J.A., Associate Professor, Chemistry. B.S., Ph.D., University of Wisconsin.

OLUSEYI, H.M., Assistant Professor, Physics and Space Sciences. B.S., Tougaloo College; M.S., Ph.D., Stanford University.

ONYJEKWE, O., Instructor, Applied Mathematics. B.S., New England College; M.S., Florida Institute of Technology.

OSTENDORP, A., Adjunct Faculty, Space Systems, Spaceport. B.S., New Mexico State University. M.S., Florida Institute of Technology.

OSWALT, T.D., Professor and Head, Physics and Space Sciences and Director, Southeastern Association for Research in Astronomy. B.A., Indiana University; Ph.D., Ohio State University.

OTERO, L.D., Assistant Professor, Engineering Systems. B.S., M.S., Florida Institute of Technology; Ph.D., University of South Florida.

OYMAN, K., Associate Professor, Aviation Management and Associate Dean, College of Aeronautics. B.S., Istanbul University, Turkey; M.S., Central Missouri State University; Ph.D., Anadolu University, Turkey.

PANDIT, A., Professor and Head, Civil Engineering. B.S., Indian Institute of Technology—Kanpur, India; M.S., Ph.D., Clemson University. (Registered Professional Engineer)

PAPERN, R., Adjunct Faculty, Biological Sciences. B.S., New York Institute of Technology; M.S., Adelphi University; Ph.D., University of Delaware.

PARENTEAU, B.C., Adjunct Faculty, Computer Information Systems, Melbourne. B.A., MBA, University of Florida; M.A., M.S., Ph.D., Florida International University.

PARKER, M.V., Adjunct Faculty, Management, National Capital Region. B.S., University of Maryland; M.S., Florida Institute of Technology; MBA, University of Maryland.

PARKS, C.R., Adjunct Faculty, Meteorology. B.S., Texas A&M University; M.S., University of Oklahoma. (ACTA Inc.)

PARLA-PALUMBO, J.A., Assistant Professor, Languages and Linguistics. B.A., University at Albany (SUNY); M.A., M.Ed., Ph.D., University at Buffalo (SUNY).

PATTERSON, G.M., Professor, History and Humanities. B.S., Northwestern University; Ph.D., University of California—Los Angeles.

PATTON, J.R., Associate Professor, Business and Academic Online Program Chair, Management, Nathan M. Bisk College of Business. B.A., University of New Hampshire; M.P.A., New York University; D.B.A., Nova Southeastern University.

PAULILLO, B., Associate Professor, Psychology, Clinical Director, Scott Center for Autism Treatment and Director, Community Psychological Services. B.S., Stockton State University; Psy.D., Florida Institute of Technology.

PEERY, B.L., Adjunct Faculty, Fort Lee, Norfolk General Hospital, School of Professional Nursing; B.B.A., University of Memphis; M.S., Ph.D., Virginia Commonwealth University.

PERDIGAO, L., Associate Professor, English and Humanities. B.A., M.A., Boston College; Ph.D., Northeastern University.

PERERA, K., Professor, Mathematical Sciences. B.S., Stevens Institute of Technology; Ph.D., Courant Institute, New York University.

PERLMAN, E.S., Associate Professor, Physics and Space Sciences. A.B., Occidental College; Ph.D., University of Colorado.

PETER, A.M., Assistant Professor, Systems Engineering. B.S., M.S., Ph.D., University of Florida.

PETERSEN, T.G., Assistant Professor, Communication. B.A., Bethany Lutheran College; M.A., University of South Florida; Ph.D., University of Florida.

PETRALIA, R., Instruction Librarian, Evans Library. B.A., University of Central Florida; M.S., Florida State University.

PIEPLLOW, T.C., Adjunct Faculty, Management, Redstone. B.S., B.A., Northwestern University; MBA, Florida Institute of Technology; D.P.A., Nova Southeastern University.

PINELLI, J.P., Professor, Civil Engineering and Director, Wind and Hurricane Impacts Research Lab. B.S., University of Buenos Aires, Argentina; M.S., Ph.D., Georgia Institute of Technology. (Registered Professional Engineer)

PIPERNO, D.R., Adjunct Faculty, Biological Sciences. B.A., Rutgers University; Ph.D., Temple University.

PLATT, D., Assistant Professor and Program Chair, Space Systems, Spaceport. B.S., Florida Institute of Technology; M.S., Western Connecticut State University.

POCH, T., Assistant Professor, Clinical Psychology. B.A., Knox College; M.A., M.A.L.D., Tufts University; Psy.D., University of Denver.

POLSON, C.D., Associate Professor, Biological Sciences and Co-chair, Biochemistry. B.S., M.S., Central Michigan University; Ph.D., Florida Institute of Technology.

POZO DEFERNANDEZ, M.E., Assistant Professor, Chemical Engineering. B.S., Universidad Simon Bolivar, Venezuela; M.S., Ph.D., Cornell University.

PRICE, T.E., Adjunct Faculty, Virtual Campus. B.S., Penn State University; MBA, Ph.D., University of South Florida.

PRINCIPLE, E.L., Research Faculty, Physics and Space Sciences. B.S., M.S., University of Central Florida; Ph.D., The Pennsylvania State University.

PRITCHARD, J., Instructor, Psychology. B.S., M.S., Florida Institute of Technology.

PRUETT, C.L., Assistant Professor, Biological Sciences. B.S., Southwest Baptist University; M.S., Texas A&M; Ph.D., University of Alaska.

RAHAL, Ahmad, Adjunct Faculty, Orlando. B.S., Florida Institute of Technology, M.S., Florida Institute of Technology, Ph.D. University of Central Florida.

RANEY, TW., Assistant Professor, Management and Site Director, Fort Lee, Nathan M. Bisk College of Business. B.S., Bucknell University; MBA, Georgia State University; J.D., Case Western Reserve University.

RASSOUL, H.K., Dean, College of Science and Professor, Physics and Space Sciences. B.S., University of Tehran, Iran; M.S., University of Texas—Austin; Ph.D., University of Texas—Dallas.

RATHBUN, W.R., Adjunct Faculty, Management, Redstone. B.A., Bowling Green State University; J.D., University of Toledo College of Law.

READ, M.F., Adjunct Faculty, Aeronautics. B.S., Embry-Riddle Aeronautical University; M.S., University of Southern Mississippi.

REGENSBURGER, R., Adjunct Faculty, Orlando. B.S., Embry Riddle Aeronautical University; M.S., Florida Institute of Technology.

REICHARD, R.P., Adjunct Faculty, Ocean Engineering and Oceanography. B.S., M.S., Ph.D., University of New Hampshire.

RESIO, D.T., Adjunct Faculty, Environmental Science and Oceanography. B.A., M.A., Ph.D., University of Virginia.
RESNICK, R., Adjunct Faculty, Computer Information Systems, Melbourne. B.S., M.S., Florida Institute of Technology.

REYNOLDS, J.K., Instructor and Academic Program Chair, Criminal Justice. B.A., M.P.A., University of Central Florida.

RHINE, R.M., Adjunct Faculty, Management, Patuxent. B.A., Bethany College; MBA, Hood College; Ph.D., West Virginia University.

RIBEIRO, E., Associate Professor, Computer Sciences. B.Sc., Universidade Católica do Salvador, Brazil; M.Sc., Universidade de São Carlos, Brazil; Ph.D., University of York, U.K.

RICHARD, E.M., Assistant Professor, Psychology. B.A., M.A., Ph.D., Louisiana State University.

RICHARDSON III, T.R., Professor and Senior Associate Dean, Accreditation, Extended Studies Division, Nathan M. Bisk College of Business. B.S., University of Pittsburgh; E.MBA, Rochester Institute of Technology; Ed.D., University of Pennsylvania.

RICHE, M.A., Adjunct Faculty, Biological Sciences. B.S., Humboldt State University; M.S., Purdue University; Ph.D., Michigan State University.

ROFFER, M.A., Adjunct Faculty, Marine and Environmental Systems. Ph.D., University of Miami.

ROKACH, J., Professor, Chemistry and Director, Claude Pepper Institute for Aging and Therapeutic Research. M.Sc., The Hebrew University, Israel; Ph.D., Weizmann Institute of Science, Israel.

ROMANS, A.C., Catalog and Electronic Resources Librarian, Evans Library. B.A., M.L.I.S., University of South Florida.

ROSENBLUM, M., Adjunct Faculty, Management, Orlando. B.A., University of South Florida; M.S., Florida Institute of Technology.

ROSIENI, A.M., Assistant Professor and Assistant Head, Humanities and Communication and Chair, Languages and Linguistics. B.A., Wesleyan University; Ph.D., Northwestern University.

ROSSER, T.G., Assistant Professor, Aeronautics and Director, Aviation Studies Division. B.S., Embry-Riddle Aeronautical University; MBA, Marywood University.

ROWLAND, L., Adjunct Faculty, English. B.A., Brown University; M.F.A., California State University–Fresno.

RUANE, M.J., Instructor, History and Humanities. B.A., McGill University, Canada; M.A., University of Delaware.

RUSOVIĆ, R., Assistant Professor, Aerospace Engineering. Eng. Dip., Polytechnic Institute of Bucharest, Romania; M.S., Pennsylvania State University; Ph.D., Virginia Polytechnic Institute and State University.

RUSSELL, A.J., Adjunct Faculty, Management, Redstone. B.S., University of Mississippi; M.S., Texas A&M University; Ph.D., University of South Africa.

RUSSELL, J. Adjunct Faculty, Management, Patuxent. B.S. Northeastern University; B.S. University of Maryland; M.S. University of Maryland University College.

RYBICKI, G.C., Adjunct Faculty, Marine and Environmental Systems. MBA, Cleveland State University; B.S., M.S., Ph.D., Case Western Reserve University.

SAAKIAN, A., Adjunct Faculty, Electrical Engineering, Patuxent. B.S., Yerevan Polytechnical Institute; M.S., Institute of Telecommunications; Ph.D., University of Massachusetts–Lowell.

SAHOO, P.K., Associate Professor, Ocean Engineering. B.Tech., Indian Institute of Technology, India; Ph.D., University of Bostock, Germany.

SALE, M.L., Associate Professor and Academic Program Chair, Accounting and Finance, Nathan M. Bisk College of Business. B.S., Louisiana Tech University; M.A., University of Florida; D.B.A., Louisiana Tech University.

SALLEY, C.D., Adjunct Faculty, Management, Redstone. M.A., Duke University; Ph.D., Georgia State University.

SAWYER, B.M., Assistant Professor, Physics and Space Sciences. B.S., M.S., Florida Institute of Technology.

SCHALLER, R.R., Adjunct Faculty, Management, Patuxent. MBA, Loyola College; Ph.D. (ABD), George Mason University.

SCHULTHESS, D.R., Adjunct Faculty, Space Systems, Spaceport. B.S., Brigham-Young University; M.S., Florida Institute of Technology.

SCOTT, M.K., Instructor, Computer Sciences. B.S., Florida State University; M.S., Old Dominion University.

SCOTT, W.E., Dean, College of Aeronautics and Professor, Aeronautics. B.A., Florida State University; M.S., Naval Postgraduate School. (NASA Astronaut)

SEN, S.K., Professor, Mathematical Sciences. B.S., University of Calcutta, India; M.S., Ph.D., Indian Institute of Science.

SEPRI, A.H., Research Librarian, Evans Library. B.A., University of Connecticut; M.L.S., University of Rhode Island.

SEPRI, P., Associate Professor, Aerospace Engineering. B.S., M.S., Polytechnic Institute of Brooklyn; Ph.D., University of California–San Diego.

SHAHIKH, M.A., Professor and Head, Engineering Systems. B.S., University of Bombay, India; M.S., Kansas State University; Ph.D., University of Illinois.

SHARAF-ELDEEN, Y.I., Associate Professor, Mechanical Engineering and Co-director, Dynamic Systems and Controls Lab. B.Sc., M.Sc., Alexandria University, Egypt; Ph.D. (Thermal-fluid Systems) Ohio State University; Ph.D. (Mechanical Engineering) Oklahoma State University. (Registered Professional Engineer)

SHARMA, V.K., Professor, Chemistry. B.Sc., M.Sc., University of Delhi, India; M. Tech., Indian Institute of Technology–New Delhi; Ph.D., University of Miami, Rosenstiel School of Marine and Atmospheric Sciences.

SHAW, M.D., Associate Professor, Applied Mathematics. B.A., Indiana University; M.S., Ball State University; Ph.D., Florida Institute of Technology.

SHAYKHIAN, G.A., Adjunct Faculty, Computer Information Systems, Orlando. B.S., M.S., University of Central Florida; Ph.D., Florida Institute of Technology.

SIEGFELDT, D.V., Associate Professor, Management and Director, Hampton Roads, Nathan M. Bisk College of Business. Ph.D., Old Dominion University.

SILAGHI, M.C., Assistant Professor, Computer Sciences. B.Eng., Technical University of Cluj–Napoca, Romania; Ph.D, Swiss Federal Institute of Technology–Lausanne, Switzerland.

SINDE, B.C., Professor, Biological Sciences. B.S., Eckerd College; M.S., Ph.D., University of Georgia.

SKEWELLINGS, E., Poet Laureate and University Professor of Humanities. B.A., University of Massachusetts; Ph.D., University of Iowa.

SLOWE, S., Adjunct Faculty, Information Systems, Orlando. B.S., Georgetown College; M.S., Florida Institute of Technology; Ph.D. Capella University.
SLOTKIN, M.H., Associate Professor, Economics. B.A., Rollins College; Ph.D., University of North Carolina–Chapel Hill.

SMAIL, L.M., Adjunct Faculty, Management, Hampton Roads. B.A., MBA, College of William and Mary; J.D., Washington and Lee University.

SMITH, F.J., Adjunct Faculty, Management, Hampton Roads. B.S., M.S., Ph.D., Illinois Institute of Technology.

SMITH, N.P., Adjunct Faculty, Environmental Sciences and Oceanography. B.S., M.S., Ph.D., University of Wisconsin. (Research Scientist, Harbor Branch Oceanographic Institution)

SMITH, T.S., Adjunct Faculty, Management, Patuxent. B.S., University of Maryland; M.S., University of Southern California.

SOHN, M.L., Professor, Chemistry and Chair, Graduate Council. B.A., Queens College; Ph.D., Lehigh University.

SOHN, Y., Assistant Professor, Communication. B.A., Ewha Woman's University, South Korea; M.A., Florida State University; Ph.D., University of California, Los Angeles.

SPEAKER, E.E., Adjunct Faculty, Space Systems, Spaceport. B.S., U.S. Naval Academy; M.S., Massachusetts Institute of Technology; Ph.D., University of Michigan.

STALLO, M. Adjunct Faculty, Meteorology. B.S., Northern Illinois University; M.S., University of Oklahoma.

STALLO, M. Adjunct Faculty, Forensic Psychology. B.S., University of Cincinnati; M.A., University of Texas–Dallas.

STEINEMANN, A.C., Adjunct Faculty, Virtual Campus. B.A., Agnes Scott College; M.A., Yale University; M.L.S., University of South Florida.

STELEN, G.W., Adjunct Faculty, Management, Orlando. B.S., Virginia Polytechnic Institute and State University; M.B.A., Florida Institute of Technology.

STEVEN, J.H., Adjunct Faculty, Environmental Science. B.S., University of Wisconsin–Madison; M.A., University of Akron.

STEWART, D., Adjunct Faculty, Computer Science. J.D., George Washington University.

STAFFA, R.G., Adjunct Professor, Business. B.S., University of Florida; M.S., Ph.D., University of California, San Diego.

STRAHMAKHAR, A., Adjunct Faculty, Electrical Engineering, Patuxent. B.E., Regional Engineering College (India); M.S., University of Chicago; Ph.D., University of Iowa.

SUBASI, M.M., Assistant Professor, Mathematical Sciences. B.S., M.S., Cukurova University, Turkey; Ph.D., Rutgers University.

SUBRAMANIAN, C.S., Adjunct Faculty, Electrical Engineering, Patuxent. B.S., Regional Engineering College (India); M.S., University of Chicago; Ph.D., University of Iowa.

SUBRAMANIAN, C.S., Professor, Aerospace Engineering and Co-director, Laser, Optics and Instrumentation Lab. B.E.M.E., Bangalore University, India; M.E.A.E., Indian Institute of Science; Ph.D., University of Newcastle, Australia. (Professional Engineer, U.K.)

SULLIVAN, R.L., University Professor, Electrical and Computer Engineering, and Director, Institute for Energy Systems. B.S., M.S., Ph.D., University of Florida.

SWAIN, G.W.J., Professor, Ocean Engineering and Oceanography, and Director, Center for Corrosion and Biofouling Control. B.Sc., London University; M.Sc., Ph.D., Southampton University, U.K.

SWAIN, H.M., Adjunct Faculty, Biological Sciences. B.Sc., Ph.D., University of Newcastle upon Tyne, U.K.

SYNAKIEWICZ, M.R., Adjunct Faculty, Space Systems, Spaceport. B.A.S., M.A.S., Embry–Riddle Aeronautical University.

TANKERSLEY, R.A., Professor, Biological Sciences. B.A., Wake Forest University; M.S., Florida State University; Ph.D., Wake Forest University.

TAYLOR, A.E., Assistant Professor, Psychology and Director, Counseling and Psychological Services (CAPS). B.A., University of North Carolina–Charlotte; M.S., Psy.D., Florida Institute of Technology.

TAYLOR, J.A., Professor, History and Humanities, and Head, Humanities and Communication. B.A., M.A., University of South Florida; Ph.D., Florida State University.

TENALE, G.B., Professor, Mathematical Sciences. B.S., M.S., Ph.D., Sri Satya Sai Institute of Higher Learning, India.

THANDA, A., Assistant Professor, Communication. B.A., Stony Brook University (SUNY); M.A., Ph.D., Purdue University.

THOMAS, J., Adjunct Faculty, Management, Hampton Roads. B.A., Saint Leo University; MBA, Florida Institute of Technology.

THOMAS, J.J., Adjunct Faculty, Chemical Engineering. B.S., M.S., Boston College.

THOMPSON, A.D., Adjunct Faculty, Virtual Campus. B.A., J.D., University of Hawai‘i–Manoa.

THOSTESON, E.D., Adjunct Faculty, Ocean Engineering and Oceanography. B.S., West Virginia Wesleyan College; M.S., Ph.D., University of Florida. (Registered Professional Engineer)

TILLEY, S.R., Professor, Computer Sciences and Business. B.Sc., Concordia University; M.Sc., Ph.D., University of Victoria.

TOLLIVER, P.T., Adjunct Faculty, Fort Lee. B.S., Mid-Continent University; M.S., Murray State University; Ph.D., Capella University.

TOMADAKIS, M.M., Associate Professor and Head (Interim), Chemical Engineering. Diploma in Chemical Engineering, Aristotelian University, Greece; M.Sc., Ph.D., University of Rochester.

TOWNSEND, G.W., Adjunct Faculty, Management, Patuxent. B.S., Virginia Polytechnic Institute and State University; MBA, M.S., Florida Institute of Technology.

TREFRY, J.H., Professor, Environmental Science and Oceanography. A.B., Syracuse University; M.S., Ph.D., Texas A&M University.

TRUEBLOOD, R.P., Adjunct Faculty, Computer Science, Redstone. B.S., Auburn University; M.S., University of Tennessee; Ph.D., Virginia Polytechnic Institute and State University.

TSE, D., Adjunct Faculty, Mechanical and Aerospace Engineering. B.S., University of California–San Diego; M.S., California State University–Los Angeles; Ph.D, Florida Institute of Technology.

TURINGAN, R.G., Professor, Biological Sciences. B.S., University of the Philippines; M.S., University of Rhode Island; Ph.D., University of Puerto Rico.

TURNER, K.A., Director of Instruction, Evans Library. B.S., University of South Florida; M.L.I.S., University of Oklahoma.

TURNER, N.E., Associate Professor, Physics and Space Sciences. B.A., Rice University; M.S., Ph.D., University of Colorado–Boulder.

TURNER, R.L., Associate Professor, Associate Head and Director, Undergraduate Programs, Biological Sciences. B.A., M.S., University of Maine; Ph.D., University of South Florida.

TYQUIENGO, J., Major and Assistant Professor, Military Science. B.S., United States Military Academy.

UDPKE, G.W., Adjunct Faculty, Management, Orlando. B.S., Virginia Military School; M.S., MBA, Florida Institute of Technology.
UTLEY, T., Associate Professor, Aeronautics. B.S., University of Utah; M.A., Webster College; M.S., Texas A&M University; Ph.D., Florida Institute of Technology.

VAMOSI, A.R., Associate Professor, Economics and Associate Dean, Academic Programs, Nathan M. Bisk College of Business. B.Comm., M.A., University of Alberta, Canada; Ph.D., University of North Carolina-Chapel Hill.

VANDREW, S.L., Adjunct Faculty, Management, Patuxent. B.S., U.S. Military Academy; M.S., Ph.D., Colorado School of Mines.

VAN SICKLE, K.S., Assistant Professor, Community Health and Executive Director, Brevard Healthcare Forum. B.S., Indiana University; M.S., DePaul University; Psy.D., Florida Institute of Technology.

VAN VOESIK, R., Professor, Biological Sciences. B.Sc., University of Queensland, Australia; Ph.D., James Cook University, Australia.

VARGAS, E., Adjunct Faculty, Applied Behavior Analysis. Ph.D., University of New Mexico.

VINCENZI, D.A., Adjunct Faculty, Aeronautics. B.S., Ph.D., University of Central Florida.

VIRNSTEIN, R.W., Adjunct Faculty, Oceanography. B.A., Johns Hopkins University; M.A., University of South Florida; Ph.D., College of William and Mary. (Consultant)

VODOPIYANOV, I., Research Scientist, Physics and Space Sciences. M.S., Saint Petersburg Polytechnical University, Russia; Ph.D., V.G. Kholpin Radium Institute, Russia.

VROMAN, H., Adjunct Faculty, Management, Aberdeen. B.A., M.A., Northern Illinois University; Ph.D., University of Iowa.

VU, B., Adjunct Faculty, Mechanical and Aerospace Engineering. B.S., University of California–Davis; M.S., University of Alabama–Huntsville; Ph.D. Mississippi State University.

WAITE, T.D., Dean, College of Engineering and F.W. Olin Professor of Engineering, Civil Engineering. B.S., M.S., Northeastern University; M.S., Ph.D., Harvard University. (Registered Professional Engineer)

WALLACE, F., Instructor, Communication. B.A., Indiana State University; M.Ed., Indiana University.

WANG, K.G., Associate Professor, Physics and Space Sciences. B.S., Jiangxi Education Institute, China; M.S., Sichuan University, China; Ph.D., Chinese Academy of Sciences, China.

WARE, J., Adjunct Faculty, Management, Orlando. B.S., Florida A&M University; M.S., Florida State University; Ph.D., University of Central Florida.

WARKOMSKI, F.J., Associate Professor, Psychology and Executive Director, Scott Center for Autism Treatment. B.S., East Stroudsburg State College; M.S., Bloomsburg State College; Ed.D., Temple University. (Board Certified Behavior Analyst)

WEaver, L.E., President Emeritus and Professor, Electrical Engineering. B.S., University of Missouri; M.S., Southern Methodist University; Ph.D., Purdue University.

WEBBE, F.M., Professor, Psychology. B.A., M.S., Ph.D., University of Florida.

WEBBER, R., Instruction Librarian, Evans Library. B.A., Northwestern Oklahoma State University; M.L.I.S., University of Oklahoma.

WEBSTER, B., Assistant Professor, Engineering Systems. B.S., Pennsylvania State University; M.S., Ph.D., Florida Institute of Technology.

WEDDLE, D.B., Associate Professor, Computer Science, Patuxent. B.A., M.S., University of Virginia; M.S., Ph.D., George Washington University.

WEHMSCHULTE, R.J., Associate Professor, Chemistry. Vordiplom, Ruhr-Universitat Bochum; Diplom, Dr.reer.nat., Westfalische Wilhelms Universitat, Munster, Germany.

WEISFELD, S., Adjunct Faculty, Computer Information Systems, Orlando. B.S. University of Central Florida, M.S. Florida Institute of Technology.
EMERITUS FACULTY

ABDO, G.E., Professor Emeritus, Mathematical Sciences. B.A., Rice University; M.S., Ph.D., Texas A&M University.

BAKER, J.N., Professor Emeritus, Psychology. B.S., M.S., Ph.D., University of Illinois.

BEACH, C.D., Professor Emeritus, Electrical Engineering. B.S.E.E., B.S. (Business Administration), University of Colorado; M.S.E.E., New York University; Ph.D., University of Colorado.

BLATT, J.H., Professor Emeritus, Physics and Space Sciences. B.A., Harvard College; M.S., Ph.D., University of Alabama.

BOWMAN, T.E., Professor Emeritus, Mechanical Engineering. B.S., M.S., California Institute of Technology; Ph.D., Northwestern University.

BUONI, F.B., Professor Emeritus, Computer Sciences, Engineering Management and Operations Research. A.B., Rutgers University; M.S., Ph.D., Ohio State University.

CALLAHAN, J.P., Professor Emeritus, Management. B.A., La Verne College; M.P.A., University of Oklahoma; Ed.S., Florida Atlantic University; Ed.D., University of Central Florida.

CHLOATSA, N.W., Assistant Professor Emeritus, Extended Studies Division, Nathan M. Bisk College of Business. B.S., St. Francis College; M.E.A., George Washington University; M.P.A., University of Southern California.
PATTERSON, J.D., Professor Emeritus, Physics and Space Sciences. A.B., University of Missouri; M.S., University of Chicago; Ph.D., University of Kansas.

PEAKE, T.H., Professor Emeritus, Psychology. A.B., Northwest Missouri State University; M.A., University of Missouri; Ph.D., University of Memphis.

PHILPOT, C.L., Professor Emeritus, Psychology. B.A., Western Maryland College; M.S., University of Central Florida; Psy.D., Florida Institute of Technology.

REVAY, A.W., JR., Professor Emeritus, Electrical and Computer Engineering. B.S., M.S., Ph.D., University of Pittsburgh.

RICHMOND, R.F., Professor Emeritus, Science/Mathematics Education. A.B., Marshall University; M.Ed., University of Georgia; Ed.S., Florida Institute of Technology.

RUSSELL, J.M., Professor Emeritus, Aerospace Engineering. B.S. (Aerospace Engineering), B.S. (Mathematics), M.S., Sc.D., Massachusetts Institute of Technology. (Registered Professional Engineer)

RUSSELL, J.M., Professor Emeritus, Aerospace Engineering. B.S. (Aerospace Engineering), B.S. (Mathematics), M.S., Sc.D., Massachusetts Institute of Technology. (Registered Professional Engineer)

SAINSBURY, J.C., Professor Emeritus, Ocean Engineering. B.Sc., Kings College, Newcastle upon Tyne, U.K.; Ph.D., University of Southampton. U.K.

SANDERS, T.J., Professor Emeritus, Electrical Engineering. B.S., M.S., Ph.D., Purdue University.

SCHWALBE, J.W., Professor Emeritus, Civil Engineering. B.S., The Cooper Union; M.S., University of Connecticut.

SEARLE, F.R., Professor Emeritus, Management. B.E.E., Georgia Institute of Technology; M.S., D.B.A., Florida State University.

SHEHATAHAYE, M.M., Professor Emeritus, Electrical and Computer Engineering. B.S.E.E., Georgia Institute of Technology; M.S.E.E., Ph.D., Mississippi State University.

STORRS, E.E., Professor Emerita, Biological Sciences. B.A., Amherst College; M.S. New York University; Ph.D., University of Texas.

STILES, F.R., Professor Emerita, Management. B.E.E., Georgia Institute of Technology; M.S., D.B.A., Florida Institute of Technology.

WEIGEL, R.C., Associate Professor Emeritus, Biological Sciences. B.A., University of Delaware; B.S., George Washington University; M.S., Ph.D., University of Maryland.

ZBOROWSKI, A., Professor Emeritus, Ocean Engineering. B.Sc., M.Sc., Ph.D., D.Sc., Gdansk University of Technology.

Florida Tech University Online

Calendars are subject to change. For more current information see http://online.fit.edu/calendar.php.

Fall 1 – 2011

June 23 First day to register for Fall 1 – 2011
Aug. 5 Last day to file a Petition to Graduate for Fall 1 – 2011
Aug. 17 Last day to register for Fall 1 – 2011 without late fee
Aug. 18 First day to register for Fall 2 – 2011
Aug. 24 Last day for Fall 1 – 2011 confirmation of tuition or financial aid
Aug. 24 Last day to register for Fall 1 – 2011 with late fee
Aug. 29 CLASSES BEGIN (Monday)
Sept. 4 Last day to withdraw from a class with full refund
Sept. 5 Holiday (Labor Day)
Sept. 30 Last day to file a Petition to Graduate for Fall 2 – 2011
Oct. 9 Last day to withdraw from a class with a W and no refund
Oct. 10 Holiday (Columbus Day)
Oct. 20 Last day for admissions eligibility for Fall 1 – 2011
Oct. 23 Last day of classes (Sunday)

Fall 2 – 2011

Aug. 18 First day to register for Fall 2 – 2011
Sept. 30 Last day to file a Petition to Graduate for Fall 2 – 2011
Oct. 12 Last day to register for Fall 2 – 2011 without late fee
Oct. 13 First day to register for Spring 1 – 2012
Oct. 19 Last day for Fall 2 – 2011 confirmation of tuition or financial aid
Oct. 19 Last day to register for Fall 2 – 2011 with late fee
Oct. 24 CLASSES BEGIN (Monday)
Oct. 30 Last day to withdraw from a class with full refund
Nov. 11 Holiday (Veterans Day)
Nov. 24 Holiday (Thanksgiving)
Nov. 25 Last day to file a Petition to Graduate for Spring 1 – 2012
Dec. 4 Last day to withdraw from a class with a W and no refund
Dec. 10 Fall Commencement Exercises
Dec. 15 Last day for admissions eligibility for Fall 2 – 2011
Dec. 18 Last day of classes (Sunday)

Spring 1 – 2012

Oct. 13 First day to register for Spring 1 – 2012
Nov. 25 Last day to file a Petition to Graduate for Spring 1 – 2012
Dec. 28 Last day to register for Spring 1 – 2012 without late fee
Dec. 29 First day to register for Spring 2 – 2012
Jan. 4 Last day for Spring 1–2012 confirmation of tuition or financial aid
Jan. 4 Last day to register for Spring 1 – 2012 with late fee
Jan. 9 CLASSES BEGIN (Monday)
Jan. 15 Last day to withdraw from a class with full refund
Jan. 16 Holiday (Martin Luther King Jr. Day)
Feb. 10 Last day to file a Petition to Graduate for Spring 2 – 2012
Feb. 19 Last day to withdraw from a class with a W and no refund
Feb. 20 Holiday (Presidents Day)
March 1 Last day for admissions eligibility for Spring 1 – 2012
March 4 Last day of classes (Sunday)

Spring 2 – 2012

Dec. 29 First day to register for Spring 2 – 2012
Feb. 10 Last day to file a Petition to Graduate for Spring 2 – 2012
Feb. 22 Last day to register for Spring 2 – 2012 without late fee
Feb. 23 First day to register for Summer 1 – 2012
Feb. 29 Last day for Spring 2 – 2012 confirmation of tuition or financial aid
Feb. 29 Last day to register for Spring 2 – 2012 with late fee
March 5 CLASSES BEGIN (Monday)
March 11 Last day to withdraw from a class with full refund
April 6 Last day to file a Petition to Graduate for Summer 1 – 2012
April 15 Last day to withdraw from a class with a W and no refund
April 19 First day to register for Summer 2 – 2012
April 26 Last day for admissions eligibility for Spring 2 – 2012
April 29 Last day of classes (Sunday)
May 6 Spring Commencement Exercises

Summer 1 – 2012

Feb. 23 First day to register for Summer 1 – 2012
April 6 Last day to file a Petition to Graduate for Summer 1 – 2012
April 18 Last day to register for Summer 1 – 2012 without late fee
April 19 First day to register for Summer 2 – 2012
April 25 Last day for Summer 1 – 2012 confirmation of tuition or financial aid
April 25 Last day to register for Summer 1 – 2012 with late fee
April 30 CLASSES BEGIN (Monday)
May 6  Last day to withdraw from a class with full refund
May 28  Holiday (Memorial Day)
June 1  Last day to Petition to Graduate for Summer 2 – 2012
June 10 Last day to withdraw from a class with a W and no refund
June 21 Last day for admissions eligibility for Summer 1 – 2012
June 23  First day to register for Fall 1 – 2012
June 24  Last day of classes (Sunday)

Summer 2 – 2012
April 19 First day to register for Summer 2 – 2012
June 1  Last day to Petition to Graduate for Summer 2 – 2012
June 20 Last day to register for Summer 2 – 2012 without late fee
June 21 First day to register for Fall 1 – 2012
June 27 Last day for Summer 2 – 2012 confirmation of tuition or financial aid
June 27 Last day to register for Summer 2 – 2012 with late fee
July 2  CLASSES BEGIN (Tuesday)
July 4  Holiday (Independence Day)
July 8  Last day to withdraw from a class with full refund
Aug. 3  Last day to file a Petition to Graduate for Fall 1 – 2012
Aug. 12 Last day to withdraw from a class with a W and no refund
Aug. 23  Last day for admissions eligibility for Summer 2 – 2012
Aug. 26  Last day of classes (Sunday)

Fall 1 – 2012
June 21 First day to register for Fall 1 – 2012
Aug. 3  Last day to file a Petition to Graduate for Fall 1 – 2012
Aug. 15 Last day to register for Fall 1 – 2012 without late fee
Aug. 16 First day to register for Fall 2 – 2012
Aug. 22 Last day for Fall 1 – 2012 confirmation of tuition or financial aid
Aug. 22 Last day to register for Fall 1 – 2012 with late fee
Aug. 27 CLASSES BEGIN (Monday)
Sept. 2  Last day to withdraw from a class with full refund
Sept. 3  Holiday (Labor Day)
Sept. 28 Last day to file a Petition to Graduate for Fall 2 – 2012
Oct. 7  Last day to withdraw from a class with a W and no refund
Oct. 8  Holiday (Columbus Day)
Oct. 18  Last day for admissions eligibility for Fall 1 – 2012
Oct. 21  Last day of classes (Sunday)

Fall 2 – 2012
Aug. 16  First day to register for Fall 2 – 2012
Sept. 28  Last day to file a Petition to Graduate for Fall 2 – 2012
Oct. 10 Last day to register for Fall 2 – 2012 without late fee
Oct. 11 First day to register for Spring 1 – 2013
Oct. 17 Last day for Fall 2 – 2012 confirmation of tuition or financial aid
Oct. 17 Last day to register for Fall 2 – 2012 with late fee
Oct. 22 CLASSES BEGIN (Monday)
Oct. 28 Last day to withdraw from a class with full refund
Nov. 12 Holiday (Veterans Day) Observed
Nov. 22 Holiday (Thanksgiving)
Nov. 23 Last day to file a Petition to Graduate for Spring 1 – 2013
Dec. 2  Last day to withdraw from a class with a W and no refund
Dec. 8  Fall Commencement Exercises
Dec. 13  Last day for admissions eligibility for Fall 2 – 2012
Dec. 16  Last day of classes (Sunday)
